Social Change and Development in India

Textbook in Sociology for Class XII
Social Change and Development in India

Textbook in Sociology for Class XII
The National Curriculum Framework (NCF), 2005, recommends that children’s life at school must be linked to their life outside the school. This principle marks a departure from the legacy of bookish learning which continues to shape our system and causes a gap between the school, home and community. The syllabi and textbooks developed on the basis of NCF signify an attempt to implement this basic idea. They also attempt to discourage rote learning and the maintenance of sharp boundaries between different subject areas. We hope these measures will take us significantly further in the direction of a child-centred system of education outlined in the National Policy on Education (1986).

The success of this effort depends on the steps that school principals and teachers will take to encourage children to reflect on their own learning and to pursue imaginative activities and questions. We must recognise that, given space, time and freedom, children generate new knowledge by engaging with the information passed on to them by adults. Treating the prescribed textbook as the sole basis of examination is one of the key reasons why other resources and sites of learning are ignored. Inculcating creativity and initiative is possible if we perceive and treat children as participants in learning, not as receivers of a fixed body of knowledge.

These aims imply considerable change in school routines and mode of functioning. Flexibility in the daily time-table is as necessary as rigour in implementing the annual calendar so that the required number of teaching days are actually devoted to teaching. The methods used for teaching and evaluation will also determine how effective this textbook proves in making children’s life at school a happy experience, rather than a source of stress or boredom. Syllabus designers have tried to address the problem of curricular burden by restructuring and reorienting knowledge at different stages with greater consideration for child psychology and the time available for teaching. The textbook attempts to enhance this endeavour by giving higher priority and space to opportunities for contemplation and wondering, discussion in small groups, and activities requiring hands-on experience.

The National Council of Educational Research and Training (NCERT) appreciates the hard work done by the textbook development committee responsible for this textbook. We wish to thank the Chairperson of the advisory group in Social Sciences, Professor Hari Vasudevan, and the Chief Advisor for this textbook, Professor Yogendra Singh, for guiding the work of this committee. Several teachers contributed to the development of this textbook; we are grateful to their principals for making this possible. We are indebted to the institutions and organisations which have generously permitted us to draw upon their resources, material and personnel. We are especially grateful to the members of the National Monitoring Committee, appointed by the Department of Secondary and Higher Education,
Ministry of Human Resource Development under the Chairpersonship of Professor Mrinal Miri and Professor G.P. Deshpande, for their valuable time and contribution. As an organisation committed to systemic reform and continuous improvement in the quality of its products, NCERT welcomes comments and suggestions which will enable us to undertake further revision and refinement.

New Delhi

Director  
National Council of Educational Research and Training
TEXTBOOK DEVELOPMENT COMMITTEE

CHAIRPERSON, ADVISORY COMMITTEE FOR SOCIAL SCIENCES TEXTBOOK AT THE HIGHER SECONDARY LEVEL
Hari Vasudevan, Professor, Department of History, University of Calcutta, Kolkata

CHIEF ADVISOR
Yogendra Singh, Emeritus Professor, Centre for the Study of Social Systems, Jawaharlal Nehru University, New Delhi

ADVISORS
Maitrayee Chaudhuri, Professor, Centre for the Study of Social Systems, Jawaharlal Nehru University, New Delhi
Satish Deshpande, Professor, Department of Sociology, Delhi School of Economics, University of Delhi, Delhi

MEMBERS
Amita Baviskar, Professor, Institute of Economic Growth, University of Delhi, Delhi
Anjan Ghosh, Fellow, Centre for Studies in Social Sciences, Kolkata
Carol Upadhya, Visiting Associate Fellow, National Institute of Advanced Studies, Bengaluru
Khamyambam Indira, Assistant Professor, North-east Regional Institution of Education, Shillong
Kushal Deb, Associate Professor, Department of Sociology, Indian Institute of Technology, Mumbai
Latha Govindan Nair, Ex-teacher of Sociology, Sardar Patel Vidyalaya, New Delhi
Nandini Sunder, Professor, Department of Sociology, Delhi School of Economics, University of Delhi, Delhi
Nitya Ramakrishnan, Advocate, Delhi High Court, Delhi
Sarika Chandrawanshi Saju, Assistant Professor, Regional Institution of Education, Bhopal
Tasong Newmei, Assistant Professor, North-east Regional Institution of Education, Shillong

MEMBER-COORDINATOR
Manju Bhatt, Professor, Department of Education in Social Sciences, NCERT, New Delhi
ACKNOWLEDGEMENTS

The many debts incurred in meeting the challenge of producing this textbook under a very tight schedule are gratefully acknowledged. First of all, thanks to all the colleagues of the editorial team and members who took out time from their other commitments to devote their energies to this task.

Yogendra Singh, Professor Emeritus, Jawaharlal Nehru University, New Delhi, and our Chief Advisor, was, as always, a pillar of support who gave us the confidence to proceed. He and Krishna Kumar, Professor and Director, NCERT, provided the abhay hastha that enabled and guided our collective efforts. Savita Sinha, Professor and Head, Department of Education in Social Sciences and Humanities, lent unstinting support. Shveta Uppal, Chief Editor, NCERT, not only facilitated our work but encouraged us to aim higher.

We are thankful to Seema Banerjee, PGT, Sociology, Laxman Public School, New Delhi; Dev N. Pathak, Bluebell International School, New Delhi; Nirmla Choudhary, PGT, Sociology, Nehru Adarsh Senior Secondary School, Delhi; and Kiran Sharma, PGT, Sociology, Government Boys Senior Secondary School, President Estate, New Delhi, for providing their feedback and inputs.

Special thanks are due to Shweta Rao, who took on the challenge of designing the book and made it possible to realise our efforts. Her contributions are visible in every page. The Council also acknowledges the support and contribution of Jesna Jayachandran, Research Scholar at the Centre for the Study of Social Systems, Jawaharlal Nehru University, New Delhi.

Our special thanks to Satish Saberwal, Professor, and N. Jayaram, Professor, members and of the Monitoring Committee from whose meticulous comments and suggestions we benefited enormously.

Finally, we are grateful to all the institutions and individuals who allowed us to use materials from their publications, each of which is acknowledged in the text. The NCERT is specially grateful to R.K. Laxman for allowing us to use his cartoons; Malavika Karlekar for the use of photographs from her book, Visualising Indian Women 1875–1947, published by Oxford University Press, New Delhi; Radha Kumar for letting us use visuals from her book, The History of Doing: An Illustrated Account of Movements for Women’s Rights and Feminism in India 1800–1990; and Ravi Agarwal for his collection of photographs. We have also used some material and photographs from India Today, Outlook and Frontline, The Times of India, The Hindu and Hindustan Times. The Council thanks the authors, copyright holders and publishers of these materials. The NCERT gratefully acknowledges the library of the Rail Museum, Chanakya Puri, New Delhi; Y.K. Gupta and R.C. Das of the Central Institute of Educational Technology, NCERT, New Delhi.

The Council acknowledges the contribution of Nazia Khan, DTP Operator, Dinesh Kumar, In-charge, Computer Station, and Rishi Pal Singh, Senior Proofreader, NCERT, in shaping this textbook. We are grateful to the Publication Department, NCERT, for all its support.
You have already gone through the earlier book. You are therefore familiar with the spirit of the National Curriculum Framework that the textbooks seek to communicate. The idea is to move away from learning by rote. The effort in the textbook is to give “higher priority and space to opportunities for contemplation and wondering, discussion in small groups, and activities requiring hands-on experience”. Every effort has been made to connect the subject matter to the contemporary social environment and to the everyday life of the child. Towards making this possible, we have boxes that draw from reports in newspapers, magazines, brief extracts from fiction, government reports, apart from the many examples to the everyday life of children. The exercises and activities in the textbook are, therefore, an essential part of the book. An effort has also been made to draw from sociological writings to give a flavour of sociological research.

This has been a challenging, sometimes difficult task for us and we are aware that your suggestions will go a long way to improve upon it. Please do write to us at the following address – The Head, Department of Education in Social Sciences and Humanities, NCERT, Sri Aurobindo Marg, New Delhi 110 016. Or you can send e-mail to: ncertsociologytexts@gmail.com. We look forward to your responses, and specially your critical comments, including suggestions for improvements in the layout and format. We promise to acknowledge all useful suggestions in the next edition of the textbook.

THE CONSTITUTION OF INDIA
PREAMBLE

WE, THE PEOPLE OF INDIA, having solemnly resolved to constitute India into a [SOVEREIGN SOCIALIST SECULAR DEMOCRATIC REPUBLIC] and to secure to all its citizens:

JUSTICE, social, economic and political;
LIBERTY of thought, expression, belief, faith and worship;
EQUALITY of status and of opportunity; and to promote among them all
FRATERNITY assuring the dignity of the individual and the [unity and integrity of the Nation];

IN OUR CONSTITUENT ASSEMBLY this twenty-sixth day of November, 1949 do HEREBY ADOPT, ENACT AND GIVE TO OURSELVES THIS CONSTITUTION.

1. Subs. by the Constitution (Forty-second Amendment) Act, 1976, Sec.2, for "Sovereign Democratic Republic" (w.e.f. 3.1.1977)
2. Subs. by the Constitution (Forty-second Amendment) Act, 1976, Sec.2, for "Unity of the Nation" (w.e.f. 3.1.1977)
Structural Change
Understanding the present usually involves some grasp of its past. This holds true probably as much for an individual or social group as for an entire country such as India. India has a long and rich history. While knowing about its past in ancient and medieval times is very important, its colonial experience is particularly significant for comprehending modern India. This is not just because many modern ideas and institutions reached India through colonialism. It is also because such an exposure to modern ideas was contradictory or paradoxical. For example Indians in the colonial period read about western liberalism and freedom. Yet they lived under a western, colonial rule that denied Indians liberty and freedom. It is contradictions of this kind that shaped many of the structural and cultural changes that chapter 1 and 2 looks at.

As the next few chapters shall show, our social reform and nationalist movement, our laws, our political life and our Constitution, our industry and agriculture, our cities and our villages have been shaped by our paradoxical experience with colonialism. This has had lasting implications for our specific experience with modernity. The following are just some of the many instances we face in our daily life.

We have a parliamentary and a legal system, a police and educational system built very much on the British model. We drive on the left side of the road like the British. We have ‘bread-omlette’ and ‘cutlets’ as menu offered in many roadside eateries and canteens. A very popular manufacturer of biscuits, is actually named after Britain. Many school uniforms include neck-ties. We often admire the west and as often resent it. These are just some of the many and complex ways that British colonialism lives on in contemporary India.
Let us take the example of the English language to show how its impact has been many sided and paradoxical in India. This is not a matter about wrong spellings alone. English is not only widely used in India but we now have an impressive body of literary writings by Indians in English. This knowledge of English has given Indians an edge in the global market. But English continues to be a mark of privilege. Not knowing English is a disadvantage that tells in the job market. At the same time for those who were traditionally deprived of access to formal education such as the Dalits, knowledge of English may open doors of opportunities that were formerly closed.

In this chapter we focus on structural changes that colonialism brought in. We, therefore, need to shift from this broad impressionistic view to a clearer understanding of colonialism as a structure and system. Colonialism brought into being new political, economic and social structural changes. In this chapter we look at only two of these structural changes namely industrialisation and urbanisation. While the focus is on specific colonial context we also briefly touch on developments after independence.

All these structural changes were accompanied by cultural changes which, we look at in the next chapter. However any strict separation of the two is difficult. As you will see the structural changes are difficult to discuss without some mention of the cultural changes too.

Virtually English

Housewives and college students who know English take up plum assignments as online scorers in BPOs, writes K. Jeshi. It is a familiar classroom scene. The only unfamiliar thing is the setting. Computer screens turn blackboards and housewives take over as teachers to evaluate English essays written by non-English speaking students in Asia. All, at the click of the mouse. The encouraging comments given by the evaluators here motivate students in Japan, Korea and China to learn English.

Online education, the new wave in the BPO segment, is bringing cheer to those who want to earn a fast buck. All you need is a flair for English, creative skills, basic computer knowledge, the drive to go that extra mile and willingness to learn.

**Activity 1.1**

- Think of everyday objects, such as pieces of furniture or kinds of food, or phrases in Indian languages that may be traced to our past as a British colony.
- Identify a novel or short story or film or television serial in any Indian language that recounts the times of colonialism. Discuss its many dimensions.
- You must have seen a court scene in a film or television serial. Did you notice the procedures? Most are borrowed from the British system. Not too many years ago Indian judges wore wigs when in court. Find out where did this practice come from?
1.1 UNDERSTANDING COLONIALISM

At one level, colonialism simply means the establishment of rule by one country over another. In the modern period western colonialism has had the greatest impact. India’s past has been marked by the entry of numerous groups of people at different times who have established their rule over different parts of what constitutes modern India today. The impact of colonial rule is distinguishable from all other earlier rules because the changes it brought in were far-reaching and deep. History is full of examples of the annexation of foreign territory and the domination of weaker by stronger powers. Nevertheless, there is a vital difference between the empire building of pre-capitalist times and that of capitalist times. Apart from outright pillage, the pre-capitalist conquerors benefited from their domination by exacting a continuous flow of tribute. On the whole they did not interfere with the economic base. They simply took the tribute that was skimmed off the economic surplus that was produced traditionally in the subjugated areas. (Alavi and Shanin, 1982)

In contrast British colonialism which was based on a capitalist system directly interfered to ensure greatest profit and benefit to British capitalism. Every policy was geared towards the strengthening and expansion of British capitalism. For instance it changed the very laws of the land. It changed not just land ownership laws but decided even what crops ought to be grown and what ought not to be. It meddled with the manufacturing sector. It altered the way production and distribution of goods took place. It entered into the forests. It cleared trees and started tea plantations. It brought in Forest Acts that changed the lives of pastoralists. They were prevented from entering many forests that had earlier provided valuable forage for their cattle. The box carries a brief account of the impact of colonial forest policy in North-East India.
Colonialism also led to considerable movement of people. It led to movement of people from one part to another within India. For instance people from present day Jharkhand moved to Assam to work on the tea plantations. A newly emerging middle class particularly from the British Presidency regions of Bengal and Madras moved as government employees and professionals like doctors and lawyers moved to different parts of the country. People were carted in ships from India to work on other colonised lands in distant Asia, Africa and Americas. Many died on their way. Most could never return. Today many of their descendents are known as people of Indian origin.

To facilitate the smooth functioning of its rule, colonialism introduced a wide array of changes in every sphere, be it legal or cultural or architectural. Colonialism was a story apart in the very scale and intensity of the changes that it brought about. Some of these changes were deliberate while some took place in an unintended fashion. For example we saw how western education was introduced to create Indians who would manage British colonialism. Instead it led to the growth of a nationalist and anti-colonial consciousness.

This magnitude and depth of the structural changes that colonialism unleashed can be better grasped if we try and understand some basic features.
of capitalism. Capitalism is an economic system in which the means of production are privately owned and organised to accumulate profits within a market system. (We have already discussed the capitalist market in the first book – *Indian Society*.) Capitalism in the west emerged out of a complex process of European exploration of the rest of the world, its plunder of wealth and resources, an unprecedented growth of science and technology, its harnessing to industries and agriculture. What marked capitalism from the very beginning was its dynamism, its potential to grow, expand, innovate, use technology and labour in a way best assured to ensure greatest profit. What marked it too was its global nature. Western colonialism was inextricably connected to the growth of western capitalism. This had a lasting impact on the way capitalism developed in a colonised country like India. In the next section on industrialisation and urbanisation we see how colonialism led to very distinct patterns.

If capitalism became the dominant economic system, nation states became the dominant political form. That we all live in nation states and that we all have a nationality or a national citizenship may appear natural to us today. Before the First World War passports were not widely used for international travel, and in most areas few people had one. Societies were, however, not always organised on these lines. Nation state pertains to a particular type of state, characteristic of the modern world. A government has sovereign power within a defined territorial area, and the people are citizens of a single nation. Nation states are closely associated with the rise of nationalism. The principle of nationalism assumes that any set of people have a right to be free and exercise sovereign power. It is an important part of the rise of democratic ideas. You will be reading more about this in chapter 3. It must have struck you that the practice of colonialism and the principle of nationalism and democratic rights are contradictory. For colonial rule implied foreign rule such as British rule over India. Nationalism implied that the people of India or of any colonised society have an equal right to be sovereign. Indian nationalist leaders were quick to grasp this irony. They declared that freedom or *swaraj* was their birth-right and fought for both political and economic freedom.

### 1.2 Urbanisation and Industrialisation

**The Colonial Experience**

*Industrialisation* refers to the emergence of machine production, based on the use of inanimate power resources like steam or electricity. In most standard western textbook of sociology we learn that in even the most advanced of traditional civilizations, most people were engaged in working on the land. The relatively low level of technological development did not permit more than a small minority to be freed from the chores of agricultural production. By contrast, a prime feature of industrial societies today is that a large majority of the employed
population work in factories, offices or shops rather than agriculture. Over 90 per cent of people in the west live in towns and cities, where most jobs are to be found and new job opportunities are created. Not surprisingly, therefore, we usually associate urbanisation with industrialisation. They often do occur together but not always so.

For instance in Britain, the first society to undergo industrialisation, was also the earliest to move from being rural to a predominantly urban country.

In 1800, well under 20 per cent of the population lived in towns or cities of more than 10,000 inhabitants. By 1900 this proportion had become 74 per cent. The capital city, London, was home to about 1.1 million people in 1800; it increased in size to a population of over 7 million by the start of the twentieth century. London was then by far the largest city ever seen in the world, a vast manufacturing, commercial and financial centre at the heart of a still-expanding British empire. (Giddens 2001: 572)

In India the impact of the very same British industrialisation led to deindustrialisation in some sectors, and decline of old urban centres. Just as manufacturing boomed in Britain, traditional exports of cotton and silk manufactures from India declined in the face of Manchester competition. This period also saw the further decline of cities such as Surat and Masulipatnam while Bombay and Madras grew. When the British took over Indian states, towns like Thanjavur, Dhaka, and Murshidabad lost their courts and, therefore, some of their artisans and court gentry. From the end of the 19th century, with the installation of mechanised factory industries, some towns became much more heavily populated.

Urban luxury manufactures like the high quality silks and cottons of Dacca or Murshidabad must have been hit first by the almost simultaneous collapse of indigenous court demand and the external market on which these had largely depended. Village crafts in the interior, and particularly, in regions other than eastern India where British penetration was earliest and deepest, probably survived much longer, coming to be seriously affected only with the spread of railways. (Sarkar 1983: 29)
Unlike Britain where the impact of industrialisation led to more people moving into urban areas, in India the initial impact of the same British industrialisation led to more people moving into agriculture. The Census of India Report shows this clearly.

Sociological writings in India have often discussed both the contradictory and unintended consequences of colonialism. Comparisons have been made between the industrialisation in the west and the growth of a western middle class with that of the Indian experience. The box below carries one such observation. It also shows how industrialisation is not just about new machine based production but also a story of the growth of new social groups in society and new social relationships. In other words it is about changes in the Indian social structure.

Cities had a key role in the economic system of empires. Coastal cities such as Mumbai, Kolkata and Chennai were favoured. From here primary commodities could be easily exported and manufactured goods could be cheaply imported. Colonial cities were the prime link between the economic centre or core in Britain and periphery or margins in colonised India. Cities in this sense were the concrete expression of global capitalism. In British India for example Bombay was planned and

The extensive importation of cheap European piecegoods and utensils, and the establishment in India itself of numerous factories of the Western type, have more or less destroyed many village industries. The high prices of agricultural produce have also led many village artisans to abandon their hereditary craft in favour of agriculture...The extent to which this disintegration of the old village organisation is proceeding varies considerably in different parts. The change is most noticeable in the more advanced provinces.

The substitutes offered by the East India Company and subsequently by the British government were land ownership and facilities for education in English. The facts that the first remained unconnected with agricultural productivity and the second with the mainstream of Indian cultural traditions amply show that the alternatives were not sufficient in the sense that they could not create any genuine middle class. We know only too well that the zamindars become parasites in land and the graduates job hunters. (Mukherjee 1979: 114)

Find out more about the beginnings of the three cities.

Find out also more about the story of the names they were called by leading to the very recent changes from Bombay to Mumbai, Madras to Chennai, Calcutta to Kolkata, Bangalore to Bengaluru.

Find out about the growth of other colonial urban centres.
re-developed so that by 1900 over three-quarters of India’s raw cotton were shipped through the city. Calcutta exported jute to Dundee while Madras sent coffee, sugar, indigo dyes and cotton to Britain.

Urbanisation in the colonial period saw the decline of some earlier urban centres and the emergence of new colonial cities. Kolkata was one of the first of such cities. In 1690, an English merchant named Job Charnock arranged to lease three villages (named Kolikata, Gobindapur, and Sutanuti) by the river Hugli in order to set up a trading post. In 1698, Fort William was established by the river for defensive purposes, and a large open area was cleared around the fort for military engagements. The fort and the open area (called Maidan) formed the core of the city that emerged rather rapidly.

**The Tea Plantations**

We have already seen how industrialisation and urbanisation did not happen in India quite the way it did in Britain. More importantly, this is not because we began industrialisation late, but because our early industrialisation and urbanisation in the modern period were governed by colonial interests.

We cannot go into details about different industries here. We simply take the case of the tea industry in India as an example. Official reports show how the colonial government often used unfair means to hire and forcibly keep labourers. And clearly acted on behalf of the British planters. From fictional and other accounts we get a glimpse of what life was for planters in this industry.

Significantly the colonial administrators were clear that harsh measures were taken against the labourers to make sure they benefited the planters. They were also fully aware that the laws of a colonised country did not have to stick to the democratic norms that the British back home had to follow in Britain.
How were labourers recruited?

Tea industry began in India in 1851. Most of the tea gardens were situated in Assam. In 1903, the industry employed 4,79,000 permanent and 93,000 temporary employees. Since Assam was sparsely populated and the tea plantations were often located on uninhabited hillsides, bulk of the sorely needed labour had to be imported from other provinces. But to bring thousands of people every year from their far-off homes into strange lands, possessing an unhealthy climate and infected with strange fevers, required the provision of financial and other incentives, which the tea-planters of Assam were unwilling to offer. Instead, they had recourse to fraud and coercion; and they persuaded the government to aid and abet them in this unholy task by passing penal laws. …The recruitment of labourers for tea gardens of Assam was carried on for years mostly by contractors under the provisions of the Transport of Native Labourers Act (No. III) of 1863 of Bengal as amended in 1865, 1870 and 1873.

From Curzon’s Speeches II, pp. 238-9

The labour system in Assam was essentially that of indenture by which the labourers went to Assam under contract for a number of years. The government helped the planters by providing for penal sanction in case of non-fulfilment of the contract by the labourers.

This view is explicitly made by T. Raleigh, Law Member, when speaking on the Assam Labour and Emigration Bill of 1901: “The labour-contract authorised by this Bill is a transaction by which, to put it rather bluntly, a man is often committed to Assam before he knows what he is doing, and is thereupon held to his promise for four years, with a threat of arrest and imprisonment if he fails to perform it. Conditions like these have no place in the ordinary law of master and servant. We made them part of the law of British India at the instance and for the benefit of the planters of Assam… The fact remains that the motive power in this legislation is the interest of the planter, not the interest of the coolie”.

Exercise for Box 1.6 and 1.7

Read the two boxes below and discuss:

- The role of the colonial government and its legislations to regulate work.
- The role of the colonial state to help British tea planters.
- Find out where the descendents of the workers work and live today.

You have a sense of the lives of the labourers. Let us see how the planters’ lived.
We saw in the earlier section how the colonial state had an important role in the way industrialisation and urbanisation took place in India. Here we very briefly touch upon how the independent Indian state played an active role in promoting industrialisation. And in some sense was responding to the impact that colonialism had on the growth of industry in India. Chapter 5 will deal with Indian industrialisation and its shift from the early years of independence to developments after 1990 with liberalisation.

For Indian nationalists the issue of economic exploitation under colonial rule was a central issue. Images of pre-colonial fabled riches of India contrasted with the poverty of British India. The Swadeshi movement strengthened the loyalty to the national economy. Modern ideas made people realise that poverty was preventable. Indian nationalists saw rapid industrialisation of the economy as the path towards both growth and social equity. Development of heavy and machine-making industries, expansion of the public sector and holding of a large cooperative sector were considered very important.

A modern and prosperous India, as visualised by Jawaharlal Nehru, was to be built on an edifice of giant steel plants or gigantic dams and power stations. Read Nehru’s remarks on the Bhakra Nangal dam:

```
Our engineers tell us that probably nowhere else in the world is there a dam as high as this. The work bristles with difficulties and complications. As I walked around the site I thought that these days the biggest temple and mosques and gurdwara is the place where man works for the good of mankind. Which place can be greater than this, this Bhakra Nangal, where thousands and lakhs of men have worked, have shed their blood and sweat and laid down their lives as well? (Nehru 1980: 214)
```

**Box 1.8**

**How did the planter’s live?**

Parbatpuri had always been an important offloading and loading point. The doughty British managers and their *mems* always came down from the estates surrounding Parbatpuri when a steamer docked there. In spite of the inaccessibility of the gardens, they had lived lives of luxury. Huge, sprawling bungalows, set on sturdy wooden stilts to protect the inmates from wild animals, were surrounded by velvety lawns and jewel bright flower beds…They had trained a large number of *malis*, *bawarchis* and bearers to serve them to perfection. Their wide verandahed houses gleamed and glistened under the ministrations of this army of liveried servants.

Of course, everything from scouring powder to self-raising flour, from safety pins to silverware, from delicate Nottingham lace tablecloths to bath salts, had come up the river on the steamers. Indeed, even the large cast-iron bath tubs that were invitingly placed in huge bathrooms, tubs which were filled every morning by busy *bistiwallahs* carrying buckets up from the bungalow’s well, had been brought up via steamer.

*(Phukan 2005)*
Nearly a decade before the country’s Independence, in 1938 a National Planning Committee with Jawaharlal Nehru as the Chairman and K.T. Shah as the general editor was set up by the Indian National Congress. The Committee started functioning in 1939, but it could not make much headway as the chairman was arrested by the British and the war broke out. Notwithstanding these obstacles, 29 sub-committees divided into eight groups were set up to deal with all aspects of national life and to work in accordance with a predetermined plan. The major areas on which the Committee focussed its attention were:

(a) Agriculture and other sources of primary production
(b) Industries or other secondary sources of production
(c) Human factor: labour and population
(d) Exchange and finance
(e) Public utilities: transport and communication
(f) Social services: health and housing
(g) Education: general and technical
(h) Woman’s role in a planned economy

Among the sub-committees, some submitted their final reports and several others interim reports before India became independent. Several reports were published by 1948–49. The Planning Commission was set up in March 1950 by a resolution of the Government of India, which is defining the scope of the Commission’s work.

Many new industrial towns emerged in India in the years after Independence. May be some of you live in such towns.

➢ Find out more about towns, like Bokaro, Bilai, Rourkela, Durgapur. Find out whether such industrial towns exist in your region.
➢ Do you know of townships built around fertiliser plants and oil wells.
➢ If no such town exists in your region, find out the reasons for their absence.

**Urbanisation in Independent India**

You would be more than aware of increasing urbanisation in India. Recent years of globalisation have led to enormous expansion and change of cities. In the 21st century, India will be witnessing fast pace of urbanisation with the ambitious scheme of ‘Smart City’ initiated by the Government of India. We shall be dealing with that later in Chapter 6. Here, we draw from a sociological account of the different kinds of urbanisation in India.
Writing on the different kinds of urbanisation witnesses in the first two decades after independence sociologist M.S.A. Rao argued that in India many villages all over India are becoming increasingly subject to the impact of urban influences. But the nature of urban impact varies according to the kind of relations a village has with a city or town. He describes three different situations of urban impact as mentioned in the box.

Firstly, there are villages in which a sizeable number of people have sought employment in far-off cities. They live there leaving behind the members of their families in their natal villages. In Madhopur, a village in north central India, 77 out of 298 households have migrants, and a little less than half of all the migrants work in two cities of Bombay and Calcutta. About 75 percent of the total migrants send money regularly, and 83 per cent visit the village from four to five times a year to once in two years... A considerable number of emigrants reside not only in Indian cities but also in overseas towns. For instance, there are many overseas migrants from Gujarat villages living in African and British towns. They have built fashionable houses in their natal villages, invested money on land and industry, and have donated literally to the establishment of educational institutions and trusts...

The second kind of urban impact is to be seen in villages which are situated near an industrial town...When an industrial town like Bhilai comes up in the midst of villages, some villages are totally uprooted while the lands of others are partially acquired. The latter are found to receive an influx of immigrant workers, which not only stimulates a demand for houses and a market inside the village but creates problems of ordering relationships between the native residents and the immigrants...

...The growth of metropolitan cities accounts for the third type of urban impact on the surrounding villages...While a few villages are totally absorbed in the process of expansion, only the land of many others, excluding the inhabited area, is used for urban development...

(Rao 1974: 486-490)

**Exercise for Box 1.10**

Read the above account carefully. May be you have seen other ways or similar ways that urbanisation takes place. Write a brief account of this. Discuss each other’s accounts in class.
The above chart indicates that the urban population and the number of UA/Towns in India are increasing. The chart below indicates that the per cent share of the urban population is increasing but decennial growth rate of the urban population shows a decreasing trend.
Structural Change

In 1951, 17.29% of India’s population i.e., 62.44 million people, were living in 2,843 towns. In 2011, 31.16% of India’s population i.e., 377.10 million people, were living in 7,935 towns. This shows a steady increase in terms of absolute numbers, number of UA/towns and the per cent share of the urban population. However, the decennial growth rate of the urban population showed a declining trend during 1981–2001, reversed the trend and showed marginal increase in 2011. The decennial growth rate of the urban population in 1951 was 41.42% and in 2011, it was 31.80%.

For the first time since Independence, the absolute increase in population is more in urban areas than in rural areas. This is due to a sharp decline in the growth rate in rural areas, while the growth rate in urban areas remains almost the same.

**CONCLUSION**

It will be obvious to you that colonialism is not just a topic in history but something which lives on in complex ways in our lives even today. It is also evident from the above account that industrialisation and urbanisation imply changes not just in production systems, technological innovations, density of settlements but also ‘a way of life’. (Wirth, 1938). You shall be reading more about industrialisation and urbanisation in independent India in Chapter 5 and 6.

1. How has colonialism impacted our lives? You can either focus on one aspect, like culture or politics, or treat them together.
2. Industrialisation and urbanisation are linked processes. Discuss.
3. Identify any town or city with which you are familiar. Find out both the history of its growth and its contemporary status.
4. You may be living in a very small town, may be in a very big city, a semi-urban settlement or a village.
   - Describe the place where you live.
   - What are the features, which make you think it is a town and not a city, a village and not a town, or a city and not a village?
   - Is there any factory where you live?
   - Is agriculture the main job that people do?
   - Is it the occupational nature that has a determining influence?
     - Is it the buildings?
     - Is it the availability of educational opportunities?
     - Is it the way people live and behave?
     - Is it the way people talk and dress?

Wirth, Louis. 1938. ‘Urbanism as a way of life’. American Journal of Sociology. 44.
2 Cultural Change
We saw in the last chapter how colonialism brought in changes that altered the structure of Indian society. Industrialisation and urbanisation transformed the lives of people. Factories replaced fields as places of work for some. Cities replaced villages as places to live for many. Living and working arrangements or structures changed. Changes also took place in culture, ways of life, norms, values, fashions and even body language. Sociologists understand, social structure, as a ‘continuing arrangement of persons in relationships defined or controlled by institutions’ and ‘culture’ as ‘socially established norms or patterns of behaviour’. You have already studied about the structural changes that colonialism brought about in chapter 1. You will observe how important those structural changes are for understanding the cultural changes that this chapter seeks to understand.

This chapter looks at two related developments, both a complex product of the impact of colonial rule. The first deals with the deliberate and conscious efforts made by the 19th century social reformers and early 20th century nationalists to bring in changes in social practices that discriminated against women and ‘lower’ castes. The second with the less deliberate yet decisive changes in cultural practices that can broadly be understood as the four processes of sanskritisation, modernisation, secularisation and westernisation. Sanskritisation pre-dates the coming of colonial rule. The other three processes can be understood better as complex responses of the people of India to the changes that colonialism brought about.

2.1 Social Reform Movements in the 19th and Early 20th Century

You have already seen the far-reaching impact of colonialism on our lives. The social reform movements which emerged in India in the 19th century arose to the challenges that colonial Indian society faced. You probably are familiar with what were termed social evils that plagued Indian society. The well-known issues are that of sati, child marriage, widow remarriage and caste discrimination. It is not that attempts were not made to fight social discrimination in pre-colonial India. They were central to Buddhism, to Bhakti and Sufi movements. What marked these 19th century social reform attempts was the modern context and mix of ideas. It was a creative combination of modern ideas of western liberalism and a new look on traditional literature.
Sociologist Satish Saberwal elaborates upon the modern context by sketching three aspects to the modern framework of change in colonial India:

- modes of communication
- forms of organisation, and
- the nature of ideas

New technologies speeded up various forms of communication. The printing press, telegraph, and later the microphone, movement of people and goods through steamship and railways helped quick movement of new ideas. Within India, social reformers from Punjab and Bengal exchanged ideas with reformers from Madras and Maharashtra. Keshav Chandra Sen of Bengal visited Madras in 1864. Pandita Ramabai travelled to different corners of the country. Some of them went to other countries. Christian missionaries reached remote corners of present day Nagaland, Mizoram and Meghalaya.

New technologies and organisations that speeded up various forms of communication
Modern social organisations like the Brahmo Samaj in Bengal and Arya Samaj in Punjab were set up. The All-India Muslim Ladies Conference (Anjuman-E-Khawatn-E-Islam) was founded in 1914. Indian reformers debated not just in public meetings but through public media like newspapers and journals. Translations of writings of social reformers from one Indian language to another took place. For instance, Vishnu Shastri published a Marathi translation of Vidyasagar’s book in Indu Prakash in 1868.

New ideas of liberalism and freedom, new ideas of homemaking and marriage, new roles for mothers and daughters, new ideas of self-conscious pride in culture and tradition emerged. The value of education became very important. It was seen as very crucial for a nation to become modern but also retain its ancient heritage. The idea of female education was debated intensely. Significantly, it was the social reformer Jotiba Phule who opened the first school for women in Pune. Reformers argued that for a society to progress women have to be educated. Some of them believed that in pre-modern India, women were educated. Others contested this on the grounds that this was so only of a privileged few. Thus attempts to justify female education were made by recourse to both modern and traditional ideas. They actively debated the meanings of tradition and modernity. Jotiba Phule thus recalled the glory of pre-Aryan age while others like Bal Gangadhar Tilak emphasised the glory of the Aryan period. In other words 19th century reform initiated a period of questioning, reinterpretations and both intellectual and social growth.

The varied social reform movements did have common themes. Yet there were also significant differences. For some the concerns were confined to the problems that the upper caste, middle class women and men faced. For others the injustices suffered by the discriminated castes were central questions. For some social evils had emerged because of a decline of the
true spirit of Hinduism. For others caste and gender oppression was intrinsic to the religion. Likewise Muslim social reformers actively debated the meaning of polygamy and purdah. For example, a resolution against the evils of polygamy was proposed by Jahanara Shah Nawas at the All India Muslim Ladies Conference. She argued:

…the kind of polygamy which is practiced by certain sections of the Muslims is against the true spirit of the Quran… and it is the duty of the educated women to exercise their influence among the relations to put an end to this practice.

The resolution condemning polygamy caused considerable debate in the Muslim press. Tahsib-e-Niswan, the leading journal for women in the Punjab, came out in favour of the resolve, but others disapproved. (Chaudhuri 1993: 111). Debates within communities were common during this period. For instance, sati was opposed by the Brahma Samaj. Orthodox members of the Hindu community in Bengal formed an organisation called Dharma Sabha and petitioned the British arguing that reformers had no right to interpret sacred texts. Yet another view increasingly voiced by Dalits was a complete rejection of the Hindu fold. For instance, using the tools of modern education, Muktabai, a 13 year old student in Phule’s school writes in 1852:

Let that religion
Where only one person is privileged
And the rest are deprived
Perish from this earth
And let it never enter our minds
To be proud of such a religion…

2.2 How do we approach the study of Sanskritisation, Modernisation, Secularisation and Westernisation

In this chapter each of the four concepts, namely sanskritisation, modernisation, secularisation and westernisation, are dealt with in different sections. But as the discussion unfolds, it will become obvious to you that in many ways they overlap and in many situations they co-exist. In many situations they operate very differently. It is not surprising to find the same person being modern in some ways and traditional in another. This co-existence is often seen as natural to India and many other non-western countries.
But you know that sociology does not rest content with naturalist explanation. (Recall the discussion in chapter 1, Book 1 NCERT 2006) As the last chapter has shown colonial modernity had its own paradoxes. Take the example of western education. Colonialism led to the growth of an English educated Indian middle class. They read the thinkers of western enlightenment, philosophers of liberal democracy and dreamt of ushering in a liberal and progressive India. And yet, humiliated by colonial rule they asserted their pride in traditional learning and scholarship. You have already seen this trend in the 19th century reform movements.

As this chapter will show, modernity spelled not merely new ideas but also rethinking and reinterpretation of tradition. Both culture and tradition are living entities. People learn them and in turn modify them. Take the everyday example of how the sari or jain sem or sarong is worn in India today. Traditionally the sari, a loose unstitched piece of cloth was differently worn in different regions. The standard way that the modern middle class woman wears it was a novel combination of the traditional sari with the western ‘petticoat’ and ‘blouse’.

**Activity 2.2**

While you read the way the four processes are used in sociology, it may be interesting to discuss in class what you think the terms mean.

- What kind of behaviour would you define as:
  - Western
  - Modern
  - Secular
  - Sanskritisied
- Why?
- Return to Activity 2.2 after you finish the chapter.
- Did you find any difference between common sense usage of the terms and their sociological meaning?

**Activity 2.3**

Think of other instances of the mix and match both from everyday life and from the wider level.

My father’s clothes represented his inner life very well. He was a south Indian Brahmin gentleman. He wore neat white turbans, a Sri Vaisnava caste mark..yet wore Tootal ties, Kromentz buttons and collar studs, and donned English serge jackets over his muslin dhotis which he wore draped in traditional Brahmin style.

*Source: A.K. Ramanujan in Marriot ed. 1990: 42*
India’s structural and cultural diversity is self-evident. This diversity shapes the different ways that modernisation or westernisation, sanskritisation or secularisation effects or does not effect different groups of people. The following pages seek to capture these differences. The constraint of space prevents a further detailing out. It is up to you to explore and identify the complex ways modernisation impacts people in different parts of the country or impacts different classes and castes in the same region. And even women and men from the same class or community.

We begin with the concept sanskritisation. The reason for doing so is because it refers to a process that pertains to social mobility that existed before the onset of colonialism. And persisted in diverse ways subsequently. The other three changes as we shall shortly see, arose in a context marked by changes that colonialism brought about. This included direct exposure to modern western ideas of freedom and rights. As mentioned earlier this exposure heightened the sense of injustice on the one hand and humiliation on the other. Often this led to a desire to go back to one’s traditional past and heritage. It is within this mix that we can understand India’s tryst with modernisation, westernisation and secularisation.

2.3 Different Kinds of Social Change

Sanskritisation

The term sanskritisation was coined by M.N. Srinivas. It may be briefly defined as the process by which a ‘low’ caste or tribe or other group takes over the customs, ritual, beliefs, ideology and style of life of a high and, in particular, a ‘twice-born (dwijā) caste’.

The impact of Sanskritisation is many-sided. Its influence can be seen in language, literature, ideology, music, dance, drama, style of life and ritual.

It is primarily a process that takes place within the Hindu space though Srinivas argued that it was visible even in sects and religious groups outside Hinduism. Studies of different areas, however, show that it operated differently in different parts of the country. In those areas where a highly Sanskritised caste was dominant, the culture of the entire region underwent a certain amount of Sanskritisation. In regions where the non-Sanskritic castes were dominant, it was their influence that was stronger. This can be termed the process of ‘de-Sanskritisation’. There were other regional variations too. In Punjab culturally Sanskrit influence was never very strong. For many centuries until the third quarter of the 19th century the Persian influence was the dominant one.

Srinivas argued that, “the Sanskritisation of a group has usually the effect of improving its position in the local caste hierarchy. It normally presupposes
either an improvement in the economic or political position of the group concerned or a higher group self-consciousness resulting from its contact with a source of the ‘Great Tradition’ of Hinduism such as a pilgrim centre or a monastery or a proselytising sect.” But in a highly unequal society such as India there were and still are obstacles to any easy taking over of the customs of the higher castes by the lower. Indeed, traditionally, the dominant caste punished those low castes, which were audacious enough to attempt it. The story below captures the problem.

Kumud Pawade in her autobiography recounts how a Dalit woman became a Sanskrit teacher. As a student she is drawn towards the study of Sanskrit, perhaps because it is the means through which she can break into a field that was not possible for her to enter on grounds of gender and caste. Perhaps she was drawn towards it because it would enable her to read in the original what the texts have to say about women and the Dalits. As she proceeds with her studies, she meets with varied reactions ranging from surprise to hostility, from guarded acceptance to brutal rejection. As she says:

The result is that although I try to forget my caste, it is impossible to forget. And then I remember an expression I heard somewhere: “What comes by birth, but can’t be cast off by dying - that is caste?”

Sanskritisation suggests a process whereby people want to improve their status through adoption of names and customs of culturally high-placed groups. The ‘reference model’ is usually financially better of. In both, the aspiration or desire to be like the higher placed group occurs only when people become wealthier.

Sanskritisation as a concept has been criticised at different levels. One, it has been criticised for exaggerating social mobility or the scope of ‘lower castes’ to move up the social ladder. For it leads to no structural change but only positional change of some individuals. In other words inequality continues to persist though some individuals may be able to improve their positions within the unequal structure. Two, it has been pointed out that the ideology of sanskritisation accepts the ways of the ‘upper caste’ as superior and that of the ‘lower caste’ as inferior. Therefore, the desire to imitate the ‘upper caste’ is seen as natural and desirable.

Third, ‘sanskritisation’ seems to justify a model that rests on inequality and exclusion. It appears to suggest that to believe in pollution and purity of groups of people is justifiable or all right. Therefore, to be able to look down on some groups just as the ‘upper castes’ looked down on the ‘lower castes’, is a mark of privilege. In society where such a world-view exists, imagining an equal society becomes difficult. The study on the next page shows how the very idea of purity and pollution are valued or seen as worthwhile ideas to have.
Although Goldsmith-castes are people higher than me, our caste rules prohibit our taking food or water from them. We have a belief that Goldsmiths are so greedy that they wash excrement to dig out gold. Although higher in caste, they are therefore, more polluting than we are. We also don’t take food from other higher castes who do polluting things: Washermen, who work with dirty clothes, and Oilpressers, who crush and kill seeds to make oil.

It shows how such discriminatory ideas become a way of life. Instead of aspiring for an equal society, the exclusion and discrimination seek to give their own meaning to their excluded status. In other words they aspire to be in a position from where they can in turn look down on other people. This reflects an essentially undemocratic vision.

Fourth, since sanskritisation results in the adoption of upper caste rites and rituals it leads to practices of secluding girls and women, adopting dowry practices instead of bride-price and practising caste discrimination against other groups, etc.

Fifth, the effect of such a trend is that the key characteristics of dalit culture and society are eroded. For example the very worth of labour which ‘lower castes’ do is degraded and rendered ‘shameful’. Identities based on the basis of work, crafts and artisanal abilities, knowledge forms of medicine, ecology, agriculture, animal husbandry, etc., are regarded useless in the industrial era.

With the growth of the anti-Brahminical movement and the development of regional self-consciousness in the twentieth century there was an attempt in several Indian languages to drop Sanskrit words and phrases. A crucial result of the Backward Classes Movement was to emphasise the role of secular factors in the upward mobility of caste groups and individuals. In the case of the dominant castes, there was no longer any desire to pass for the Vaisyas, Kshatriyas and Brahmins. On the other hand, it was prestigious to be a member of the dominant caste. Recent years have seen likewise assertions of Dalits who now pride their identity as Dalits. However, sometimes as among the poorest and the most marginalised of the dalit caste groups, caste identity seems to compensate their marginality in other domains. In other words they have gained some pride and self-confidence but otherwise remain excluded and discriminated.

**Westernisation**

You have already read about our western colonial past. You have seen how it often brought about changes that were paradoxical and strange. M.N. Srinivas defines westernisation as “the changes brought about in Indian society and culture as a result of over 150 years of British rule, the term subsuming changes occurring at different levels...technology, institutions, ideology and values”.
There were different kinds of westernisation. One kind refers to the emergence of a westernised sub-cultural pattern through a minority section of Indians who first came in contact with Western culture. This included the sub culture of Indian intellectuals who not only adopted many cognitive patterns, or ways of thinking, and styles of life, but supported its expansion. Many of the early 19th century reformers were of this kind. The boxes show the different kinds of westernisation.

There were, therefore, small sections of people who adopted Western life styles or were affected by Western ways of thinking. Apart from this there has been also the general spread of Western cultural traits, such as the use of new technology, dress, food, and changes in the habits and styles of people in general. Across the country a very wide section of middle class homes have a television set, a fridge, some kind of sofa set, a dining table and chair in the living room.

Westernisation does involve the imitation of external forms of culture. It does not necessarily mean that people adopt modern values of democracy and equality.

Ways of thinking

...John Stuart Mill’s essay ‘On Liberty’ soon after its publication became a text in Indian colleges. Indians came to know about Magna Carta, and the struggle for liberty and equality in Europe and America.

Ways of living

Devaki recalls that when she was small, in her house boiled eggs were eaten in eggcups and her mother would make the porridge and serve it separately on the table with the hot milk and sugar, to be mixed in each person’s bowl. This was distinctly different from other households. Devaki says, where boiled eggs were not eaten in egg cups and where the porridge, milk and sugar were all mixed together, cooked in a pan, and then served. She remembers asking her mother why they ate porridge like that and her mother saying that this was the way they used to eat porridge in the estate. (Abraham 2006: 146)

(This is drawn from an ethnographic study of the Thiyya community in Kerala)

Activity 2.5

- Can you think of Indians who are very western in their clothes and appearances but who do not have democratic and egalitarian values that are part of modern attitudes. We are giving two examples below. Can you think of other instances from both real and reel life?

We may find people who are western educated but holding very prejudiced views about particular ethnic or religious communities. A family can adopt external forms of western culture like the way the interiors of houses are done up but may have very conservative ideas about women’s role in society. The practice of female foeticide combines discriminatory attitude towards women and the use of very modern technology.

- You should also discuss that whether this contradiction is only true for the Indians or non-western societies. Or is it not equally true that racist and discriminatory attitudes exist in western societies.
Apart from ways of life and thinking the west influenced Indian art and literature. Artists like Ravi Varma, Abanindranath Tagore, Chandu Menon and Bankimchandra Chattopadhya were all grappling with the colonial encounter. The box below captures the many ways that style, technique and the very theme of an artist like Ravi Varma were shaped by western and indigenous traditions. It discusses the portrait of a family in a matrilineal community of Kerala but one that significantly resembles the very typical patrilineal nuclear family of the modern west consisting of the father, mother and children.

In 1870 Ravi Varma received his first paid commission to paint the portrait of Kizhakke Palat Krishna Menon’s family. ...This is a transitional work which blends elements of a flatter, two-dimensional style popular within earlier water-colours with the newer techniques of perspective and illusionism, made possible by the use of a medium like oil.

Another feature is the technique of spatial organisations of the seated and figures in deference to age and hierarchy, which is once again reminiscent of nineteenth century European portraits of the bourgeois family. ...How strange then this portrait was painted in matrilineal Kerala at a time when most of the Nayars, Krishna Menon’s caste, would have been unused to living in patrilocal nuclear families...

Source: G . Arunima “Face value: Ravi Varma’s portraiture and the project of colonial modernity”. The Indian Economic and Social History Review 40, 1 (2003) pp. 57 - 80)
Often westernisation among the middle class makes generational difference more complex

...And though they are of my own flesh and blood, they sometimes seem like total strangers to me. I no longer have anything in common with them...neither with their ways of thinking, nor with the way they dress up, talk or behave. They are the new generation. And my mental makeup is such that any sort of mutuality between them and me becomes impossible. Yet I love them with all my heart. I give them whatever they desire, for their happiness is all I want. Rabindranth’s words set my heart in a tremulous feeling: “This is your time; for now is the beginning of my end.” I have nothing in common with my children Pallav, Kallol and Kingkini. Pallav lives in a different country, in a different culture altogether. We, for instance, had worn the mekela-chadar from the age of twelve. But now my daughter Kingkini, a student of Business Management at Gauhati University wears pant and buggy shirts. And Kallol likes to sport a mass of unruly hair on his head. When I feel listening to a Meera-Bhajan, Kallol and Kingkini choose to play their favourite pop numbers by Whitney Houston. At times, when I feel like singing a few lines of Bargeet, Kinkin likes to play western tunes on her guitar.

Srinivas suggested that while ‘lower castes’ sought to be Sanskritised, ‘upper castes’ sought to be Westernised. In a diverse country such as India this generalisation is difficult to maintain. For instance, studies of Thiyyas (by no means considered ‘upper caste’) in Kerala show conscious efforts to westernise. Elite Thiyyas appropriated British culture as a move towards a more cosmopolitan life that critiqued caste. Likewise, Western education often implied opening up to new opportunities for different groups of people in the North-East. Read the following account.
My grandfather, like most Nagas who had come into close contact with Europeans, was convinced that education was the only way to get ahead in life. He aspired for his children the kind of life he had seen being lived by the British administration and missionaries. He sent my mother away to school first in neighbouring Assam, then as far away as Shimla. My mother was encouraged by one of the more educated men in her village who told her that with an education in these new times, she could even become like the Indian lady who spoke before the world- Vijayalakshmi Pandit, sister of Nehru, who represented India at the UN. My father by dint of his own intelligence and hard work put himself through the local mission school and college in Shillong. All Nagas of my parents’ generation who were able to, chose to get educated in English. For them it was more than a gateway to upward mobility. In a region where tribes that live no more than 20 kms apart speak completely different languages, it was a medium through which they could communicate amongst themselves and with the world. They became the voice of their people and made English the official state language. (Ao 2005: 111)

We usually refer to the colonial impact to discuss westernisation. However often we find new forms of westernisation in the contemporary period. Activity 2.6 draws attention to this.

Activity 2.6

- Observe the many small and big ways that westernisation affects our lives.
- You have already seen how British colonialism affected our lives. How westernisation meant emulating or wanting to be like the British. Increasingly we find westernisation being more Americanisation. Read a recent letter to the editor of a newspaper given below and discuss.

The new Raj

Presumably to set itself apart from the Continent, Britain and Ireland, from where its founders had come, the US chose to partly reverse the date-month-year format and create its own month-date-year one. ...The 11th of September, the day of the attack on the World Trade Centre in New York, automatically became “9/11”. As this was the shorthand which the US used, the rest of the world used it too, never mind that in most countries the number of a month in a year follows that of a day in a month. How do we explain the fact that the shorthand used in the Mumbai train blasts is “7/11”? We were a British colony, so we mostly use the DD-MM-YY format...

The Hindu August 21, 2006.

At one time many Indians sought to speak English the British way. Has there been a change in this? Is American accent more influential now?
MODERNISATION AND SECULARISATION

The term modernisation has a long history. From the 19th and more so the 20th century the term began to be associated with positive and desirable values. People and societies wanted to be modern. In the early years, modernisation referred to improvement in technology and production processes. Increasingly, however, the term had a wider usage. It referred to the path of development that much of west Europe or North America has taken. And suggested that other societies both have to and ought to follow the same path of development.

In India the beginnings of capitalism, as we saw in chapter 1, took place within the colonial context. The story of our modernisation and secularisation is, therefore, quite distinct from their growth in the west. This is evident when we discussed westerisation and the efforts of the 19th century social movements earlier in this chapter. Here we look into the two processes of modernisation and secularisation together for they are linked. They are both part of a set of modern ideas. Sociologists have tried to define what exactly constitutes the modernisation process.

‘[M]odernity’ assumes that local ties and parochial perspectives give way to universal commitments and cosmopolitan attitudes; that the truths of utility, calculation, and science take precedence over those of the emotions, the sacred, and the non-rational; that the individual rather than the group be the primary unit of society and politics; that the associations in which men live and work be based on choice not birth; that mastery rather than fatalism orient their attitude toward the material and human environment; that identity be chosen and achieved, not ascribed and affirmed; that work be separated from family, residence, and community in bureaucratic organisation….(Rudolph and Rudolph, 1967)

In other words it means that people are influenced not just by local but universal contexts. How you behave, what you think is no longer decided by your family or tribe or caste or community. What job you wish to do is decided not by the job your parent does, but by what you wish to do. Work gets based on choice, not birth. On whom you are depend on what you achieve, not by who you are. A scientific attitude gains ground. A rational approach matters. Is this entirely true?

In India often the job we do is not by choice. A scavenger does not choose his/her job. (chapter 5 book 1, NCERT 2007) We often marry within a caste or community. Religious beliefs continue to dominate our

ACTIVITY 2.7

Take any matrimonial column from any newspaper or websites like shaadi.com and try and see the pattern. How often is caste or community mentioned? If it is mentioned many times does it mean that caste continues to play the same kind of role as it did traditionally? Or has the role of caste changed? Discuss.
lives. At the same time we do have a scientific tradition. We also have a vibrant secular and democratic political system. At the same time we have caste and community based mobilisation. How do we understand these processes? This chapter has been trying to understand this mix.

It would be simplistic, however, to term the complex combinations just as a mix of tradition and modernity as though tradition and modernity themselves are fixed entities. Or as though India has or had just one set of traditions. We have already seen that both plurality and a tradition of argumentation have been defining features of 'traditions' in India. They are in fact constantly being redefined. We have already observed this with 19th century social reformers. This process, however, persists today. The box below describe such a process in contemporary Arunachal Pradesh.

With the advent of progress and the influences of modernisation, attitudes have changed to religion and to the celebration of the many festivals. Rituals, procedures of ceremonies, taboos associated with these ceremonies, the value and amount of sacrifices to be made, are now all subjects of constant change, especially in the mushrooming urban areas.

These new pressures on the concept of tribal identity have meant that traditional practices and their preservation have become almost a necessary expression of being tribal. Festivals have emerged as an emphatic projection of that sense of a unified tribe identity. It is as if the collective celebration of the festival has become a fitting response to the clarion call of 'Loss of Culture, Loss of Identity' that is doing the rounds in today's tribal society.

It is currently a common practice for Festival Celebration Committees to be formed in place of the Traditionally loose-knit work gang for the celebration of the festival. Traditionally, seasonal cycles determined the days of the celebration; now dates for the celebration have been formalised with each marked on the official government calendar.

At these festival celebrations, flags of no definite design, chief guests and speeches, and Miss Festival contests have become the new necessities. With rational concepts and worldviews infiltrating the minds of the tribal people, the practice and performance of the old faith is under due and undue scrutiny.

In the modern west, secularisation has usually meant a process of decline in the influence of religion. It has been an assumption of all theorists of modernisation that modern societies become increasingly secular. Indicators of secularisation have referred to levels of involvement with religious organisations (such as rates of church attendance), the social and material influence of religious organisations, and the degree to which people hold religious beliefs. Recent years have, however, seen an unprecedented growth of religious consciousness and conflict world over.

However even in the past, a view that assumed that modern ways would necessarily lead to decline in religious ways has not been entirely true. You will recall how western and modern forms of communication, organisation and ideas led to the emergence of new kinds of religious reform organisations. Furthermore, a considerable part of ritual in India has direct reference to the pursuit of secular ends.
Rituals have also secular dimensions as distinct from secular goals. They provide men and women with occasions for socialising with their peers and superiors, and for showing off the family’s wealth, clothing and jewellery. During the last few decades in particular, the economic, political and status dimensions of ritual have become increasingly conspicuous, and the number of cars lined up outside a wedding house and the VIPs who attended the wedding, provide the index to the household’s standing in the local community.

There has also been considerable debate about what is seen by some as secularisation of caste. What does this mean? In traditional India caste system operated within a religious framework. Belief systems of purity and pollution were central to its practice. Today it often functions as political pressure groups. Contemporary India has seen such formation of caste associations and caste based political parties. They seek to press upon the state their demands. Such a changed role of caste has been described as secularisation of caste. The box below illustrates this process.
Everyone recognises that the traditional social system in India was organised around caste structures and caste identities. In dealing with the relationship between caste and politics, however, the doctrinaire moderniser suffers from a serious xenophobia. He begins with the questions: is caste disappearing? Now, surely no social system disappears like that. A more useful point of departure would be: what form is caste taking under the impact of modern politics, and what form is politics taking in a caste-oriented society?

Those in India who complain of ‘casteism in politics’ are really looking for a sort of politics, which has no basis in society. …Politics is a competitive enterprise, its purpose is the acquisition of power for the realisation of certain goals, and its process is one of identifying and manipulating existing and emerging allegiances in order to mobilise and consolidate positions. The important thing is organisation and articulation of support, and where politics is mass-based the point is to articulate support through the organisations in which the masses are to be found. It follows that where the caste structure provides one of the principal organisational clusters along which the bulk of the population is found to live, politics must strive to organise through such a structure.

Politicians mobilise caste groupings and identities in order to organise their power. …Where there are other types of groups and other bases of association, politicians approach them as well. And as they everywhere change the form of such organisations, they change the form of caste as well.

(Kothari 1977: 57-70)

**Exercise for Box 2.8**

Read the text above carefully. Look at the italicised sentences. Summarise the central argument being made. Give examples of your own.

**Conclusion**

This chapter has sought to show the distinct ways that social change has taken place in India. The colonial experience had lasting consequences. Many of these were unintended and paradoxical. Western ideas of modernity shaped the imagination of Indian nationalists. It also prompted a fresh look at traditional texts by some. It also led to a rejection of these by others. Western cultural forms found their place in spheres ranging from how families lived to what codes of conduct should men, women and children have to artistic expressions. The ideas of equality and democracy made a huge impact as evident in both the reform movements and the nationalist movement. This led not just to adoption of western ideas, but also an active questioning and reinterpretation of tradition. The next chapter on the India’s experience with democracy will again show how a Constitution based on radical ideas of equality and social justice functioned in a society that is deeply unequal. It will further show the complex ways that both tradition and modernity constantly got and is getting redefined.
1. Write a critical essay on sanskritisation.

2. Westernisation is often just about adoption of western attire and lifestyle. Are there other aspects to being westernised? Or is that about modernisation? Discuss.

3. Write short notes on:
   - Rites and secularisation
   - Caste and secularisation
   - Gender and sanskritisation

3 The Story of Indian Democracy
We are all familiar with the idea that democracy is a government of the people, by the people, and for the people. Democracies fall into two basic categories, direct and representative. In a direct democracy, all citizens, without the intermediary of elected or appointed officials, can participate in making public decisions. Such a system is clearly only practical with relatively small numbers of people – in a community organisation or tribal council, for example, the local unit of a trade union, where members can meet in a single room to discuss issues and arrive at decisions by consensus or majority vote.

Modern society, with its size and complexity, offers few opportunities for direct democracy. Today, the most common form of democracy, whether for a town of 50,000 or nations of 1 billion, is representative democracy, in which citizens elect officials to make political decisions, formulate laws, and administer programmes for the public good. Ours is a representative democracy. Every citizen has the important right to vote her/his representative. People elect their representatives to all levels from Panchayats, Municipal Boards, State Assemblies and Parliament. There has increasingly been a feeling that democracy ought to involve people more regularly and should not just mean casting a vote every five years. Both the concepts of participatory democracy and decentralised governance have thus become popular. Participatory democracy is a system of democracy in which the members of a group or community participate collectively in the taking of major decisions. This chapter will discuss the panchayati raj system as an example of a major initiative towards decentralised and grassroot democracy.

Both the procedures as well as the values that form Indian democracy have developed over the long years of India’s anti-colonial struggle. In the last 70 years, since Independence, the success of Indian democracy has been seen as a remarkable feat for a country with such great diversity as well as inequality. This chapter cannot possibly provide a comprehensive account of its rich and complex past and present.

In this chapter we, therefore, try and provide only a synoptic view of democracy in India. We first look at the Indian Constitution, the bedrock of Indian democracy. We focus on its key values, briefly look at the making of the Constitution, drawing upon some snippets of the debates representing different views. Second, we look at the grassroot level of functioning democracy, namely the Panchayat Raj system. In both expositions you will notice that there are
different groups of people representing competing interest and often also different political parties. This is an essential part of any functioning democracy. The third part of this chapter seeks to discuss how competing interests function, what the terms interest groups and political parties mean and what their role is in a democratic system such as ours.

3.1 The Indian Constitution

The Core Values of Indian Democracy

Like so many other features of modern India we need to begin the story about modern Indian democracy from the colonial period. You have just read about the many structural and cultural changes that British colonialism brought about deliberately. Some of the changes that came about happened in an unintended fashion. The British did not intend to introduce them. For instance, they sought to introduce western education to create a western educated Indian middle class that would help the colonial rulers to continue their rule. A western educated section of Indians did emerge. But, instead of aiding British rule, they used western liberal ideas of democracy, social justice and nationalism to challenge colonial rule.

This should not, however, suggest that democratic values and democratic institutions are purely western. Our ancient epics, our diverse folk tales from one corner of the country to another are full of dialogues, discussions and contrasting positions. Think of any folk tale, riddles, folk song or any story from any epic that reveals different viewpoints? We just draw from one example from the epic Mahabharata.

However, as we saw in chapter 1 and 2 social change in modern India is not just about Indian or western ideas. It is a combination as well as reinterpretation of western and Indian ideas. We saw that in the case of the social reformers. We saw the use of both modern ideas of equality and traditional ideas of justice. Democracy is no exception. In colonial India the undemocratic and discriminatory administrative practice of British colonialism contrasted sharply with the vision of freedom which western theories of democracy espoused and which the western educated Indians read about. The scale of poverty and

The tradition of questioning

When, in the Mahabharata, Bhrigu tells Bharadvaja that caste division relates to differences in physical attributes of different human beings, reflected in skin colour, Bharadvaja responds not only by pointing to the considerable variations in skin colour within every caste (‘if different colours indicate different castes, then all castes are mixed castes’), but also by the more profound questions: “We all seem to be affected by desire, anger, fear, sorrow, worry, hunger and labour; how do we have caste differences then?”

(Sen 2005:10-11)
intensity of social discrimination within India also led to deeper questioning of the meaning of democracy. Is democracy just about political freedom? Or is it also about economic freedom and social justice? Is it also about equal rights to all irrespective of caste, creed, race and gender? And if that is so how can such equality be realised in an unequal society?

Society has been aiming to lay a new foundation as was summarised by the French revolution in three words, fraternity, liberty and equality. The French Revolution was welcomed because of this slogan. It failed to produce equality. We welcomed the Russian revolution because it aims to produce equality. But it cannot be too much emphasised that in producing equality, society cannot afford to sacrifice fraternity or liberty. Equality will be of no value without fraternity or liberty. It seems that the three can coexist only if one follows the way of the Buddha...

(Ambedkar 1992)

Many of these issues were thought of much before India became free. Even as India fought for its independence from British colonialism a vision of what Indian democracy ought to look like emerged. As far back as in 1928, Motilal Nehru and eight other Congress leaders drafted a constitution for India. In 1931, the resolution at the Karachi session of the Indian National Congress dwelt on how independent India’s constitution should look like. The Karachi Resolution reflects a vision of democracy that meant not just formal holding of elections but a substantive reworking of the Indian social structure in order to have a genuine democratic society.

The Karachi Resolution clearly spells out the vision of democracy that the nationalist movement in India had. It articulates the values that were further given full expression in the Indian Constitution. You will notice how the Preamble of the Indian Constitution seeks to ensure not just political justice but also social and economic justice. You will likewise notice that equality is not just about equal political rights but also of status and opportunity.
Appendix No. 6
What Swaraj will Include

Karachi Congress Resolution, 1931

Swaraj as conceived by the Congress should include real economic freedom of the masses. The Congress declares that no constitution will be acceptable to it unless it provides or enables the Swaraj Government to provide for:

1. Freedom of expression, association and meeting.
2. Freedom of religion.
3. Protection of all cultures and languages.
4. All citizens shall be equal before the law.
5. No disability in employment or trade or profession on account of religion, caste or sex.
6. Equal rights and duties for all in regard to public wells, schools, etc.
7. All to have right to bear arms in accordance with regulations.
8. No person to be deprived of property or liberty except in accordance with law.
10. Adult Suffrage.
11. Free compulsory primary education.
12. No titles to be conferred.
13. Capital punishment to be abolished.
14. Freedom of movement for every citizen of India and right to settle and acquire property in any part thereof, and equal protection of law.
15. Proper standard of life for industrial workers and suitable machinery for settlement of disputes between employers and workers and protection against old age, sickness, etc.
16. All labour to be free from conditions of serfdom.
17. Special protection of women workers.
18. Children not to be employed in mines and factories.
19. Rights of peasants and workers to form unions.
20. Reform of system of land revenue and tenure and rent, exempting rent and revenue for uneconomical holdings and reduction of dues payable for smaller holdings.
21. Inheritance tax on graduated scale.
22. Reduction of military expenditure by at least half.
23. No servant of State ordinarily to be paid above Rs 500 per month.
25. Protection of indigenous cloth against competition of foreign cloth.
26. Total prohibition of intoxicating drinks and drugs.
27. Currency and exchange in national interest.
28. Nationalisation of key industries and services, railways, etc.
29. Relief of agricultural indebtedness and control of usury.

Karachi resolution condensed to be printed on membership forms.
Democracy works at many levels. In this chapter we began with the vision of the Indian Constitution for this is the bedrock upon which democracy rests in India. Significantly, the Constitution emerged from intense and open discussions within the Constituent Assembly. Thus, its vision or ideological content as well as the process or procedure by which it was formed was democratic. The next section briefly looks at some of the debates.

**Constituent Assembly Debates: A History**

In 1939, Gandhiji wrote an article in the ‘Harijan’ called ‘The Only Way’ in which he said “... the Constituent Assembly alone can produce a constitution indigenous to the country and truly and fully representing the will of the people” one based on “unadulterated adult franchise for both men and women”. The popular demand in 1939 for a Constituent Assembly was, after several ups and downs conceded by Imperialist Britain in 1945. In July 1946, the elections were held. In August 1946, The Indian National Congress’ Expert Committee moved a resolution in the Constituent Assembly. This contained the declaration that India shall be a Republic where the declared social, economic and political justice will be guaranteed to all the people of India.

On matters of social justice, there were lively debates on whether government functions should be prescribed and the state should be bound down to them. Issues debated ranged from right to employment, to social security, land reforms to property rights, to the organisation of panchayats. Here are some snippets from the debates:
Snippets from the debates

- K.T. Shah said that the right to useful employment could and should be made real by a categoric obligation on the part of the state to provide useful work to every citizen who was able and qualified.

- B. Das spoke against classifying the functions of the government as justiciable and non justiciable, "I think it is the primary duty of Government to remove hunger and render social justice to every citizen and to secure social security........". The teeming millions do not find any hope that the Union Constitution.... will ensure them freedom from hunger, will secure them social justice, will ensure them a minimum standard of living and a minimum standard of public health"

- Ambedkar's answer was as follows: “The Draft Constitution as framed only provides a machinery for the government of the country. It is not a contrivance to install any particular party in power as has been done in some countries. Who should be in power is left to be determined by the people, as it must be, if the system is to satisfy the tests of democracy. But whoever captures power will not be free to do what he likes with it. In the exercise of it, he will have to respect these Instruments of Instructions which are called Directive Principles. He cannot ignore them. He may not have to answer for their breach in a court of law. But he will certainly have to answer for them before the electorate at election time. What great value these directive principles possess will be realised better when the forces of right contrive to capture power.”

- On land reform Nehru said, that the social forces were such that law could not stand in the way of reform, an interesting reflection on the dynamics between the two. “If law and Parliaments do not fit themselves into the changing picture, they cannot control the situation”.

- On the protection of the tribal people and their interests, leaders like Jaipal Singh were assured by Nehru in the following words during the Constituent Assembly debates: “It is our intention and our fixed desire to help them as possible; in as efficient a way as possible to protect them from possibly their rapacious neighbours occasionally and to make them advance"

- Even as the Constituent Assembly adopted the title Directive Principles of State Policy to the rights that courts could not enforce, additional principles were added with unanimous acceptance. These included K. Santhanam’s clause that the state shall organise village panchayats and endow them with the powers and authority to be effective units of local self government.

- T. A. Ramalingam Chettiar added the clause for promotion of cottage industries on co-operative lines in rural areas. Veteran parlimentarian Thakurdas Bhargava added that the state should organise agriculture and animal husbandry on modern lines.

**Exercise for Box 3.5**

Read the above snippets of the debates carefully. Discuss how different concerns were being expressed and debated. How relevant are these issues today?
COMPETING INTERESTS: THE CONSTITUTION AND SOCIAL CHANGE

India exists at so many levels. The multi-religious and multicultural composition of the population with distinct streams of tribal culture is one aspect of the plurality. Many divides classify the Indian people. The impact that culture, religion, and caste have on the urban–rural divide, rich-poor divide and the literate-illiterate divide is varied. Deeply stratified by caste and poverty, there are groupings and sub-groupings among the rural poor. The urban working class comprises a very wide range. Then, there is the well-organised domestic business class as also the professional and commercial class. The urban professional class is highly vocal. Competing interests operate on the Indian social scene and clamour for control of the State’s resources.

However, there are some basic objectives laid down in the Constitution and which are generally agreed in the Indian political world as being obviously just. These would be empowerment of the poor and marginalised, poverty alleviation, ending of caste and positive steps to treat all groups equally.

Competing interests do not always reflect a clear class divide. Take the issue of the close down of a factory because it emits toxic waste and affects the health of those around. This is a matter of life, which the Constitution protects. The flipside is that the closure will render people jobless. Livelihood again, is a matter of life that the Constitution protects. It is interesting that at the time of drawing up the Constitution, the Constituent Assembly was fully aware of this complexity and plurality but was intent on securing social justice as a guarantee.

CONSTITUTIONAL NORMS AND SOCIAL JUSTICE: INTERPRETATION TO AID SOCIAL JUSTICE

It is useful to understand that there is a difference between law and justice. The essence of law is its force. Law is law because it carries the means to coerce or force obedience. The power of the state is behind it. The essence of justice is fairness. Any system of laws functions through a hierarchy of authorities. The basic norm from which all other rules and authorities flow is called the Constitution. It is the document that constitutes a nation’s tenets. The Indian Constitution is India’s basic norm. All other laws are made as per the procedures the Constitution prescribes. These laws are made and implemented by the authorities specified by the Constitution. A hierarchy of courts (which too are authorities created by the Constitution) interpret the laws when there is a dispute. The Supreme Court is the highest court and the ultimate interpreter of the Constitution.

The Supreme Court has enhanced the substance of Fundamental Rights in the Constitution in many important ways. The Box below illustrates a few instances.

A Fundamental Right includes all that is incidental to it. The terse words of Article 21 recognising the right to life and liberty have been interpreted as including all that goes into a life of quality, including livelihood, health, shelter, education and dignity. In various pronouncements different attributes of ‘life’ have been expanded and ‘life’ has been explained to mean more than mere animal existence. These interpretations have been used to provide relief to prisoners subjected to torture and deprivation, release and rehabilitation of bonded labourers, against environmentally degrading activities, to provide primary health care and primary education. In 1993 the Supreme Court held that Right to Information is part of and incidental to the Right to Expression under Article 19(1) (a).

Reading Directive Principles into the content of Fundamental Rights. The Supreme Court read the Directive Principle of “equal pay for equal work” into the Fundamental Right to Equality under Article 14 and has provided relief to many plantation and agricultural labourers and to others.

The Constitution is not just a ready referencer of do’s and don’ts for social justice. It has the potential for the meaning of social justice to be extended. Social movements have also aided the Courts and authorities to interpret the contents of rights and principles in keeping with the contemporary understanding on social justice. Law and Courts are sites where competing views are debated. The Constitution remains a means to channelise and civilise political power towards social welfare.

You will realise that the Constitution has the capacity to help people because it is based on basic norms of social justice. For instance, the Directive Principle on village panchayats was moved as an amendment in the Constituent Assembly by K. Santhanam. After forty odd years it became a Constitutional imperative after the 73rd Amendment in 1992. You shall be dealing with this in the next section.
3.2 The Panchayati Raj and the Challenges of Rural Social Transformation

Ideals of Panchayati Raj

Panchayati Raj translates literally to ‘Governance by five individuals’. The idea is to ensure at the village or grass root level a functioning and vibrant democracy. While the idea of grassroot democracy is not an alien import to our country, in a society where there are sharp inequalities democratic participation is hindered on grounds of gender, caste and class. Furthermore, as you shall see in the newspaper reports later in the chapter, traditionally there have been caste panchayats in villages. But they have usually represented dominant groups. Furthermore, they often held conservative views and often have, and continue to take decisions that go against both democratic norms and procedures.

When the constitution was being drafted panchayats did not find a mention in it. At this juncture, a number of members expressed their sorrow, anger and disappointment over this issue. At the same time, drawing on his own rural experience Dr. Ambedkar argued that local elites and upper castes were so well entrenched in society that local self-government only meant a continuing exploitation of the downtrodden masses of Indian society. The upper castes would no doubt silence this segment of the population further. The concept of local government was dear to Gandhiji too. He envisaged each village as a self-sufficient unit conducting its own affairs and saw gram-swarajya to be an ideal model to be continued after independence.

It was, however, only in 1992 that grassroot democracy or decentralised governance was ushered in by the 73rd Constitutional Amendment. This act provided constitutional status to the Panchayati Raj Institutions (PRIs). It is compulsory now for local self-government bodies in rural and municipal areas to be elected every five years. More
Importantly, control of local resources is given to the elected local bodies.

The 73rd and 74th amendments to the Constitution ensured the reservation of one third of the total seats for women in all elected offices of local bodies in both the rural and urban areas. Out of this, 17 per cent seats are reserved for women belonging to the scheduled castes and tribes. This amendment is significant as for the first time it brought women into elected bodies which also bestowed on them decision making powers. One third of the seats in local bodies, gram panchayats, village panchayats, municipalities, city corporations and district boards are reserved for women. The 1993-94 elections, soon after the 73rd amendment brought in 800,000 women into the political processes in a single election. That was a big step indeed in enfranchising women. A constitutional amendment prescribed a three-tier system of local self-governance (read Box 3.7 on the last page) for the entire country, effective since 1992-93.

**Powers and Responsibilities of Panchayats**

According to the Constitution, Panchayats should be given powers and authority to function as institutions of self-government. It, thus, requires all state governments to revitalise local representative institutions.

The following powers and responsibility were delegated to the Panchayats:

- to prepare plans and schemes for economic development
- to promote schemes that will enhance social justice
- to levy, collect and appropriate taxes, duties, tolls and fees
- help in the devolution of governmental responsibilities, especially that of finances to local authorities

Social welfare responsibilities of the Panchayats include the maintenance of burning and burial grounds, recording statistics of births and deaths, establishment of child welfare and maternity centres, control of cattle
Panchayati Raj Ministry prepares software to aid transfer of funds

Special Correspondent

NEW DELHI: The Union Panchayati Raj Ministry has prepared a software to maintain databases of bank accounts of all Panchayat Raj Institutions (PRIs) to facilitate the transfer of funds through banking channels, preferably electronically.

Once the data is entered, money can be transferred directly to the 2,40,000 PRIs from the State’s Consolidated Fund. Karnataka has already implemented this system, using the fast expanding electronic network of banks to transfer funds from the State treasury to individual panchayats. Here, the State Government sends 12th Finance Commission funds and its own undisbursed statutory grants to all panchayats directly from the State Department of Panchayati Raj through banks without any intermediary.

The arrangement involves six nationalised and 12 gramin banks, in which all 5,000 panchayats at all levels hold accounts. This has reduced the time taken for funds to reach each panchayat from two months to 12 days. The Ministry of Finance has indicated its willingness to work with the Panchayati Raj Ministry towards developing a consensus on adoption of this tool kit, across Central ministries and State Governments.

The 12th Finance Commission has recommended that a sum of Rs. 20,000 be made available as grants to the State Governments between 2005-2011 to augment the Consolidated Fund at State level to facilitate the supplementation of the financial resources placed at the disposal of the panchayats. The Union Finance Ministry has also mandated that these funds must invariably be transferred to panchayats within 15 days of their being credited to State Consolidated Fund.

The Finance Ministry guidelines also make it clear that grants will not be released to a State where elections to the panchayats have not been held, each State Finance Secretary would be required to provide a certificate within 15 days of the release of each instalment by the Government certifying the dates and amounts of local grants received by the State from the Government, and the dates and amounts of grants released by the State to the PRIs.

In the case of delayed transfers to the PRIs from the State, an amount of interest at the rate equal to the Reserve Bank of India rate has to be additionally paid by the State to the PRIs, for the period of delay.

The development activities include the construction of roads, public buildings, wells, tanks and schools. They also promote small cottage industries and take care of minor irrigation works. Many government schemes like the Integrated Rural Development Programme (IRDP) and Integrated Child Development Scheme (ICDS) are monitored by members of the panchayat.

The main income of the Panchayats is from tax levied on property, profession, animals, vehicles, cess on land revenue and rentals. The resources are further increased by the grants received through the Zilla Panchayat. It is also considered compulsory for Panchayat offices to put up boards outside their offices, listing the break up of funds received, and utilisation of the financial aid received. This exercise was taken up to ensure that people at the grassroots level should have the ‘right to information’ – opening all functioning to the public eye. People had the right to scrutinise allocation of money. And ask reasons for decisions that were taken for the welfare and development activities of the village.

Nyaya Panchayats have been constituted in some states. They possess the authority to hear some petty, civil and criminal cases. They can impose fines but cannot award a sentence. These village courts have often been successful in bringing about an agreement amongst contending parties. They have been particularly effective in punishing men who harass women for dowry and perpetrate violence against them.

Panchayati Raj in Tribal Areas

Kalavati, a Dalit by caste was apprehensive about standing for elections. She is a Panchayat member and realises that her confidence and self-esteem has grown over since she became a member of the panchayat. Most importantly ‘she has a name’. Before she became a member of the panchayat she was only called as ‘Ramu’s mother’ or ‘Hiralal’s wife’. If she lost the election for the post of the Pradhan she felt ‘sakhiyan ki nak kat jaye’ (her friends would lose face).

Source: This was recorded by Mahila Samakhya, an NGO working towards Rural Women’s Empowerment.
**Van Panchayats**

In Uttarakhand, women do most of the work since the men are often posted far away in defence services. Most of the villagers are still dependent on firewood for cooking. As you may know, deforestation is a big problem in the mountainous regions. Women sometimes walk many miles to collect firewood and fodder for their animals. To overcome this problem, women have set up van-panchayats. Members of the van-panchayats develop nurseries and nurture tree saplings for planting on the hill slopes. Members also police nearby forests to keep an eye on illegal felling of trees. The Chipko movement, where women hugged trees to prevent them from being cut, had its beginnings in this area.

**Panchayati Raj training for illiterate women**

Innovative modes of communicating the strength of the Panchayat Raj system

The story of two villages, Sukhipur and Dhukipur are unravelled through a cloth ‘phad’ or a scroll (a traditional folk medium of story telling). Village Dhukipur (sad village) has a corrupt Pradhan (Bimla), who has spent the money received from the panchayat for building a school, on constructing a house for herself and her family. The rest of the village are sad and poor. On the other hand Sukhipur (happy village) has a content populace as the Pradhan (Najma) has invested rural reconstruction money in developing good infrastructure for her village. Here the primary health centre is functioning, it has a ‘pucca’ building and also has a good road so that buses can reach the village.

Pictorial pictures on the ‘phad’, accompanied with folk music were useful tools to convey the message for able governance and participation. This innovative method of story telling was very affective in bringing awareness to unlettered women. Most importantly the campaign conveyed the message, that it was not enough to merely vote, or to stand for election, or to win. But important to know why one is voting for a particular person, what are the traits to look for, and what does he or she stand for .The value for integrity is also emphasised through the story and song media of the ‘phad’.

This training programme was conducted by Mahila Samakhya an NGO working towards Rural Women’s Empowerment.
Many tribal areas have had a rich tradition of grassroot democratic functioning. We give an illustrative example from Meghalaya. All the three major ethnic tribal groups, namely, the Khasis, Jaintias and the Garos have their own traditional political institutions that have existed for hundreds of years. These political institutions were fairly well-developed and functioned at various tiers, such as the village level, clan level and state level. For instance, in the traditional political system of the Khasis each clan had its own council known as the ‘Durbar Kur’ which was presided over by the clan headman. Though there is a long tradition of grassroot political institutions in Meghalaya, a large chunk of tribal areas lie outside the provisions of the 73rd Amendment. This may be because the concerned policy makers did not wish to interfere with the traditional tribal institutions.

However, as sociologist Tiplut Nongbri remarks that tribal institutions in themselves need not necessarily be democratic in its structure and functioning. Commenting on the Bhuria Committee Report that went into this issue Nongbri remarks that while the Committee’s concern for the traditional tribal institutions is appreciable, it fails to take stock of the complexity of the situation. For notwithstanding the strong egalitarian ethos that characterised tribal societies the element of stratification is not altogether absent. Tribal political institutions are not only marked by open intolerance to women but the process of social change has also introduced sharp distortions in the system, making it difficult to identify which is traditional and which is not. (Nongbri 2003: 220) This again brings you back to the changing nature of tradition that we discussed in chapter 1 and 2.

Democratisation and Inequality

It will be clear to you that democratisation is not easy in a society that has had a long history of inequality based on caste, community and gender. You have dealt with the different kinds of inequality in the earlier book. In chapter 4 you will get a fuller sense of rural Indian structure. Given this unequal and undemocratic social structure, it is not surprising that in many cases, certain members belonging to particular groups, communities, castes of the village are not included or informed about meetings and activities of the village. The Gram Sabha members are often controlled by a small coterie of rich landlords usually hailing from the upper castes or landed peasantry. They make decisions on development activities, allocate funds, leaving the silent majority as mere onlookers.

The reports in the boxes below show different kind of experiences at the grassroot level. One shows how traditional panchayats are being used. Another reports on how the new institution of Panchayati Raj, in some cases, are truly bringing in radical changes. Yet another on how democratic measures do not often work out in practice because interest groups resist change and money matters.
Box 3.11
Bound by Honour
Caste panchayats are reasserting themselves as guardians of village morality....The first case that hit the headlines was in October 2004, when the Rathi khap panchayat in Asanda village of Jhajjar district ordered Sonia, who had already been married a year by then, to dissolve her marriage with Ram Pal, abort her unborn child and accept her husband as a brother if she wanted to stay in the village. The couple’s fault: sharing the same gotra even though the Hindu Marriage Act recognises such unions. Sonia and Ram Pal could live together again only after the high court directed the Haryana government to provide them security.

...One such jaati panchayat of Ansaris in Muzafarnagar decided in June last year that Imrana’s rape by her father-in-law had made her a mother to her husband. Another in a Meerut village ruled that Gudiya, pregnant with the child of her second husband, should return to her first who had reappeared after five years.

Box 3.12
Role of wealth and privilege? Role of villagers?
This time around, Soompa sarpanch seat fell within the quota reserved for women. Nevertheless panchayat residents considered this as a contest between the candidates’ husbands and a face-off among ‘equals’. On one hand was the incumbent sarpanch, Ram Rai Mewada who owns a liqour shop in Kekri and on the other Chand Singh Thakur, a rich landowner from the same village. Interestingly, Mewada had been exposed by the village residents for faking muster rolls in the drought relief works during 2002-03.

Although no action was taken against him, the villagers were determined to see him out of office this time and thus put up the thakur for a stiff competition. The residents of Sooma unanimously decided that the thakur was best suited to oppose Mewada...

Box 3.13
Role of social movements and organisations for greater participation and information
One such meeting took place on January 24 in Dhorela village (Kushalpura panchayat). The meeting was publicised by going from door-to-door and through announcements by gathering children, teaching them slogans where a worker from a very well reputed NGO led them around the village as they urged people to come to the chaupal for the meeting. Tara’s (the local NGO supported candidate) ghoshana patra (manifestoe) was read out and she made a short speech. Her ghoshana patra...included not just taking of bribes as sarpanch, not spending more than Rs. 2,000 on campaigning, etc. ...

Distribution of alcohol and gur, and the use of jeeps are frequently used means of buying votes and contribute to campaign expenditure. ...The entire chain of corruption is explained to the gathered villagers: low cost elections not only allow the poor to participate, they also make corruption-free panchayats possibility.

Exercise for Boxes 3.11, 3.12 and 3.13
Read the boxes above carefully and discuss:
- The role of wealth
- The role of people
- The role of women
You will recall that this chapter began with the oft quoted definition of democracy as a form of government that is of the people, by the people and for the people. As the chapter unfolded you would have noticed how this definition captures the spirit of democracy but conceals the many divisions between one group of people and another. You have seen how interests and concerns are different. We have seen in section II on the Indian Constitution how different groups sought to represent their interests within the Constituent Assembly. We also saw in the story of Indian democracy the contending interests of different groups. A look at the newspaper every morning will show you many instances where different groups seek to make their voices heard. And draw the attention of the government to their grievances.

The question, however, arises whether all interest groups are comparable. Can an illiterate peasant or literate worker make her case to the government as coherently and convincingly as an industrialist? Neither the industrialist nor the peasant or worker, however, represents their case as individuals. Industrialists form associations such as Federation of Indian Chambers and Commerce (FICCI) and Association of Chambers of Commerce (ASSOCHAM). Workers form trade unions such as the Indian Trade Union Congress (INTUC) or the Centre for Indian Trade Unions (CITU). Farmers form agricultural unions such as Shetkari Sangathan. Agricultural labourers have their own unions. You will read about other kinds of organisations and social movements like tribal and environmental movements in the last chapter.

In a democratic form of government political parties are key actors. A political party may be defined as an organisation oriented towards achieving legitimate control of government through an electoral process. Political Party is an organisation established with the aim of achieving governmental power and using that power to pursue a specific programme. Political parties are based on certain understanding of society and how it ought to be. In a democratic system the interests of different groups are also represented by political parties, who take up their case. Different interest groups will work towards influencing political parties. When
certain groups feel that their interests are not being taken up, they may move to form an alternative party. Or they form pressure groups who lobby with the government. Interest Groups are organised to pursue specific interests in the political arena, operating primarily by lobbying the members of legislative bodies. In some situations, there may be political organisations which seek to achieve power but are denied the opportunity to do so through standard means. These organisations are best regarded as movements until they achieve recognition.

Every year at the tail end of February the Finance Minister of the Government of India presents the Budget to the Parliament. Prior to this there are reports every day in the newspaper of the meetings that the various confederation of Indian industrialists, of trade unions, farmers, and more recently women’s groups had with the Ministry of Finance.

**Exercise for Box 3.14**

Can they be understood as pressure groups?

It is obvious that all groups will not have the same access or the same ability to pressurise the government. Some, therefore, argue that the concept of pressure groups underestimate the power that dominant social groups such as class or caste or gender have in society. They feel that it would be more accurate to suggest that dominant class or classes control the state. This does not negate the fact that social movements and pressure groups also continue to play a very important role in a democracy. Chapter 8 shows this.

---

**Max Weber on Parties**

Whereas the genuine place of classes is within the economic order, the place of status groups is within the social order... But parties live in a house of power...

Party actions are always directed towards a goal which is striven for in a planned manner. The goal may be a ‘cause’ (the party may aim at realising a program for ideal or material purposes), or the goal may be ‘personal’ (sinecures, power, and from these, honour for the leader and followers of the party).

(Weber 1948: 194)

**Exercise for Box 3.16**

- Read the box on the next page carefully. You can also draw from other similar events in other towns and cities.
- Identify the interests of the poor, the serving class, the middle class and the rich.
- How do the different groups see the role of the street?
- Discuss what you think is the role of the government?
  - What is the role of consultancy firms like McKinsey? Whose interests do they represent?
  - What is the role of political parties?
- Do you think the poor can influence political parties more than they can influence consultancy firms? Is it because political parties are accountable to the people that is i.e., they can be voted out?
We illustrate how these contending interests function through the concrete example of developments in the city of Mumbai.

Recent years have seen a great focus on making Indian cities global cities. For urban planners and dreamers, Mumbai urgently needs north-south and east-west connectivity. Towards this, they argue for the need to construct an ‘express ring freeway’ to circle the city ‘such that a freeway can be accessed from any point in the city in less than 10 minutes’. ‘Quick entry and exit’, and ‘efficient traffic dispersal’ are seen as critical to the smooth functioning of the city.

For the less privileged the streets have a different role to play. They are more than freeways of connectivity. Streets, for good or bad, all too often become effectively bazaars, and melas combining the different purposes of pilgrimage, recreation (transportation) and economic exchange. As people blur the boundaries between public and private space by living on the street, buying and selling, eating, drinking tea, playing cricket or even just standing, urban planners point to how these activities impeded traffic and cause congestion.

In order to decongest, poor people are shifted to the outskirts. In the Vision Mumbai document prepared by the private consultancy from McKinsey…mass housing for the poor is being planned in the salt pan lands outside the city. What happens to their livelihood? The long quote below captures the voice of the poor.

“We are in fact human earthmovers and tractors. We levelled the land first. We have contributed to the city. We carry your shit out of the city. I don’t see citizens’ groups dredging sewers and digging roads. The city is not for the rich only. We need each other. I don’t beg. I wash your clothes. Women can go to work because we are there to look after their children. The staff in Mantralay, the collectorate, the BMC, even the police live in slums. Because we are there, women can walk safely at night….Groups such as Bombay First talk about Mumbai a world class city. How can it be a world-class city without a place for its poor? (Anand 2006: 3422)
1. Interest groups are part and parcel of a functioning democracy. Discuss.

2. Read the snippets from the debates held in the Constituent Assembly. Identify the interest groups. Discuss what kind of interest groups exist in contemporary India. How do they function?

3. Create a phad or a scroll with your own mandate when standing for school election. (this could be done in small groups of 5, like a panchayat)

4. Have you heard of Bal Panchayats and Mazdoor Kissan Sanghathan? If not, find out and write a note about them in about 200 words.

5. The 73rd amendment has been monumental in bringing a voice to the people in the villages. Discuss.

5. Write an essay on the ways that the Indian Constitution touches peoples’ everyday life, drawing upon different examples.

REFERENCES

4 Change and Development in Rural Society
Indian society is primarily a rural society though urbanisation is growing. The majority of India’s people live in rural areas (67 per cent, according to the 2001 Census). They make their living from agriculture or related occupations. This means that agricultural land is the most important productive resource for a great many Indians. Land is also the most important form of property. But land is not just a ‘means of production’ nor just a ‘form of property’. Nor is agriculture just a form of livelihood. It is also a way of life. Many of our cultural practices and patterns can be traced to our agrarian backgrounds. You will recall from the earlier chapters how closely interrelated structural and cultural changes are. For example, most of the New Year festivals in different regions of India – such as Pongal in Tamil Nadu, Bihu in Assam, Baisakhi in Punjab and Ugadi in Karnataka to name just a few – actually celebrate the main harvest season and herald the beginning of a new agricultural season. Find out about other harvest festivals.

There is a close connection between agriculture and culture. The nature and practice of agriculture varies greatly across the different regions of the country. These variations are reflected in the different regional cultures. One can say that both the culture and social structure in rural India are closely bound up with agricultural and the agrarian way of life.

Agriculture is the single most important source of livelihood for the majority of the rural population. But the rural is not just agriculture. Many activities that support agriculture and village life are also sources of livelihood for people in rural India. For example, a large number of artisans such as potters, carpenters, weavers, ironsmiths, and goldsmiths are found in rural areas. They were once part and parcel of the village economy. Their numbers have been steadily lessening since the colonial period. You have already read in Chapter 1 how the influx of manufactured goods replaced hand-made products.

Rural life also supported many other specialists and crafts persons as storytellers, astrologers, priests, water-distributors, and oil-pressers. The diversity
of occupations in rural India was reflected in the caste system, which in most regions included specialist and ‘service’ castes such as Washermen, Potters, and Goldsmiths. Some of these traditional occupations have declined. But increasing interconnection of the rural and urban economies have led to many diverse occupations. Many people living in rural areas are employed in, or have livelihoods based in, rural non-farm activities. For instance, there are rural residents employed in government services such as the Postal and Education Departments, factory workers, or in the army, who earn their living through non-agricultural activities.

**Activity 4.1**

- Think of an important festival that is celebrated in your region that has its roots in agrarian society. What is the significance of the various practices or rituals that are associated with that festival, and how are they linked to agriculture?
- Most towns and cities in India have grown and encompassed surrounding villages. Can you identify an area of the city or town where you live that used to be a village, or areas that were once agricultural land? How do you think this growth takes place, and what happens to the people who used to make a living from that land?
4.1 **Agrarian Structure: Caste and Class in Rural India**

Agricultural land is the single most important resource and form of property in rural society. But it is not equally distributed among people living in a particular village or region. Nor does everyone have access to land. In fact, the distribution of landholdings in most regions is highly unequal among households. In some parts of India the majority of rural households own at least some land – usually very small plots. In other areas as much as 40 to 50 per cent of families do not own any land at all. This means that they are dependent on agricultural labour or other kinds of work for their livelihoods. This of course means that a few families are well-to-do. The majority live just above or below the poverty line.

In most regions of India, women are usually excluded from ownership of land, because of the prevailing patrilineal kinship system and mode of inheritance. By law women are supposed to have an equal share of family property. In reality they only have limited rights and some access to land only as part of a household headed by a man.

The term agrarian structure is often used to refer to the structure or distribution of landholding. Because agricultural land is the most important productive resource in rural areas, access to land shapes the rural class structure. Access to land largely determines what role one plays in the process of agricultural production. **Medium and large landowners** are usually able to earn sufficient or even large incomes from cultivation (although this depends on agricultural prices, which can fluctuate greatly, as well as other factors such as the monsoon). But **agricultural labourers** are more often than not paid below the statutory minimum wage and earn very little. Their incomes are low. Their employment is insecure. Most agricultural labourers are daily-wage workers. And do not have work for many days of the year. This is known as underemployment. Similarly, **tenants** (cultivators who lease their land from landowners) have lower incomes than owner-cultivators. Because they have to pay a substantial rent to the landowner – often as much as 50 to 75 per cent of the income from the crop.

Agrarian society, therefore, can be understood in terms of its class structure. But we must also remember structure that it is through the caste system. In rural areas, there is a complex relationship between caste and class. This relationship is not always straightforward. We might expect that the higher castes have more land and higher incomes. And that there is a correspondence between caste and class as one moves down the hierarchy. In many areas this is broadly true but not exactly. For instance, in most areas the highest caste, the Brahmans, are not major landowners, and so they fall outside the agrarian structure although they are a part of rural society. In most regions of India,
the major landowning groups belong to the upper castes. In each region, there are usually just one or two major landowning castes, who are also numerically very important. Such groups were termed by the sociologist M.N. Srinivas as dominant castes. In each region, the dominant caste is the most powerful group, economically and politically, and dominates local society. Examples of dominant landowning groups are the Jats and Rajputs of U.P., the Vokkaligas and Lingayats in Karnataka, Kammas and Reddis in Andhra Pradesh, and Jat Sikhs in Punjab.

While dominant landowning groups are usually middle or high ranked castes, most of the marginal farmers and landless belong to lower caste groups. In official classification they belong to the Scheduled Castes or Tribes (SC/STs) or Other Backward Classes (OBCs). In many regions of India, the former ‘Untouchable’ or dalit castes were not allowed to own land and they provided most of the agricultural labour for the dominant landowning groups. This also created a labour force that allowed the landowners to cultivate the land intensively and get higher returns.

The rough correspondence between caste and class means that typically the upper and middle castes also had the best access to land and resources, and hence to power and privilege. This had important implications for the rural economy and society. In most regions of the country, a ‘proprietary caste’ group owns most of the resources and can command labour to work for them. Until recently, practices such as begar or free labour were prevalent in many parts of northern India. Members of low ranked caste groups had to provide labour for a fixed number of days per year to the village zamindar or landlord. Similarly, lack of resources, and dependence on the landed class for economic, social, and political support, meant that many of the working poor were tied to landowners in ‘hereditary’ labour relationships (bonded labour), such as the halpati system in Gujarat (Breman, 1974) and the jeeta system in Karnataka. Although such practices have been abolished legally, they continue to exist in many areas. In a village of northern Bihar, the majority of the landowners are Bhumihars, who are also the dominant caste.
4.2 The Impact of Land Reforms

The Colonial Period

There are historical reasons why each region of India came to be dominated by just one or two major groups. But it is important to realise that this agrarian structure has changed enormously over time, from the pre-colonial to the colonial and after independence. While the same dominant castes were probably also cultivating castes in the pre-colonial period, they were not the direct owners of land. Instead, ruling groups such as the local kings or zamindars (landlords who were also politically powerful in their areas, and usually belonged to Kshatriya or other high castes) controlled the land. The peasants or cultivators who worked the land had to hand over a substantial portion of the produce to them. When the British colonised India, in many areas they ruled through these local zamindars. They also granted property rights to the zamindars. Under the British, the zamindars were given more control over land than they had before. Since the colonisers also imposed heavy land revenue (taxes) on agriculture, the zamindars extracted as much produce or money as they could out of the cultivators. One result of this zamindari system was that agricultural production stagnated or declined during much of the period of British rule. For peasants fled from oppressive landlords and frequent famines and wars decimated the population.

Many districts of colonial India were administered through the zamindari system. In other areas that were under direct British rule had what was called the raiyatwari system of land settlement (raiyat means cultivator in Telugu). In this system, the ‘actual cultivators’ (who were themselves often landlords and not cultivators) rather than the zamindars were responsible for paying the tax. Because the colonial government dealt directly with the farmers or landlords, rather than through the overlords, the burden of taxation was less and cultivators had more incentive to invest in agriculture. As a result, these areas became relatively more productive and prosperous.

This background about land revenue administration in colonial India – much of which you have learned in your history books – is important to keep in mind when studying the agrarian structure of present-day India. This is because it is through a series of changes starting in this period that the current structure evolved.

Independent India

After India became independent, Nehru and his policy advisors embarked on a programme of planned development that focused on agrarian reform as well as industrialisation. The policy makers were responding to the dismal agricultural situation in India at that time. This was marked by low productivity, dependence on imported food grains, and the intense poverty of a large section of the rural
population. They felt that a major reform in the agrarian structure, and especially in the landholding system and the distribution of land, was necessary if agriculture were to progress. From the 1950s to the 1970s, a series of land reform laws were passed – at the national level as well as in the states – that were intended to bring about these changes.

The first important legislation was the abolition of the zamindari system, which removed the layer of intermediaries who stood between the cultivators and the state. Of all the land reform laws that were passed, this was probably the most effective, for in most areas it succeeded in taking away the superior rights of the zamindars over the land and weakening their economic and political power. This did not happen without a struggle, of course, but ultimately the effect was to strengthen the position of the actual landholders and cultivators at the local level. However, zamindari abolition did not wipe out landlordism or the tenancy or sharecropping systems, which continued in many areas. It only removed the top layer of landlords in the multi-layered agrarian structure.

Among the other major land reform laws that were introduced were the tenancy abolition and regulation acts. They attempted either to outlaw tenancy altogether or to regulate rents to give some security to the tenants. In most of the states, these laws were never implemented very effectively. In West Bengal and Kerala, there was a radical restructuring of the agrarian structure that gave land rights to the tenants.

The third major category of land reform laws were the Land Ceiling Acts. These laws imposed an upper limit on the amount of land that can be owned by a particular family. The ceiling varies from region to region, depending on the kind of land, its productivity, and other such factors. Very productive land has a low ceiling while unproductive dry land has a higher ceiling limit. According to these acts, the state is supposed to identify and take possession of surplus land (above the ceiling limit) held by each household, and redistribute it to landless families and households in other specified categories, such as SCs and STs. But in most of the states these acts proved to be toothless. There were many loopholes and other strategies through which most landowners were able to escape from having their surplus land taken over by the state. While some very large estates were broken up, in most cases landowners managed to divide the land among relatives and others, including servants, in so-called ‘benami transfers’ – which allowed them to keep control over the land (in fact if not in name). In some places, some rich farmers actually divorced their wives (but continued to live with them) in order to avoid the provisions of the Land Ceiling Act, which allowed a separate share for unmarried women but not for wives.

The agrarian structure varies greatly across India, and the progress of land reforms has also been uneven across the states. On the whole, however, it can
be said that the agrarian structure, although it has changed substantially from colonial times to the present, remains highly unequal. This structure puts constraints on agricultural productivity. Land reforms are necessary not only to boost agricultural growth but also to eradicate poverty in rural areas and bring about social justice.

4.3 THE GREEN REVOLUTION AND ITS SOCIAL CONSEQUENCES

We saw that land reforms have had only a limited impact on rural society and the agrarian structure in most regions. In contrast the Green Revolution of the 1960s and 1970s brought about significant changes in the areas where it took place. The Green Revolution, as you know, was a government programme of agricultural modernisation. It was largely funded by international agencies that was based on providing high-yielding variety (HYV) or hybrid seeds along with pesticides, fertilisers, and other inputs, to farmers. Green Revolution programmes were introduced only in areas that had assured irrigation, because sufficient water was necessary for the new seeds and methods of cultivation. It was also targeted mainly at the wheat and rice-growing areas. As a result, only certain regions such as the Punjab, western U.P., coastal Andhra Pradesh, and parts of Tamil Nadu, received the first wave of the Green Revolution package. The rapid social and economic transformations that were seen in these areas stimulated a spate of studies by social scientists, and vigorous debates about the impact of the Green Revolution.

Agricultural productivity increased sharply because of the new technology. India was able to become self-sufficient in food grain production for the first time in decades. The Green Revolution has been considered a major achievement of the government and of the scientists who contributed to the effort. However, there were certain negative social effects that were pointed out by sociologists who studied the Green Revolution areas, as well as adverse environmental impacts.

In most of the Green Revolution areas, it was primarily the medium and large farmers who were able to benefit from the new technology. This was because inputs were expensive, and small and marginal farmers could not afford to spend as much as large farmers to purchase these inputs. When agriculturists produce primarily for themselves and are unable to produce for the market, it is known as ‘subsistence agriculture’ and they are usually termed ‘peasants’. Agriculturists or farmers are those who are able to produce surplus, over and above the needs of the family, and so are linked to the market. It was the farmers who were able to produce a surplus for the market who were able to reap the most benefits from the Green Revolution and from the commercialisation of agriculture that followed.
Thus, in the first phase of the Green Revolution, in the 1960s and 1970s, the introduction of new technology seemed to be increasing inequalities in rural society. Green Revolution crops were highly profitable, mainly because they yielded more produce. Well-to-do farmers who had access to land, capital, technology, and know-how, and those who could invest in the new seeds and fertilisers, could increase their production and earn more money. However, in many cases it led to the displacement of tenant-cultivators. For landowners began to take back land from their tenants and cultivate it directly because cultivation was becoming more profitable. This made the rich farmers better off, and worsened the condition of the landless and marginal holders.

In addition, the introduction of machinery such as tillers, tractors, threshers, and harvesters (in areas such as Punjab and parts of Madhya Pradesh) led to the displacement of the service caste groups who used to carry out these agriculture-related activities. This process of displacement also increased the pace of rural-urban migration.

The ultimate outcome of the Green Revolution was a process of ‘differentiation’, in which the rich grew richer and many of the poor stagnated or grew poorer. It should be noted that employment and wages for agricultural workers did increase in many areas, because the demand for labour increased. Moreover, rising prices and a shift in the mode of payment of agricultural workers from payment in kind (grain) to cash, actually worsened the economic condition of most rural workers.

Following the first phase of the Green Revolution, the second phase is currently being introduced in the dry and semi-arid regions of India. In these areas there has been a significant shift from dry to wet (irrigated) cultivation, along with changes in the cropping pattern and type of crops grown. Increasing commercialisation and dependence on the market in these areas (for instance, where cotton cultivation has been promoted) has increased rather than reduced livelihood insecurity, as farmers who once grew food for consumption now depend on the market for the incomes. In market-oriented cultivation, especially where a single crop is grown, a fall in prices or a bad crop can spell financial ruin for farmers. In most of the Green Revolution areas, farmers have switched from a multi-crop system, which allowed them to spread risks, to a mono-crop regime, which means that there is nothing to fall back on in case of crop failure.

Another negative outcome of the Green Revolution strategy was the worsening of regional inequalities. The areas that underwent this technological transformation became more developed while other areas stagnated. For instance, the Green Revolution was promoted more in the western and southern parts of the country, and in Punjab, Haryana, and western U.P., than in the eastern parts of the country (Das, 1999). As a result, we find agriculture in states such as Bihar and in eastern U.P., and in dry regions such as Telengana, to be relatively undeveloped. These are also the regions that continue to have an entrenched ‘feudal’ agrarian structure, in which the landed castes and
landlords maintain power over the lower castes, landless workers and small cultivators. The sharp caste and class inequalities, together with exploitative labour relations, in these regions has given rise to various kinds of violence (including inter-caste violence) in recent years.

Often it is thought that imparting knowledge of ‘scientific’ farming methods will improve the conditions of Indian farmers. We should remember that Indian farmers have been cultivating the land for centuries, much before the advent of the Green Revolution. They have very deep and extensive traditional knowledge about the land they till and the crops they sow. Much of this knowledge, like the many traditional varieties of seeds that were developed over the centuries by farmers, is being lost as hybrid, high-yielding, and genetically modified varieties of seeds are being promoted as more productive and ‘scientific’ (Gupta 1998; Vasavi 1999b). In view of the negative environmental and social impact of modern methods of cultivation that have been observed, a number of scientists as well as farmers’ movements now suggest a return to traditional, more organic seeds and methods of cultivation. Many rural people themselves believe that hybrid varieties are less healthy than the traditional ones.

### 4.4 Transformations in Rural Society after Independence

Several profound transformations in the nature of social relations in rural areas took place in the post-Independence period, especially in those regions that underwent the Green Revolution. These included:

- an increase in the use of agricultural labour as cultivation became more intensive;
- a shift from payment in kind (grain) to payment in cash;
- a loosening of traditional bonds or hereditary relationships between farmers or landowners and agricultural workers (known as bonded labour);
- and the rise of a class of ‘free’ wage labourers’.

The change in the nature of the relationship between landlords (who usually belonged to the dominant castes) and agricultural workers (usually low caste), was described by the sociologist Jan Breman as a shift from ‘patronage to...
exploitation’ (Breman, 1974). Such changes took place in many areas where agriculture was becoming more commercialised, that is, where crops were being grown primarily for sale in the market. The transformation in labour relations is regarded by some scholars as indicative of a transition to capitalist agriculture. Because the capitalist mode of production is based on the separation of the workers from the means of production (in this case, land), and the use of ‘free’ wage labour. In general, it is true that farmers in the more developed regions were becoming more oriented to the market. As cultivation became more commercialised, these rural areas were also becoming integrated to the wider economy. This process increased the flow of money into villages and expanding opportunities for business and employment. But we should remember that this process of transformation in the rural economy, in fact, began during the Colonial period. In many regions in the 19th century, large tracts of land in Maharashtra were given over to cotton cultivation, and cotton farmers became directly linked to the world market. However, the pace and spread of change rapidly increased after Independence, as the government promoted modern methods of cultivation and attempted to modernise the rural economy through other strategies. The state invested in the development of rural infrastructure, such as irrigation facilities, roads and electricity, and on the provision of agricultural inputs, including credit through banks and cooperatives. For regular agricultural growth, uninterrupted power supply to rural India is one of the necessities. The recently launched Deen Dayal Upadhyaya Gram Jyoti Yojana is an effort of the Indian government in this direction. The overall outcome of these efforts at ‘rural development’ was not only to transform the rural economy and agriculture, but also the agrarian structure and the rural society itself.
One way in which rural social structure was altered by agricultural development in the 1960s and 1970s was through the enrichment of the medium and large farmers who adopted the new technologies, discussed in the previous section. In several agriculturally rich regions, such as coastal Andhra Pradesh, western Uttar Pradesh, and central Gujarat, well-to-do farmers belonging to the dominant castes began to invest their profits from agriculture in other types of business ventures. This process of diversification gave rise to new entrepreneurial groups that moved out of rural areas and into the growing towns of these developing regions, giving rise to new regional elites that became economically as well as politically dominant (Rutten 1995). Along with this change in the class structure, the spread of higher education, especially private professional colleges, in rural and semi-urban areas, allowed the new rural elites to educate their children – many of whom then joined professional or white collar occupations or started businesses, feeding into the expansion of the urban middle classes.

Thus, in areas of rapid agricultural development there has been a consolidation of the old landed or cultivating groups, who have transformed themselves into a dynamic entrepreneurial, rural-urban dominant class. But in other regions such as eastern U.P. and Bihar, the lack of effective land reforms, political mobilisation, and redistributive measures has meant that there have been relatively few changes in the agrarian structure and hence in the life conditions of most people. In contrast, states such as Kerala have undergone a different process of development, in which political mobilisation, redistributive measures, and linkages to an external economy (primarily the Gulf countries) have brought about a substantial transformation of the rural countryside. Far from the rural being primarily agrarian, the rural in Kerala is a mixed economy that integrates some agriculture with a wide network of retail sales and services, and where a large number of families are dependent on remittances from abroad.
Another significant change in rural society that is linked to the commercialisation of agriculture has been the growth of migrant agricultural labour. As ‘traditional’ bonds of patronage between labourers or tenants and landlords broke down, and as the seasonal demand for agricultural labour increased in prosperous Green Revolution regions such as the Punjab, a pattern of seasonal migration emerged in which thousands of workers circulate between their home villages and more prosperous areas where there is more demand for labour and higher wages. Labourers migrate also due to the increasing inequalities in rural areas from the mid-1990s, which have forced many households to combine multiple occupations to sustain themselves. As a livelihood strategy, men migrate out periodically in search of work and better wages, while women and children are often left behind in their villages with elderly grandparents. Migrant workers come mainly from drought-prone and less productive regions, and they go to work for part of the year on farms in the Punjab and Haryana, or on brick kilns in U.P., or construction sites in cities such as New Delhi or Bangalore. These migrant workers have been termed ‘footloose labour’ by Jan Breman, but this does not imply freedom. Breman’s (1985) study shows, to the contrary, that landless workers do not have many rights, for instance, they are usually not paid the minimum wage. It should be noted here that wealthy farmers often prefer to employ migrant workers for harvesting and other such intensive operations, rather than the local working class, because migrants are more easily exploited and can be paid lower wages. This preference has produced a peculiar pattern in some areas where the local landless labourers move out of the home villages in search of work during the peak agricultural seasons, while migrant workers are brought in from other areas to work on the local farms. This pattern is found especially in sugarcane growing areas. Migration and lack of job security have created very poor working and living conditions for these workers.

Look at this house ‘Sukrutham’ in a village in Kerala. It is located in Yakkar Village, 3 kilometres from Palakkad district town.
The large-scale circulation of labour has had several significant effects on rural society, in both the receiving and the supplying regions. For instance, in poor areas where male family members spend much of the year working outside of their villages, cultivation has become primarily a female task. Women are also emerging as the main source of agricultural labour, leading to the ‘feminisation of agricultural labour force.’ The insecurity of women is greater because they earn lower wages than men for similar work. Until recently, women were hardly visible in official statistics as earners and workers. While women toil on the land as landless labourers and as cultivators, the prevailing patrilineal kinship system, and other cultural practices that privilege male rights, largely exclude women from land ownership.

4.6 Globalisation, Liberalisation, and Rural Society

The policy of liberalisation that India has been following since the late 1980s have had a very significant impact on agriculture and rural society. The policy entails participation in the World Trade Organisation (WTO), which aims to bring about a more free international trading system and requires the opening up of Indian markets to imports. After decades of state support and protected markets, Indian farmers have been exposed to competition from the global market. For instance, we have all seen imported fruits and other food items on the shelves of our local stores – items that were not available a few years ago because of import barriers. Recently, India has also decided to import wheat, a controversial decision that reverses the earlier policy of self-reliance in foodgrains. And bring back bitter memories of dependence on American foodgrains in the early years after Independence.

These are indicators of the process of globalisation of agriculture, or the incorporation of agriculture into the larger global market – a process that has had direct effects on farmers and rural society. For instance, in some regions such as Punjab and Karnataka, farmers enter into contracts with multinational companies (such as PepsiCo) to grow certain crops (such as sugarcane)
as tomatoes and potatoes), which the companies then buy from them for processing or export. In such ‘contract farming’ systems, the company identifies the crop to be grown, provides the seeds and other inputs, as well as the know-how and often also the working capital. In return, the farmer is assured of a market because the company guarantees that it will purchase the produce at a predetermined fixed price. Contract farming is very common now in the production of specialised items such as cut flowers, fruits such as grapes, figs and pomegranates, cotton, and oilseeds. While contract farming appears to provide financial security to farmers, it can also lead to greater insecurity as farmers become dependent on these companies for their livelihoods. Contract farming of export-oriented products such as flowers and gherkins also means that agricultural land is diverted away from food grain production. Contract farming has sociological significance in that it disengages many people from the production process and makes their own indigenous knowledge of agriculture irrelevant. In addition, contract farming caters primarily to the production of elite items, and because it usually requires high doses of fertilisers and pesticides, it is often not ecologically sustainable.

Another, and more widespread aspect of the globalisation of agriculture is the entry of multinationals into this sector as sellers of agricultural inputs such as seeds, pesticides, and fertilisers. Over the last decade or so, the government has scaled down its agricultural development programmes, and ‘agricultural extension’ agents have been replaced in the villages by agents of seed, fertiliser, and pesticide companies. These agents are often the sole source of information for farmers about new seeds or cultivation practices, and of course they have an interest in selling their products. This has led to the increased dependence of farmers on expensive fertilisers and pesticides, which has reduced their profits, put many farmers into debt, and also created an ecological crisis in rural areas.

While farmers in India for centuries have periodically faced distress due to drought, crop failures, or debt, the phenomenon of farmers’ suicides appears to be new. Sociologists have attempted to explain this phenomenon by looking at the structural and social changes that have been occurring in agriculture and agrarian society. Such suicides have become ‘matrix events’, that is, a range of
Factors coalesce to form an event. Many farmers who have committed suicide were marginal farmers, who were attempting to increase their productivity, primarily by practising Green Revolution methods. However, undertaking such production meant facing several risks: the cost of production has increased tremendously due to a decrease in agricultural subsidies, the markets are not stable, and many farmers borrow heavily in order to invest in expensive inputs and improve their production. The loss of either the crop (due to spread of disease or pests, excessive rainfall, or drought), and in some cases, lack of an adequate support or market price means that farmers are unable to bear the debt burden or sustain their families. Such distress is compounded by the changing culture in rural areas, in which increased incomes are required for marriages, dowries and to sustain new activities and expenses, such as education and medical care (Vasavi 1999a).

### Box 4.3

**Farmers' suicides**

The spate of farmers’ suicides that has been occurring in different parts of the country since 1997–98 can be linked to the ‘agrarian distress’ caused by structural changes in agriculture and changes in economic and agricultural policies. These include: the changed pattern of landholdings; changing cropping patterns, especially due to shift to cash crops; liberalisation policies that have exposed Indian agriculture to the forces of globalisation; heavy dependence on high-cost inputs; withdrawal of the State from agricultural extension activities to be replaced by multinational seed and fertiliser companies; decline in state support for agriculture; and individualisation of agricultural operations. According to official statistics, there have been 8,900 suicides by farmers between 2001 and 2006 in Andhra Pradesh, Karnataka, Kerala and Maharashtra (Suri 2006:1523).

### Activity 4.4

Read the newspaper carefully. Listen to the television or radio news. How often are rural areas covered? What kind of issues are usually reported?

The pattern of farmers’ suicides point to the significant crises that the rural areas are experiencing. Agriculture for many is becoming untenable, and state support for agriculture has declined substantially. In addition, agricultural issues are no longer key public issues, and lack of mobilisation means that agriculturists are unable to form powerful pressure groups that can influence policy making in their favour. Suicides of farmers is basically associated with debt, as well as, natural disasters, resulting in the failure of agricultural produce. *Pradhan Mantri Fasal Bima Yojana, Gram Uday se Bharat Uday Abhiyan and National Rurban Mission* are some of the schemes of the Government of India, which may provide unified help to farmers all over the country. These schemes are also helpful in providing quality life to rural India.
Change and Development in Rural Society

1. Read the passage given and answer the questions:

   The harsh working conditions suffered by labourers in Aghanbigha were an outcome of the combined effect of the economic power of the maliks as a class and their overwhelming power as members of a dominant caste. A significant aspect of the social power of the maliks was their ability to secure the intervention of various arms of the state to advance their interests. Thus, political factors decisively contributed to widening the gulf between the dominant class and the underclass.

   i. Why do you think the maliks were able to use the power of the state to advance their own interests?

   ii. Why did labourers have harsh working conditions?

2. What measures do you think the government has taken, or should take, to protect the rights of landless agricultural labourers and migrant workers?

3. There are direct linkages between the situation of agricultural workers and their lack of upward socio-economic mobility. Name some of them.

4. What are the different factors that have enabled certain groups to transform themselves into new wealthy, entrepreneurial, dominant classes? Can you think of an example of this transformation in your state?

5. Hindi and regional language films were often set in rural areas. Think of a film set in rural India and describe the agrarian society and culture that is shown in it. How realistic do you think the portrayal is? Have you seen any recent film set in rural areas? If not how would you explain it?

6. Visit a construction site in your neighbourhood, a brickyard, or other such place where you are likely to find migrant workers. Find out where the workers come from. How are they recruited from their home villages, who is the ‘mukadam’? If they are from rural areas, find out about their lives in their villages and why they have to migrate to find work.

7. Visit your local fruit-seller, and ask her/him about the fruits she/he sells, where they come from, and their prices. Find out what has happened to the prices of local products after fruits began to be imported from outside of India (such as apples from Australia). Are there any imported fruits that are cheaper than Indian fruits.

8. Collect information and write a report on the environmental situation in rural India. Examples of topics: pesticides; declining water table; impact of prawn farming in coastal areas; salination of soil and waterlogging in canal irrigated areas; loss of biodiversity. Possible source: State of India’s Environment Reports: Reports from Centre for Science and Development Down to Earth.

5 Change and Development in Industrial Society
Which was the last film you saw? We are sure you can tell us the name of the hero and heroine but can you remember the name of the sound and light technicians, the make up artists or the dance choreographers? Some people like the carpenters who make the sets are not even mentioned in the credits. Yet, without all these people, the film could not be made. Bollywood may be a place of dreams for you and me, but for many, it is their place of work. Like any industry, the workers there are part of unions. For instance, the dancers, stunt artists and the extras are all part of a junior artists association, whose demands include 8 hours shifts, proper wages and safe working conditions. The products of this industry are advertised and marketed through film distributors and cinema hall owners or through shops in the form of music cassettes and videos. And the people who work in this industry, as in any other, live in the same city, but depending on who they are and how much they earn, they do very different things in that city. Film stars and textile mill owners live in places like Juhu, while extras and textile workers may live in places like Girangaon. Some go to five star hotels and eat Japanese sushi and some eat vada pav from the local handcart. The residents of Mumbai are divided by where they live, what they eat and how much their clothes cost. But they are also united by certain common things that a city provides – they watch the same films and cricket matches, they suffer from the same air pollution and they all have aspirations for their children to do well.

How and where people work and what kind of jobs they have is an important part of who they are. In this chapter, we will see how changes in technology or the kind of work that is available has changed social relations in India. On the other hand, social institutions like caste, kinship networks, gender and region also influence the way that work is organised or the way in which products are marketed. This is a major area of research for sociologists.

For instance, why do we find more women in certain jobs like nursing or teaching than in other sectors like engineering? Is this just a coincidence or is it because society thinks that women are suited for caring and nurturing work as against jobs which are seen as ‘tough’ and masculine? Yet nursing is physically much harder work than designing a bridge. If more women move into engineering, how will that affect the profession? Ask yourself why some coffee advertisements in India display two cups on the package whereas in America they show one cup? The answer is that for many Indians drinking coffee is not an individual wake up activity, but an occasion to socialise with others. Sociologists are interested in the questions of who produces what, who works where, who sells to whom and how. These are not individual choices, but outcomes of social patterns. In turn, the choices that people make influences how society works.

5.1 Images of Industrial Society

Many of the great works of sociology were written at a time when industrialisation was new and machinery was assuming great importance. Thinkers like Karl
Marx, Max Weber and Emile Durkheim associated a number of social features with industry, such as urbanisation, the loss of face-to-face relationships that were found in rural areas where people worked on their own farms or for a landlord they knew, and their substitution by anonymous professional relationships in modern factories and workplaces. Industrialisation involves a detailed division of labour. People often do not see the end result of their work because they are producing only one small part of a product. The work is often repetitive and exhausting. Yet, even this is better than having no work at all, i.e., being unemployed. Marx called this situation alienation, when people do not enjoy work, and see it as something they have to do only in order to survive, and even that survival depends on whether the technology has room for any human labour.

Industrialisation leads to greater equality, at least in some spheres. For example, caste distinctions do not matter any more on trains, buses or in cyber cafes. On the other hand, older forms of discrimination may persist even in new factory or workplace settings. And even as social inequalities are reducing, economic or income inequality is growing in the world. Often social inequality and income inequality overlap, for example, in the domination of upper caste men in well-paying professions like medicine, law or journalism. Women often get paid less than men for similar work.

While the early sociologists saw industrialisation as both positive and negative, by the mid 20th century, under the influence of modernisation theory, industrialisation came to be seen as inevitable and positive. Modernisation theory argues that societies are at different stages on the road to modernisation, but they are all heading in the same direction. Modern society, for these theorists, is represented by the West.

5.2 INDUSTRIALISATION IN INDIA

The Specificity of Indian Industrialisation

The experience of industrialisation in India is in many ways similar to the western model and in many ways different. Comparative analysis of different countries suggests that there is no standard model of industrial capitalism. Let us start with one point of difference, relating to what kind of work people are doing. In developed countries, the majority of people are in the services sector, followed by industry and less than 10% are in agriculture (ILO figures). In India, in
1999-2000, nearly 60% were employed in the primary sector (agriculture and mining), 17% in the secondary sector (manufacturing, construction and utilities), and 23% in the tertiary sector (trade, transport, financial services etc.) However, if we look at the contribution of these sectors to economic growth, the share of agriculture has declined sharply, and services contribute approximately more than half. This is a very serious situation because it means that the sector where the maximum people are employed is not able to generate much income for them. (Government of India, Economic Survey 2001-2002). In India, in 2006-07 the share of employment in agriculture was 15.19%, in mining and quarrying 0.61%, in production 13.33%, in manufacturing it was 6.10%, in trade, hotel and restaurant it was 13.18%, in transport, storage, communication it was 5.06%, in community, social and personal services it was 8.97%, in financial insurance, real estate, business services it was 2.22% and electricity and water it was 0.33% (Source- Planning Commission 11th Five Year Plan, 2007-12, Vol. I, Page 66).

Another major difference between developing and developed countries is the number of people in regular salaried employment. In developed countries, the majority are formally employed. In India, over 50% of the population is self-employed, only about 14% are in regular salaried employment, while approximately 30% are in casual labour (Anant 2005: 239). The adjacent chart shows the changes between 1977-78 and 1999-2000.

Economists and others often make a distinction between the organised or formal and unorganised or informal sector. There is a debate over how to define these sectors. According to one definition, the organised sector consists of all units employing ten or more people throughout the year. These have to be registered with the government to ensure that their employees get proper salaries or wages, pension and other benefits. In India, over 90% of the work, whether it is in agriculture, industry or services is in the unorganised or informal sector. What are the social implications of this small size of the organised sector?

First, it means that very few people have the experience of employment in large firms where they get to meet people from other regions and backgrounds. Urban settings do provide some corrective to this – your neighbours in a city may be from a different place – but by and large, work for most Indians is still in smallscale workplaces. Here personal relationships determine many aspects of work. If the employer likes you, you may get a salary raise, and if you have a fight with him or her, you may lose your job. This is different from a large
organisation with well-defined rules, where recruitment is more transparent and there are mechanisms for complaints and redressal if you disagree with your immediate superior. Second, very few Indians have access to secure jobs with benefits. Of those who do, two-thirds work for the government. This is why government jobs are so popular. The rest are forced to depend on their children in their old age. Government employment in India has played a major role in overcoming boundaries of caste, religion and region. One sociologist has argued that the reason why there have never been communal riots in a place like Bhilai is because the public sector Bhilai Steel Plant employs people from all over India who work together. Others may question this. Third, since very few people are members of unions, a feature of the organised sector, they do not have the experience of collectively fighting for proper wages and safe working conditions. The government has laws to monitor conditions in the unorganised sector, but in practice they are left to the whims and fancies of the employer or contractor.

**Industrialisation in the Early Years of Indian Independence**

The first modern industries in India were cotton, jute, coal mines and railways. After independence, the government took over the ‘commanding heights of the economy.’ This involved defence, transport and communication, power, mining and other projects which only government had the power to do, and which was also necessary for private industry to flourish. In India’s mixed economy policy, some sectors were reserved for government, while others were open to the private sector. But within that, the government tried to ensure, through its licensing policy, that industries were spread over different regions. Before independence, industries were located mainly in the port cities like Madras, Bombay, Calcutta (now, Chennai, Mumbai and Kolkata, respectively). But since then, we see that places like Baroda, Coimbatore, Bengaluru, Pune, Faridabad and Rajkot have become important industrial centres. The government also tried to encourage the small-scale sector through special incentives and assistance. Many items like paper and wood products, stationery, glass and ceramics were reserved for the small-scale sector. In 1991, large-scale industry employed only 28 per cent of the total workforce engaged in manufacture, while the small-scale and traditional industry employed 72 per cent (Roy 2001:11).

**Globalisation, Liberalisation and Changes in Indian Industry**

Since the 1990s, however, the government has followed a policy of liberalisation. Private companies, especially foreign firms, are encouraged to invest in sectors earlier reserved for the government, including telecom, civil aviation, power etc. Licenses are no longer required to open industries. Foreign products are now easily available in Indian shops. As a result of liberalisation, many Indian companies have been bought over by multinationals. At the same time some Indian companies are becoming multinational companies. An instance of the first is when, Parle drinks was bought by Coca Cola. Parle’s annual turnover was Rs. 250 crores, while Coca Cola’s advertising budget alone was Rs. 400 crores. This level of advertising
has naturally increased the consumption of coke across India replacing many traditional drinks. The next major area of liberalisation may be in retail. Do you think that Indians will prefer to shop in departmental stores, or will they go out of business?

**Retail chains scramble to enter Indian market**

Clamoring to enter India’s red-hot retail sector, the world’s largest chains, including Wal-Mart Stores, Carrefour and Tesco, are seeking the best way to enter the country, despite a government ban on foreign direct investment in the market. Recent large investments by major Indian businesses, like Reliance Industries and Bharti Airtel, have increased the sense of urgency for foreign retailers. Last week, Bharti Airtel indicated that it was in talks with Wal-Mart, Carrefour and Tesco to set up a retailing joint venture. India’s retail sector is attractive not only because of its fast growth, but because family-run street corner stores have 97% of the nation’s business. But this industry trait is precisely why the government makes it hard for foreigners to enter the market. Politicians frequently argue that global retailers would destroy thousands of small local players and fledgling domestic chains.

*Source: International Herald Tribune, 3 August 2006*

The government is trying to sell its share in several public sector companies, a process which is known as disinvestment. Many government workers are scared that after disinvestment, they will lose their jobs. In Modern Foods, which was set up by the government to make healthy bread available at cheap prices, and which was the first company to be privatised, 60% of the workers were forced to retire in the first five years.

Let us see how this fits in with worldwide trends. More and more companies are reducing the number of permanent employees and outsourcing their work to smaller companies or even to homes. For multinational companies, this outsourcing is done across the globe, with developing countries like India providing cheap labour. Because small companies have to compete for orders from the big companies, they keep wages low, and working conditions are often poor. It is more difficult for trade unions to organise in smaller firms. Almost all companies, even government ones, now practice some form of outsourcing and contracting. But the trend is especially visible in the private sector.

To summarise, India is still largely an agricultural country. The service sector – shops, banks, the IT industry, hotels and other services are employing more people and the urban middle class is growing, along with urban middle class values like those we see in television serials and films. But we also see that very few people in India have access to secure jobs, with even the small number in regular salaried employment becoming more insecure due to the rise in contract labour. So far, employment by the government was a major avenue for increasing the well-being of the population, but now even that is coming down. Some economists debate this, but liberalisation and privatisation worldwide appear to be associated with rising income inequality. You will be reading more about this in the next chapter on globalisation.
At the same time as secure employment in large industry is declining, the government is embarking on a policy of land acquisition for industry. These industries do not necessarily provide employment to the people of the surrounding areas, but they cause major pollution. Many farmers, especially adivasis, who constitute approximately 40% of those displaced, are protesting at the low rates of compensation and the fact that they will be forced to become casual labour living and working on the footpaths of India’s big cities. You will recall the discussion on competing interests in chapter 3.

In the following sections, we will look at how people find work, what they actually do in their workplaces and what kind of working conditions they face.

### 5.3 How People Find Jobs

If you open the *Times of India* on a Wednesday morning, you will find a section called *Times Ascent*. Here, jobs are advertised, and tips are given about how to motivate yourself or your workers to perform better.

Box 5.2 on the next page shows an example of a public sector job. The person will get benefits like house rent allowance (HRA). The qualifications required for the job are specified in great detail. In such jobs there are clear avenues for promotions, and you can expect that seniority will matter.

Let us look at a private sector job in Box 5.3 on the next page. This is also regular salaried employment and the employer is a well-known hotel. But here the salary and qualifications required are flexible, and the job is likely to be on contract. Look at the language used in this advertisement, such as *loyalty programme*. Each organisation tries to create its own work culture.

But only a small percentage of people get jobs through advertisements or through the employment exchange. People who are self-employed, like plumbers,
Dyal Singh College  
(Delhi University Maintained College)  
Lodi Road, New Delhi 110003

Applications are invited for the post of PRINCIPAL in the scale of pay Rs. 16,400-22400 (with a minimum of Rs. 17,300 p.m.) plus D.A., CCA, H.R.A., T.A. and other benefits as permissible under the rules of the University of Delhi.

QUALIFICATIONS
(i) A Master’s Degree in a relevant subject with at least 55% marks or an equivalent grade of ‘B’ in the seven point scale with letter grade O, A, B, C, D, E & F.
(ii) Ph.D. or equivalent degree
(iii) Total experience of fifteen years of teaching and/or post-doctoral research in Universities/Colleges and other institution of higher education.

Applications stating full details of qualifications, experience, age, etc. with all the supporting documents should reach “The Chairman, Governing Body, Dyal Singh College, Lodi Road, New Delhi – 110 003” in a sealed cover within 15 days from the date of publication of this advertisement.

Chairman
Governing Body

Radisson Hotel Delhi has immediate openings for their loyalty program.

Customer Service Executives  
Senior Tele-sales Executives

Candidates with a good command over English and a flair for sales may apply.
Prior experience preferred.

We offer a 5 star work environment, ongoing development and training, motivating atmosphere, day time jobs and good salary/incentives.
Part time & full time options available.

Please call between 9.30 am to 6.30 pm 30th-31st August & 1st September, 2006
Ph: 66407361/66407351/66407353
Or Fax your CV to 26779062
Or Email: memberhelpdesk@radissondel.com

Job recruitment as a factory worker takes a different pattern. In the past, many workers got their jobs through contractors or jobbers. In the Kanpur textile mills, these jobbers were known as mistri, and were themselves workers. They came from the same regions and communities as the workers, but because they had the owner’s backing they bossed over the workers. On the other hand, the mistri also put community-related pressures on the worker. Nowadays, the importance of the jobber has come down, and both management and unions play a role in recruiting their own people. Many workers also expect that they can pass on their jobs to their children. Many factories employ badli workers who substitute for regular permanent workers who are on leave. Many of these badli workers have
actually worked for many years for the same company but are not given the same status and security. This is what is called contract work in the organised sector. Employment opportunities have two important components:

(i) job in an organisation

(ii) Self-employment

The schemes of the Government of India, like ‘Stand Up India Scheme’ and ‘Make in India’ are programmes by which employment and self-employment will become possible. These schemes are helpful to people of the marginalised sections of the society, like SC, ST and other backward classes. These are positive signs for creating economic potential amongst the demographic dividend of India.

However, the contractor system is most visible in the hiring of casual labour for work at construction sites, brickyards, and so on. The contractor goes to villages and asks if people want work. He will loan them some money. This loan includes the cost of transport to the work site. The loaned money is treated as an advance wage and the worker works without wages until the loan is repaid. In the past, agricultural labourers were tied to their landlord by debt. Now, however, by moving to casual industrial work, while they are still in debt, they are not bound by other social obligations to the contractor. In that sense, they are more free in an industrial society. They can break the contract and find another employer. Sometimes, whole families migrate and the children help their parents.

### Labour groups in the brickyards of South Gujarat

Approximately 30,000–40,000 workers are employed here on a seasonal basis. The brickyards are owned by upper castes, like Parsis or Desais. Members of the potter caste are also acquiring brickyards as an extension of their traditional work with mud. The workers are usually local or migrant dalits. They are employed by contractors and work in a group of nine to eleven members.

While the men knead the mud and mould the brick, the little children carry each brick to the place where they are dried. A group of women and girls then carries the bricks to the kiln, where they are fired by men, and from there again to the trucks where the bricks are loaded. Each group makes 2500–3000 bricks a day. A quick group can finish this number in 10 hours, while a slow group will take 14 hours. From the age of six, children are woken during the night to carry the fresh bricks made by their fathers. While wet, those bricks weigh roughly 3 kg. The little children run with one brick each, away from the base plate and into darkness. When they reach the age of about nine, they are promoted to carrying two bricks. Sometimes, says sociologist Jan Breman, their parents wake them up crying from the rags that form their beds.
5.4 **HOW IS WORK CARRIED OUT?**

In this section, we will explore how work actually takes place. How are all the products we see around us manufactured? What is the relationship between managers and workers in a factory or in an office? In India, there is a whole range of work settings from large companies where work is automated to small home-based production.

The basic task of a manager is to control workers and get more work out of them. There are two main ways of making workers produce more. One is to extend the working hours. The other is to increase the amount that is produced within a given time period. Machinery helps to increase production, but it also creates the danger that eventually machines will replace workers. Both Marx and Mahatma Gandhi saw mechanisation as a danger to employment.

Another way of increasing output is by organising work. An American called Frederick Winslow Taylor invented a new system in the 1890s, which he called 'Scientific Management'. It is also known as Taylorism or industrial engineering. Under his system, all work was broken down into its smallest repetitive elements, and divided between workers. Workers were timed with the help of stopwatches.

---

**ACTIVITY 5.2**

Gandhi on Machinery, in _Hind Swaraj_ 1924:
“What I object to is the craze for machinery, not machinery as such. The craze is for what they call labour-saving machinery. Men go on ‘saving labour’ till thousands are without work and thrown on the open streets to die of starvation. I want to save time and labour, not for a fraction of mankind, but for all. I want the concentration of wealth, not in the hands of the few, but in the hands of all.”

1934: “When as a nation we adopt the spinning-wheel, we not only solve the question of unemployment but we declare that we have no intention of exploiting any nation, and we also end the exploitation of the poor by the rich.”

Give an example of how machinery creates a problem for workers. What alternative did Gandhi have in mind? How does adopting the spinning wheel prevent exploitation?
and had to fulfill a certain target every day. Production was further speeded up by the introduction of the assembly line. Each worker sat along a conveyor belt and assembled only one part of the final product. The speed of work could be set by adjusting the speed of the conveyor belt. In the 1980s, there was an attempt to shift from this system of direct control to indirect control, where workers are supposed to motivate and monitor themselves. But often we find that the old Taylorist processes survive.

Workers in textile mills, which is one of the oldest industries in India, often described themselves as extensions of the machine. Ramcharan, a weaver who had worked in the Kanpur cotton mills since the 1940s, said:

You need energy. The eyes move, the neck, the legs and the hands, each part moves. Weaving is done under a continuous gaze - one cannot go anywhere, the focus must be on the machine. When four machines run all four must move together, they must not stop. (Joshi 2003)

The more mechanised an industry gets, the fewer people are employed, but they too have to work at the pace of the machine. In Maruti Udyog Ltd. two cars roll off the assembly line every minute. Workers get only 45 minutes rest in the entire day - two tea breaks of 7.5 minutes each and one lunch break of half an hour. Most of them are exhausted by the age of 40 and take voluntary retirement. While production has gone up, the number of permanent jobs in the factory has gone down. The firm has outsourced all services like cleaning, and security, as well as the manufacture of parts. The parts suppliers are located around the factory and send the parts every two hours or just-in-time. Outsourcing and just-in-time keeps costs low for the company, but the workers are very tense, because if the supplies fail to arrive, their production targets get delayed, and when they do arrive they have to run to keep up. No wonder they get exhausted.

Now let us look at the services sector. Software professionals are middle class and well educated. Their work is supposed to be self-motivated and creative. But, as we see from the box, their work is also subject to Taylorist labour processes.
As a result of these working hours, in places like Bengaluru, Hyderabad and Gurugram, where many IT firms or call centres are located, shops and restaurants have also changed their opening hours, and are open late. If both husband and wife work, then children have to be put in crèches. The joint family, which was supposed to have disappeared with industrialisation, seems to have re-emerged, as grandparents are roped in to help with children.

One important debate in sociology is whether industrialisation and the shift to services and knowledge-based work, like IT, leads to greater skills in society. We often hear the phrase ‘knowledge economy’ to describe the growth of IT sector in India. But how do you compare the skills of a farmer who knows how to grow many hundreds of crops relying on his or her understanding of the weather, the soil and the seeds, with the knowledge of a software professional? Both are skilled but in different ways. The famous sociologist, Harry Braverman, argues that the use of machinery actually deskills workers. For example, whereas earlier architects and engineers had to be skilled draughtsmen, now the computer does a lot of the work for them.

For example, whereas earlier architects and engineers had to be skilled draughtsmen, now the computer does a lot of the work for them.

### 5.5 Working Conditions

We all want power, a solid house, clothes and other goods, but we should remember that these come to us because someone is working to produce them, often in very bad conditions. The government has passed a number of laws to regulate working conditions. Let us look at mining, where a number of people are employed. Coal mines alone employ 5.5 lakh workers. The Mines Act 1952 specifies the maximum number of hours a person can be made to work in a week, the need to pay overtime for any extra hours worked and safety rules. These rules may be followed in big companies, but not in smaller mines and
quarries. Moreover, sub-contracting is widespread. Many contractors do not maintain proper registers of workers, thus avoiding any responsibility for accidents and benefits. After mining has finished in an area, the company is supposed to cover up the open holes and restore the area to its earlier condition. But they don’t do this.

Workers in underground mines face very dangerous conditions, due to flooding, fire, the collapse of roofs and sides, the emission of gases and ventilation failures. Many workers develop breathing problems and diseases like tuberculosis and silicosis. Those working in overground mines have to work in both hot sun and rain, and face injuries due to mine blasting, falling objects etc. The rate of mining accidents in India is very high compared to other countries.

Time running out for 54 trapped miners in Jharkhand
IANS, September 7, 2006

54 miners at the Bhatdih colliery of Nagada were trapped Wednesday night following a blast due to the accumulation of gases. It was about 8 p.m. when the explosion, caused by the pressure due to the accumulation of methane and carbon monoxide, shook the colliery belonging to the Bharat Coking Coal Limited (BCCL). The intensity was so high that a one-tonne trolley in inclination number 17 was thrown out.

Four rescue teams have been constituted. But they don’t have adequate number of oxygen masks to enter the deep mine where the incident occurred.

Most of the trapped miners are between the ages of 20 and 30.

Family members and union leaders have blamed the BCCL management for the incident. “This is one of the BCCL’s poisonous mines. No safety measures have been adopted by the management. Water sprinkling facilities and gas testing machines should be available in the colliery. But no such arrangements have been made here,” said a union member.

In many industries, the workers are migrants. The fish processing plants along the coastline employ mostly single young women from Tamil Nadu, Karnataka and Kerala. Ten-twelve of them are housed in small rooms, and sometimes one shift has to make way for another. Young women are seen as submissive workers. Many men also migrate singly, either unmarried or leaving
their families in the village. In 1992, 85% of the 2 lakh Oriya migrants in Surat were single. These migrants have little time to socialise and whatever little time and money they can spend is with other migrant workers. From a nation of interfering joint families, the nature of work in a globalised economy is taking people in the direction of loneliness and vulnerability. Yet for many young women, it also represents some independence and economic autonomy.

5.6 **Home-based Work**

Home-based work is an important part of the economy. This includes the manufacture of lace, zari or brocade, carpets, bidis, agarbattis and many such products. This work is mainly done by women and children. An agent provides raw materials and also picks up the finished product. Home workers are paid on a piece-rate basis, depending on the number of pieces they make.

Let us look at the bidi industry. The process of making bidis starts in forested villages where villagers pluck *tendu* leaves and sell it to the forest department or a private contractor who in turn sells it to the forest department. On average a person can collect 100 bundles (of 50 leaves each) a day. The government then auctions the leaves to bidi factory owners who give it to the contractors. The contractor in turn supplies tobacco and leaves to home-based workers. These workers, mostly women, roll the bidis – first dampening the leaves, then cutting them, filling in tobacco evenly and then tying them with thread. The contractor picks up these bidis and sells them to the manufacturer who roasts them, and puts on his own brand label. The manufacturer then sells them to a distributor who distributes the packed bidis to wholesalers who in turn sell to your neighbourhood pan shops.

**Activity 5.3**

Find out how tobacco is grown, cured and how it reaches the bidi worker.
Let us see from the following pie diagram how the value of the finished bidi is distributed. The manufacturer gets the maximum amount because of the image of the brand, showing the power of images.

**Life history of a bidi worker**

Madhu is a 15-year old school dropout. She stopped going to school after failing in Class VIII. Her father, a tailor, expired last year. He was suffering from tuberculosis. This made it necessary for the children and their mother to work. Her elder brother aged 17 years works in a grocery shop and the younger one aged 14 years is engaged in chocolate packaging. Madhu and her mother roll bidis. Madhu started rolling bidis at an early age and she enjoys it as it provides her the opportunity to sit close to her mother and other women and listen to them chat. She fills tobacco into the rolled tendu leaves. She spends most of her time in this activity apart from the time spent doing household chores. Due to long hours of sitting in the same posture daily, she suffers from backache. Madhu wants to restart her schooling. *(Bhandari 2005: 406)*

**5.7 STRIKES AND UNIONS**

Many workers are part of trade unions. Trade unions in India have to overcome a number of problems, such as regionalism and casteism. Datta Iswalkar, a mill worker, described how caste had been overcome but not entirely in the Mumbai mills:

*They would sit and chew paan with him (Vishnu, a Mahar worker in Modern Mills) but they would not drink water from his hands! They never treated him badly, they were friends with him, but they would never go to his house. Or eat out of a lunchbox bought by any of the Mahars. The funny thing is the Marathi workers were unable to judge the caste of the North Indian workers. So they could not practice untouchability with them!*

*(Menon and Aadarkar, 2004: 113)*

In response to harsh working conditions, sometimes workers went on strike. In a strike, workers do not go to work. In a lockout the management shuts the gate and prevents workers from coming. To call a strike is a difficult decision as managers may try to use substitute labour. Workers also find it hard to sustain themselves without wages.
Let us look at one famous strike, the Bombay Textile strike of 1982, which was led by the trade union leader, Dr. Datta Samant, and affected nearly a quarter of a million workers and their families. The strike lasted nearly two years. The workers wanted better wages and also wanted the right to form their own union. According to the Bombay Industrial Relations Act (BIRA), a union had to be ‘approved’ and the only way it could be ‘approved’ was if it gave up the idea of strikes. The Congress-led Rashtriya Mill Mazdoor Sangh (RMMS) was the only approved union and it helped to break the strike by bringing in other workers. The government also refused to listen to the workers’ demands. Slowly after two years, people started going back to work because they were desperate. Nearly one lakh workers lost their jobs and went back to their villages, or took up casual labour, others moved to smaller towns, like Bhiwandi, Malegaon and Ichalkaranji, to work in the powerloom sector. Mill owners did not invest in machinery and modernisation. Today, they are trying to sell off the mill land to real estate dealers to build luxury apartments, leading to a battle over who will define the future of Mumbai – the workers who built it or the mill owners and real estate agents.

Jayprakash Bhilare, ex-millworker, General Secretary of the Maharashtra Girni Kamgar Union: Textile workers were getting only their basic wage and DA, and no other allowance. We were getting only five days Casual Leave. Other workers in other industries had started getting allowances for travelling, health benefits, etc., and 10-12 days’ Casual Leave. This agitated the textile workers...On 22 October 1981, the workers of Standard Mills marched to the house of Dr. Datta Samant to ask him to lead them. At first Samant declined, saying the industry was covered by the BIRA and he did not know enough of the textile industry. These workers were in no mood to take no for an answer. They kept a night-long vigil outside his home and in the morning Samant finally relented.

Lakshmi Bhatkar, participant in the strike: I supported the strike. We would sit outside the gate every day and discuss what was to be done. We would go for the morcha that was organised from time to time...the morcha always used to be huge – we never looted or hurt anybody. I was asked to speak sometimes but I was not able to make speeches. My legs would shake too much! Besides I was afraid of my children – what would they say? They would think here we are starving at home and she has her face printed in the newspapers...There was a morcha to Century Mills showroom once. We were arrested and taken to Borivali. I was thinking about my children. I could not eat. I thought to myself that we are not criminals, we were mill workers, fighting for the wages of our blood.

Kisan Salunke, ex-millworker, Spring Mills: Century Mills was opened by the RMMS barely a month-and-half after the strike began. They could do this because they had the full backing of the state and the government. They brought outsiders into the mill and they kept them inside without letting them out at all... Anantrao Bhonsle (Chief Minister of Maharashtra then) offered a 30-rupee raise. Datta Samant called a meeting to discuss this. All the leading activists were there. We said, ‘No, we don’t want this. If there is no dignity, if there is no discussion with the strike leaders, we will not be able to go back to work without any harassment.”

Datta Iswalkar, President of the Mill Chawls Tenant Association: The Congress brought all the goondas out of jail to break the strike like Babu Reshim, Rama Naik and Arun Gawli. They started to threaten the workers. We had no alternative but to beat up strikebreakers. It was a matter of life and death for us.
**Change and Development in Industrial Society**

*Bhai Bhonsle, General Secretary of the RMMS during 1982 strike*: We started getting people to work in the mills after three months of the strike…Our point was, if people want to go to work let them, in fact they should be helped. …About the mafia gangs being involved, I was responsible for that…These Datta Samant people would wait at convenient locations and lie in wait for those going to work. We set up counter groups in Parel and other places. Naturally there were some clashes, some bloodshed…When Rama Naik died, Bhujbal who was Mayor then, had come in his official car to pay his respects. These forces were used at one time or other by many people in politics.

*Kisan Salunke, ex-millworker*: Those were very difficult times. We had to sell all our vessels. We were ashamed to go to the market with our vessels so we would wrap them in gunny bags and take them to the shop to sell ..There were days when I had nothing to eat, only water. We bought sawdust and burnt it for fuel. I have three sons. Sometimes when the children had no milk to drink, I could not bear to see them hungry. I would take my umbrella and go out of the house.

*Sindu Marhane, ex-millworker*: The RMMS and goondas came for me too, to force me back to work. But I refused to go….There were rumours going round as to what happened to women who went to stay and work in the mills. There were incidents of rape.

**Exercise for Box 5.8**

After reading these accounts of the 1982 strike answer the questions given below.

1. Describe the 1982 textile strike from the different perspectives of those involved.
2. Why did the workers go on strike?
3. How did Datta Samant take up the leadership of the strike?
4. What was the role played by strike-breakers?
5. How did the mafia get a foothold in these areas?
6. How were women affected and what were their concerns during the strike?
7. How did workers and their families survive the period of strike?

1. Choose any occupation you see around you – and describe it along the following lines: a) social composition of the work force – caste, gender, age, region; b) labour process – how the work takes place, c) wages and other benefits, d) working conditions – safety, rest times, working hours etc.

   or

2. In the account of brickmaking, bidi rolling, software engineers or mines that are described in the boxes, describe the social composition of the workers. What are the working conditions and facilities available? How do girls like Madhu feel about their work?

3. How has liberalisation affected employment patterns in India?

Prist Pathiyaa

The fall of the language vernacular.
No discussion on social change in the twenty-first century can take place without some reference to globalisation. It is but natural that in this book on social change and development, the terms globalisation and liberalisation have already appeared in your earlier chapters. Recall the section on globalisation, liberalisation, and rural society in chapter 4. Go back and read the section on the Indian government’s policy of liberalisation and its impact on Indian industries in chapter 5. It also came up when we discussed Vision Mumbai and the new visions for global cities in chapter 3. Other than your school books, you must have come across the term globalisation in newspapers, television programmes or even in everyday conversation.

**Activity 6.1**

Read any newspaper regularly for two weeks and note down how the term ‘globalisation’ is used. Compare your notes with others in the class.

Note down references to the term ‘globalisation’ and ‘global’ in different kinds of television programmes. You can focus on news and discussions on political or economic or cultural matters.
Globalisation and Social Change

Activity 1 will help you notice the various ways the term is used. But we still need to be clear about what exactly does the term means. In this chapter we seek to understand the meaning of globalisation, its different dimensions and their social consequences.

However, this does not mean that there can be only one definition of globalisation and only one way of understanding it. Indeed you will find that different subjects or academic disciplines may focus on different aspects of globalisation. Economics may be dealing more with the economic dimensions such as capital flows. Political science may focus on the changing role of governments. However, the very process of globalisation is so far-reaching that disciplines have to increasingly borrow from each other to understand both the causes and consequences of globalisation. Let us see how sociology seeks to understand globalisation.

You will recall our early discussions on the scope of sociology and the distinctive character of the sociological perspective. We go back a bit in order to focus on the significance of the sociological perspective to understand globalisation.

The scope of sociological study is extremely wide. It can focus its analysis of interactions between individuals such as that of a shopkeeper with a customer, between teachers and students, between two friends or family members. It can likewise focus on national issues such as unemployment or caste conflict or the effect of state policies on forest rights of the tribal population or rural indebtedness. Or examine global social processes such as: the impact of new flexible labour regulations on the working class; or that of the electronic media on the young; or the entry of foreign universities on the education system of the country. What defines the discipline of sociology is therefore not just what it studies (i.e. family or trade unions or villages) but how it studies a chosen field. (NCERT BOOK 1, Class XI 2005)

You read the above paragraph carefully. You will realise that since sociology is not defined by what it studies but how it studies, it would be not quite right to state that sociology only studies the social or cultural consequences of globalisation. What it does is use the sociological imagination to make sense of the connections between the individual and society, the micro and the macro, the local and the global. How is the peasant affected in a remote village? How is s/he connected to global changes? How has it affected the chances of employment for the middle class? How has it affected the possibilities of big Indian corporations becoming transnational corporations? What does it mean to the neighbourhood grocer if the retail sector is opened up to big transnational companies? Why are there so many shopping malls in our cities and towns today? How has it changed the way young people spend their leisure time? These are just few examples of the wide ranging and different kinds of changes that globalisation is bringing about. You will find many more instances whereby global developments are affecting the lives of people. And thereby affecting the way sociology has to study society.
With the opening up of the market and removal of restrictions to the import of many products we have many more products from different corners of the world in our neighbourhood shops. Since April 1, 2001, all types of quantitative restrictions (QR) on imports were withdrawn. It is no surprise now to find a Chinese pear, an Australian apple vying for attention in the local fruit stall. The neighbourhood store also has Australian orange juice and ready to fry chips in frozen packets. What we eat and drink at home with our family and friends slowly changes. The same set of policy changes affects consumers and producers differently. What may mean greater choices for the urban, affluent consumer may mean a crisis of livelihood for a farmer. These changes are personal because they affect individuals’ lives and lifestyles. They are obviously also linked to public policies adopted by the government and its agreement with the World Trade Organisation (WTO). Likewise macro policy changes have meant that instead of one television channel we have literally scores today. The dramatic changes in the media are perhaps the most visible effect of globalisation. We will be discussing this in greater detail in the next chapter. These are just few random examples but they may help you to appreciate the close interconnection that exists between your personal lives and the apparently remote policies of globalisation. As mentioned earlier the sociological imagination enables to make this connection between the micro and the macro, between the personal and public.

Sociology has been often defined as the discipline that studies ‘society’. You would remember from your discussions in Book 1, Class XI that the boundaries of ‘society’ are not easy to draw. A study of a village not only meant study of different social groups and their ‘societies’ but would also have to take into account, the ways the village society was linked to the outside world. This linkage is more valid today than ever before. The sociologist or social anthropologist cannot study society as though it was an isolated entity. The compression of space and time has changed this. Sociologists have to study villages, families, movements, child rearing practices, work and leisure, bureaucratic organisations or castes taking this global interconnection into account. Studies will have to take into account the impact of WTO rules on agriculture and therefore on the farmer.

The effect of globalisation is far reaching. It affects us all but affects us differently. Thus, while for some it may mean new opportunities, for others the loss of livelihood. Women silk spinners and twisters of Bihar lost their jobs once the Chinese and Korean silk yarn entered the market. Weavers and consumers prefer this yarn as it is somewhat cheaper and has a shine. Similar displacements have come with the entry of large fishing vessels into Indian waters. These vessels take away the fish that used to be earlier collected by Indian fishing vessels. The livelihood of women fish sorters, dryers, vendors and net makers thereby get affected. In Gujarat, women gum collectors, who were picking from the ‘julifera’ (Baval trees), lost their employment due to the import of cheaper gum from Sudan. In almost all cities of India, the rag pickers lost some of their employment due to import of waste paper from developed countries. We will see later in the chapter how traditional entertainers are affected.
It is obvious that globalisation is of great social significance. But as you saw its impact on different sections of society is very different. There are, therefore, sharply divided views about the impact of globalisation regarding its effect. Some believe that it is necessary to herald a better world. Others fear that the impact of globalisation on different sections of people is vastly different. They argue that while many in the more privileged section may benefit, the condition of a large section of the already excluded population worsens. There are yet others who argue that globalisation is not a new development at all. In the next two sections we look at these issues. We find out a bit more about the kind of global inter-connections that India had in the past. We also examine whether indeed globalisation has some distinctive features and if so what is it.

6.1 Are Global Interconnections New to World and to India

If globalisation is about global interconnections we can ask whether this is really a new phenomenon. Was India or the different parts of the world not interacting with each other in earlier times?

The Early Years

India was not isolated from the world even two thousand years ago. We have read in our history textbooks about the famous Silk route, which centuries ago connected India to the great civilisations, which existed in China, Persia, Egypt and Rome. We also know that throughout India’s long past, people from different parts came here, sometimes as traders, sometimes as conquerors, sometimes as migrants in search of new lands and settled down here. In remote Indian villages often people ‘recall’ a time when their ancestors lived elsewhere, from where they came and settled down where they now live.

It is interesting to note that the greatest grammarian in Sanskrit namely Panini, who systematised and transformed Sanskrit grammar and phonetics around the fourth century BCE, was of Afghan origin. …The seventh-century Chinese scholar Yi Jing learned his Sanskrit in Java (in the city of Shri Vijaya) on his way from China to India. The influence of interactions is well reflected in languages and vocabularies throughout Asia from Thailand to Malaya to Indo-China, Indonesia, the Philippines, Korea and Japan. …

We can find a warning against isolationism in a parable about a well-frog- the ‘kupamanduka’- that persistently recurs in several old Sanskrit texts…The kupamanduka is a frog that lives its whole life within a well, knows nothing else, and is suspicious of everything outside it. It talks to no one, and argues with no one on anything. It merely harbours the deepest suspicion of the outside world. The scientific, cultural and economic history of the world would have been very limited indeed had we lived like well-frogs. (Sen 2005: 84-86)
Global interactions or even a global outlook are thus not novel developments unique to the modern period or unique to modern India.

**COLONIALISM AND THE GLOBAL CONNECTION**

We began our story of social and economic development in modern India from the colonial period. You will recall from chapter 1 that modern capitalism had a global dimension from its very inception. Colonialism was part of the system that required new sources of capital, raw materials, energy, markets and a global network that sustained it. Often globalisation today identifies large-scale movement of people or migration as a defining feature. You know, however, that perhaps the greatest movement of people was the migration of European people who settled down in the Americas and Australia. You will remember how indentured labourers were taken away in ships from India to work in distant parts of Asia, Africa and Americas. And the slave trade that carted thousands of Africans away to distant shores.

**INDEPENDENT INDIA AND THE WORLD**

Independent India retained a global outlook. In many senses this was inherited from the Indian nationalist movement. Commitment to liberation struggles throughout the world, solidarity with people from different parts of the world was very much part of this vision. Many Indians travelled overseas for education and work. Migration was an ongoing process. Export and import of raw material, goods and technology was very much part of development since independence. Foreign firms did operate in India. So we need to ask ourselves whether the current process of change is radically different from anything we have seen in the past.

**6.2 UNDERSTANDING GLOBALISATION**

We have seen that India had significant links with the global world from very early times. We are also aware that western capitalism as it emerged in Europe was both built upon and maintained by global control over resources of other countries as in colonialism. The important question is, however, whether globalisation is just about global interconnections. Or is it about some significant changes in the capitalist system of production and communication, organisation of labour and capital, technological innovations and cultural experiences, ways of governance and social movements? These changes are significant even if some of the patterns were already evident in the early stages of capitalism. Some of the changes such as those flowing from the communication revolution have in a myriad ways transformed the way we work and live.

We seek to spell out some of the distinctive features of globalisation below. As you go through them you will realise why a simple definition of global interconnection does not capture the intensity and complexity of globalisation.
Globalisation refers to the growing interdependence between different people, regions and countries in the world as social and economic relationships come to stretch world-wide. Although economic forces are an integral part of globalisation, it would be wrong to suggest that they alone produce it. It has been driven forward above all by the development of information and communication technologies that have intensified the speed and scope of interaction between people all over the world. Moreover, as we shall see, there was a political context within which it grew. Let us look at the different dimensions of globalisation. To facilitate our discussion we deal with the economic, political and cultural aspects separately. However, you will soon realise how closely connected and interconnected they are.

**The Different Dimensions of Globalisation**

**The Economic**

In India we often use the terms liberalisation and globalisation. They are indeed related but are not the same. In India we have seen how the state decided to bring some changes in its economic policy in 1991. These changes are termed as liberalisation policies.

*a. The Economic Policy of Liberalisation*

Globalisation involves a stretching of social and economic relationships throughout the world. This stretching is pushed by certain economic policies. Very broadly this process in India is termed liberalisation. The term liberalisation refers to a range of policy decisions that the Indian state took since 1991 to open up the Indian economy to the world market. This marked a break with an earlier stated policy of the government to have a greater control over the economy. The state after independence had put in place a large number of laws that ensured that the Indian market and Indian indigenous business were protected from competition of the wider world. The underlying assumption of such a policy was that an erstwhile colonial country would be at a disadvantage in a free market situation. You have already read about the economic impact of colonialism in chapter 1. The state also believed that the market alone would not be able to look after all the welfare of the people, particularly its disadvantaged sections. It felt that the state had an important role to play for the welfare of the people. You will recall from chapter 3 how important the issues of social justice were for the makers of the Indian Constitution.

Liberalisation of the economy meant the steady removal of the rules that regulated Indian trade and finance regulations. These measures are also described as economic reforms. What are these reforms? Since July 1991, the Indian economy has witnessed a series of reforms in all major sectors of the economy (agriculture, industry, trade, foreign investment and technology, public sector, financial institutions etc). The basic assumption was that greater integration into the global market would be beneficial to Indian economy.
The process of liberalisation also involved the taking of loans from international institutions such as the International Monetary Fund (IMF). These loans are given on certain conditions. The government makes commitments to pursue certain kind of economic measures that involve a policy of structural adjustments. These adjustments usually mean cuts in state expenditure on the social sector such as health, education and social security. There is also a greater say by international institutions such as the World Trade Organisation (WTO).

b. The transnational corporations

Among the many economic factors driving globalisation, the role of transnational corporations (TNCs) is particularly important. TNCs are companies that produce goods or market services in more than one country. These may be relatively small firms with one or two factories outside the country in which they are based. They could also be gigantic international ones whose operations criss-cross the globe. Some of the biggest TNCs are companies known all around the world: Coca Cola, General Motors, Colgate-Palmolive, Kodak, Mitsubishi and many others. They are oriented to the global markets and global profits even if they have a clear national base. Some Indian corporations are also becoming transnational. We are, however, not sure at this point of time, what this trend may mean to the people of India as a whole.
c. The electronic economy

The ‘electronic economy’ is another factor that underpins economic globalisation. Banks, corporations, fund managers and individual investors are able to shift funds internationally with the click of a mouse. This new ability to move ‘electronic money’ instantaneously carries it with great risks however. In India often this is discussed with reference to rising stock markets and also sudden dips because of foreign investors buying stocks, making a profit and then selling them off. Such transactions can happen only because of the communication revolution, which we discuss later.

| Activity 6.2 |
| Make a list of products that you either use or have seen in the market or seen advertised which are produced by transnational corporations. You can make a list of products such as: |
| ◀️ Shoes |
| ◀️ Cameras |
| ◀️ Computers |
| ◀️ Televisions |
| ◀️ Cars |
| ◀️ Music Systems |
| ◀️ Cosmetics like soaps or shampoos |
| ◀️ Clothes |
| ◀️ Processed Food |
| ◀️ Tea |
| ◀️ Coffee |
| ◀️ Milk Powder |

d. The Weightless Economy or Knowledge Economy

In contrast to previous eras, the global economy is no longer primarily agricultural or industrial in its basis. The weightless economy is one in which products have their base in information, as in the case with computer software, media and entertainment products and internet-based services. A knowledge economy is one in which much of the workforce is involved not in the physical production or distribution of material goods, but in their design, development, technology, marketing, sale and servicing. It can range from the neighbourhood catering service to large organisations involved in providing a host of services for both professional meets like conferences to family events like weddings. We have a host of new occupations that was unheard of a few decades ago, for instance event managers. Have you heard of them? What do they do? Find out about other such new service.
Most of us make our money from thin air: we produce nothing that can be weighed, touched or easily measured. Our output is not stockpiled at harbours, stored in warehouses or shipped in railway cars. Most of us earn our livings providing service, judgement, information and analysis, whether in a telephone call centre, a lawyer’s office, a government department or a scientific laboratory. We are all in the thin-air business.

Source: Charles Leadbeater 1999 Living on Thin Air: The New Economy (London: Viking)

**Box 6.2**

**Exercise for Box 6.2**

1. Find out from your immediate neighbourhood the kind of jobs young adults do. List them. How many do you think is engaged in some form of service providing? Discuss.
2. Find out from your class the kind of future plans that your classmates have. Discuss with reference to the idea of a weightless economy.

**Activity 6.3**

- Count the number of channels on television that are business channels and provide updates on stock markets, flows of foreign direct investments, financial reports of various companies etc. You can choose whether you wish to focus on an Indian language channel or English channels.
- Find out the names of some financial newspapers.
- Do you see any focus on global trends? Discuss.
- How do you think these trends have affected our lives.

**Global Communications**

Important advances in technology and the world’s telecommunications infrastructure has led to revolutionary changes in global communication. Some homes and many offices now have multiple links to the outside world, including telephones (land lines and mobiles), fax machines, digital and cable television, electronic mail and the internet.

Some of you may find many such places. Some of you may not. This is indicative of what is often termed as the digital divide in our country. Despite this digital divide these forms of technology do facilitate the ‘compression’ of time and space. Two individuals located on opposite sides of the planet – in
Flying high

With more airlines flying the skies and air travel becoming affordable, it is time to look at infrastructure development and the availability of facilities at Indian airports.

Dizzying Heights

Direct international flights to more non-metropoles

As many as 15 towns in small-town India gearing itself to be tourist attractions. Jaipur, Lucknow, and...
Bengaluru and New York – not only can talk, but also send documents and images to one another with the help of satellite technology. The process of globalisation is giving rise to network and media society. To create global interconnectedness more efficiently, the Government of India has initiated an ambitious programme in the form of ‘Digital India’, in which every exchange will incorporate digitisation. It will transform India into a ‘digitally empowered society’.

Globally, the use of the Internet increased phenomenally in the 1990s. In 1998, there were 70 million Internet users worldwide. Of these, the USA and Canada accounted for 62%, while Asia had 12%. By 2000, the number of Internet users had risen to 325 million. India had 3 million Internet subscribers and 15 million users by 2000, thanks to the proliferation of cyber cafés all over the country. (Singhal and Rogers 2001: 235)

According to a CNN-IBN poll broadcast on August 15, 2006, about 7% of the country’s youth had access to the Internet, while only 3% had computers to home. The figures themselves indicate the digital divide that continues to prevail in the country in spite of the rapid spread of computers. Cyber connectivity had largely remained an urban phenomenon but widely accessible through the cyber cafés. But the rural areas with their erratic power supply, widespread illiteracy and lack of infrastructure, like telephone connections, still remain largely unconnected.

India’s Telecommunications Expansion
When India gained Independence in 1947, the new nation had 84,000 telephone lines for its population of 350 million. Thirty-three years later, by 1980, India’s telephone service was still bad with only 2.5 million telephones and 12,000 public phones for a population of 700 million; only 3 per cent of India’s 600,000 villages had telephones. However, in the late 1990s, a sea change occurred in the telecommunication scenario: by 1999, India had installed a network of over 25 million telephone lines, spread across 300 cities, 4,869 towns, and 310,897 villages, making India’s telecommunication network the ninth largest in the world. …Between 1988 and 1998, the number of villages with some kind of telephone facility increased from 27,316 to 300,000 (half of all villages in India). By 2000, some 650,000 public call offices (PCOs) provided reliable telephone service, where people can simply walk in, make a call, and pay the metered
Globalisation and Social Change

charges, had mushroomed all over India, including remote, rural, hilly, and tribal areas. The emergence of PCOs satisfies the strong Indian sociocultural need of keeping in touch with family members. Much like train travel in India, which is often undertaken to celebrate marriages, visit relatives, or attend funerals, the telephone is also viewed as a way of maintaining close family ties. Not surprisingly, most advertisement for telephony service show mothers talking to their sons and daughters, or grandparents talking to their grandchildren. Telephone expansion in India, thus, serves a strong sociocultural function for its users, in addition to a commercial one. (Singhal and Rogers 2001: 188-89)

**Exercise for Box 6.2**

Write an essay on personal relationships and telecommunications.

and a ‘knowledge economy’. You have already seen how outsourcing operates in your earlier chapters.

Cellular telephony has also grown enormously and cell phones are a part of the self for most urban-based middle class youth. There has been a tremendous growth in the usage of cell phones and a marked change in how its use is seen. The following three boxes mark that shift.

In 1988, the Indian Home Ministry banned the open sale of pre-paid cash cards for mobile telephones, arguing that a number of criminals were using these pre-paid cash cards so as to leave investigators with no way of tracing them. While the use of telephone cards by criminals is a miniscule part of overall numbers, telephone operators have been mandated to verify the name and address of a customer before retailing a cash card. Private operators believe that they are losing almost 50 per cent of their business because of this needless verification.

...New subscription to mobile telephony services dropped by about 50 per cent in 1998 when the Indian Income Tax Department decreed that anyone owning a mobile telephone must submit their income tax. This decree was premised on the notion that if an individual could afford a “luxury” item, such as a mobile telephone, the individual earned enough to file a tax return. (Singhal and Rogers: 2001: 203-04)

India has become one of the fastest growing mobile markets in the world. The mobile services were commercially launched in August 1995 in India. In the initial 5-6 years, the average monthly subscribers additions were around 0.05 to 0.1 million only and the total mobile subscribers base in December 2002 stood at 10.5 million. Although mobile telephones followed the New Telecom Policy 1994, growth was tardy in the early years because of the high price of handsets, as well as, the high tariff structure of mobile telephones. With the New Telecom Policy in 1999, the industry heralded several pro-consumer initiatives. Mobile subscriber additions started picking up. The number of mobile phones added throughout the country in 2003 was 16 million, followed by 22 million in 2004 and 32 million in 2005. The only countries with more mobile phones than India with 123.44 million mobile phones (September 2006) are China – 408 million, USA – 170 million, and Russia – 130 million.
Students send protest letter to Kalam

A statement by..., the vice-chancellor of a University on an NDTV show, has sparked off huge protests among students...

The vice-chancellor had defended his decision to impose a dress code and ban cell phones by saying students had welcomed it.

But the students have denied supporting the ban. And in the first organised protest, they are writing to President APJ Abdul Kalam asking him to intervene.

Source: http://www.ndtv.com (Thursday, January 19, 2006 (Chennai))

Exercise for Boxes 6.5, 6.6 and 6.7

- Carefully read the above 3 boxes.
- What ideas do they convey about the phenomenal growth in cell phones usage?
- Can you see any changes in the attitude and acceptability towards cell phones?

Initially in the late 1980s, cell phones are being looked at with distrust (misused by criminal elements). As late as 1998, they are perceived as luxury items (only the rich can own it and so owners should be taxed). By 2006, we have become the country with the fourth largest usage of cell phones. They have become so much part of our life that students are ready to go on a strike and appeal to the President of the country when denied cell phone usage in colleges.

Try and organise a discussion in the class on the reasons for the amazing growth in cell phones usage in India.

- Has it happened because of clever marketing and media campaign? Is it still a status symbol?
- Or, is there a strong need for remaining ‘connected’, communicating with friends and near and dear ones?
- Are parents encouraging its usage in order to lessen their anxieties about children’s whereabouts?
- Try and find out the different reasons why the youth strongly feel the need for cell phones.
GLOBALISATION AND LABOUR

GLOBALISATION AND A NEW INTERNATIONAL DIVISION OF LABOUR

A new international division of labour has emerged in which more and more routine manufacturing production and employment is done in the Third World cities. You have already dealt with outsourcing in chapter 4 and contract farming in chapter 5. Here we simply draw upon the example of Nike company to illustrate how this works.

Nike grew enormously from its inception in the 1960s. Nike grew as an importer of shoes. The founder Phil Knight imported shoes from Japan and sold them at athletics meetings. The company grew to a multinational enterprise, a transnational corporation. Its headquarters are in Beaverton, just outside Portland, Oregon. Only two US factories ever made shoes for Nike. In the 1960s they were made in Japan. As costs increased production shifted to South Korea in mid-1970s. Labour costs grew in South Korea, so in the 1980s production widened to Thailand and Indonesia. In the 1990s we in India produce Nike. However, if labour is cheaper elsewhere production centres will move somewhere else. This entire process makes the labouring population very vulnerable and insecure. This flexibility of labour often works in favour of the producers. Instead of mass production of goods at a centralised location (Fordism), we have moved to a system of flexible production at dispersed locations (post-Fordism).

General Motors produces an ostensibly American car such as Pontiac Le Mans. Of the showroom price of $20,000, only $7,600 goes to Americans (workers and management in Detroit, lawyers and bankers in New York, lobbyists in Washington, and General Motors shareholders all over the country).

Of the rest:
- 48 per cent goes to South Korea for labour and assembly.
- 28 per cent to Japan for advanced components such as engines and electronics.
- 12 per cent to Germany for styling and design engineering.
- 7 per cent to Taiwan and Singapore for small components.
- 4 per cent to the United Kingdom for marketing, and about
- 1 per cent to Barbados or Ireland for data processing

(Reich 1991)
GLOBALISATION and EMPLOYMENT

Another key issue regarding globalisation and labour is the relationship between employment and globalisation. Here too we see the uneven impact of globalisation. For the middle class youth from urban centers, globalisation and the IT revolution has opened up new career opportunities. Instead of routinely picking up BSc/BA/BCom degree from colleges, they are learning computer languages at computer institutes or taking up jobs at call centers or Business Process Outsourcing (BPO) companies. They are working as sales persons in shopping malls or picking up jobs at the various restaurants that have opened up. Yet as the box 6.9 shows broader trends of employment are disappointing.

GLOBALISATION and POLITICAL CHANGES

In many ways it was a major political change, namely, the collapse of the erstwhile socialist world that hastened globalisation. And also gave a specific economic and political approach to the economic policies that underpin globalisation. These changes are often termed as neo-liberal economic measures. We have already seen what concrete steps the liberalisation policy took in India. Broadly these policies reflect a political vision of free enterprise which believes that a free reign to market forces will be both efficient and fair. It is, therefore, critical of both state regulation and state subsidies. The existing process of globalisation in this sense does have a political vision as much as an economic vision. However, the possibilities that there can be a globalisation which is different do exist. We, thus have the concept of an inclusive globalisation, that is one, which includes all sections of society.

Another significant political development which is accompanying globalisation is the growth of international and regional mechanisms for political collaboration. The European Union (EU), the Association of South East Asian Nations (ASEAN), South Asian Regional Conference (SARC) and more recently South Asian Federation of Trade Association (SAFTA) are just some of the examples that indicate the greater role of regional associations.

The other political dimension has been the rise of International Governmental Organisations. (IGOs) and International Non-Governmental Organisations (INGOs). An intergovernmental organisation is a body that is established by participating governments and given responsibility for regulating, or overseeing a particular domain of activity that is transnational in scope. The World Trade Organisation (WTO) for instance increasingly has a major say in the rules that govern trade practices.
As the name suggests, INGOs differ from intergovernmental organisations in that they are not affiliated with government institutions. Rather they are independent organisations, which make policy decisions and address international issues. Some of the best known INGOs are Greenpeace (see chapter 8, The Red Cross and Amnesty International, Medecins Sans Frontieres (Doctors Without Borders). Find out more about them.

**GLOBALISATION AND CULTURE**

There are many ways that globalisation affects culture. We saw earlier that over the ages India has had an open approach to cultural influences and have been enriched because of this. The last decade has seen major cultural changes leading to fears that our local cultures would be overtaken. We saw earlier that our cultural tradition has been wary of the *kupamanduka*, the frog that lives its whole life within a well, knows nothing else, and is suspicious of everything outside it. It talks to no one, and argues with no one on anything. It merely harbours the deepest suspicion of the outside world. Fortunately for us we retain our ‘traditional’ open-ended attitude to this day. Thus there are heated debates in our society not just about political and economic issues but also about changes in clothes, styles, music, films, languages, body language. You will recall from chapter 1 and 2 how the 19th century reformers and early nationalists also debated on culture and tradition. The issues today are in some ways the same, in some ways different. What is perhaps different is the scale and intensity of change.

**HOMOGENISATION VERSUS GLOBALISATION OF CULTURE**

A central contention is that all cultures will become similar, that is homogeneous. Others argue that there is an increasing tendency towards globalisation of culture. Globalisation refers to the mixing of the global with the local. It is not entirely spontaneous. Nor is it entirely delinked from the commercial interests of globalisation.

It is a strategy often adopted by foreign firms while dealing with local traditions in order to enhance their marketability. In India, we find that all the foreign television channels like Star, MTV, Channel V and Cartoon Network use Indian languages. Even McDonald sells only vegetarian and chicken products in India and not its beef products, which are popular abroad. McDonald’s goes vegetarian during the Navaratri festival. In the field of music, one can see the growth of popularity of ‘Bhangra pop’, ‘Indi pop’, fusion music and even remixes.

### Activity 6.6

- Identify other instances of globalisation. Discuss.
- Have you noticed any changes in films produced by Bollywood. While at one time there were scenes shot in foreign countries, the stories remained local. Then there were stories where characters returned to India even if part of the story was set abroad. Now there are stories set entirely outside India. Discuss.
We have already seen how the strength of Indian culture has been its open ended approach. We also saw how through the modern period our reformers and nationalists actively debated tradition and culture. Culture cannot be seen as an unchanging fixed entity that can either collapse or remain the same when faced with social change. What is more likely even today is that globalisation will lead to the creation of not just new local traditions but global ones too.

**Gender and Culture**

Very often defenders of a fixed traditional idea of cultural identity defend undemocratic and discriminating practices against women in the name of cultural identity. These could range from a defence of sati to defence of women’s exclusion from education and participation in public matters. Globalisation can then be taken as a bogey to defend unjust practices against women. Fortunately for us in India we have been able to retain and develop a democratic tradition and culture that allows us to define culture in a more inclusive and democratic fashion.

**Culture of Consumption**

Often when we speak of culture we refer to dresses, music, dances, food. However, culture as we know refers to a whole way of life. There are two uses of culture that any chapter on globalisation should mention. They are the culture of consumption and corporate culture. Look at the crucial role that cultural consumption is playing in the process of globalisation especially in shaping the growth of cities. Till the 1970s the manufacturing industries used to play a major role in the growth of cities. Presently, cultural consumption (of art, food, fashion, music, tourism) shapes to a large extent the growth of cities. This is evident in the spurt in the growth of shopping malls, multiplex cinema halls, amusement parks and ‘water world’ in every major city in India. Most significantly advertisements and the media in general promote a culture where spending is important. To be careful with money is no longer a virtue. Shopping is a past time actively encouraged.

Successive successes in fashion pageants like Miss Universe and Miss World have lead to a tremendous growth in industries in the fields of fashion, cosmetics and health. Young girls dream of being an Aishwarya Rai or Sushmita Sen. Popular game shows like Kaun Banega Crorepati actually made it seem possible that your fortunes could turn over a few games.
Corporate culture is a branch of management theory that seeks to increase productivity and competitiveness through the creation of a unique organisational culture involving all members of a firm. A dynamic corporate culture - involving company events, rituals and traditions - is thought to enhance employee loyalty and promote group solidarity. It also refers to the way of doing things, of promotion and packaging products.
The spread of multinational companies and the opportunities opened up by the information technology revolution has created in the metropolitan cities in India class of upwardly mobile professionals working in software firms, multinational banks, chartered accountancy firms, stock markets, travel, fashion designing, entertainment, media and other allied fields. These high-flying professionals have highly stressful work schedules, get exorbitant salaries and are the main clientele of the booming consumer industry.

**Threat to Many Indigenous Craft and Literary Traditions and Knowledge Systems**

Yet another link between cultural forms and globalisation is evident from the condition of many indigenous craft and literary traditions and knowledge systems. It is, however, important to remember that modern development even prior to the stage of globalisation did make inroads into traditional cultural forms and occupations based on them. But the sheer scale and intensity of change is enormous. For instance about 30 theatre groups, which were active around the textile mills area of Parel and Girgaum of Mumbai city, have become defunct, as most of the mill workers are out of jobs in these areas. Some years back, there were reports of large number of suicides by the traditional weavers in Sircilla village of Karimnagar district and in Dubakka village in Medak district, both in Andhra Pradesh. These weavers with no means to invest in technology were unable to adapt to the changing consumer tastes and competition from power looms.

Similarly, various forms of traditional knowledge systems especially in the fields of medicine and agriculture have been preserved and passed on from one generation to the other. Recent attempts by some multi-national companies to patent the use of Tulsi, Haldi (turmeric), Rudraksha and Basmati rice has highlighted the need for protecting the base of its indigenous knowledge systems.

The condition of our dombari community is very bad. Television and radio have snatched away our means of livelihood. We perform acrobatics but because of the circus and the television, which have reached even in remote corners and villages, nobody is interested in our performances. We do not get even a pittance, however hard we perform. People watch our shows but just for entertainment, they never pay us anything. They never bother about the fact that we are hungry. Our profession is dying.

*(More 1970)*
Globalisation and Social Change

It is no easy task to sum up the diverse and complex ways that globalisation is affecting our lives. One will not even attempt it. One leaves this task to you. We have not discussed the impact of globalisation on industry and agriculture in any detail here in this chapter. You have to draw from chapter 4 and 5 to build up the story of globalisation and social change in India. In the recounting of this story, use your sociological imagination.

1. Choose any topic that is of interest to you and discuss how you think globalisation has affected it. You could choose cinema, work, marriage or any other topic.

2. What are the distinctive features of a globalised economy? Discuss.

3. Briefly discuss the impact of globalisation on culture?

4. What is glocalisation? Is it simply a market strategy adopted by multinational companies or is genuine cultural synthesis taking place? Discuss.

it's not that people are not sensitive to cell phones ringing. It's that the habit has not caught on.

New Delhi: So, you think the title track from the latest Salman Khan blockbuster is really cool, and it adds to your personality quotient, that whoever dials your mobile number gets to hear it. After all, one can never have enough of good music! Oh, so you think.

Pointing your personal preferences at others?

A ringing mobile phone in a crowded hall causes a ripple effect. Just that, even the simplest courtesy of keeping the phone silent is missing. The only thing that works for some people is the adverse response of those around them.

This is where the real problem lies. If you leave out the blameworthy aspect of "all",

Mass Media and Communications
The mass media include a wide variety of forms, including television, newspapers, films, magazines, radio, advertisements, video games and CDs. They are referred to as ‘mass’ media because they reach mass audiences – audiences comprised very large numbers of people. They are also sometimes referred to as mass communications. For many in your generation it is probably difficult to imagine a world without some form of mass media and communications.

ACTIVITY 7.1

- Imagine a world where there is no television, no cinema, no newspapers, no magazines, no internet, no telephones, no mobile phones.
- Write down your daily activities in a day. Identify the occasions when you used the media in some way or the other.
- Find out from an older generation what life was like without any of these forms of communication. Compare it with your life.
- Discuss the ways work and leisure has changed with developments in communication technologies.

Mass media is part of our everyday life. In many middle class households across the country people wake up only to put on the radio, switch on the television, look for the morning newspaper. The younger children of the same households may first glance at their mobile phones to check their missed calls. Plumbers, electricians, carpenters, painters and sundry other service providers in many urban centres have a mobile telephone where they can be easily contacted. Many shops in cities increasingly have a small television set. Customers who come in may exchange bits of conversation about the cricket match being telecasted or the film being shown. Indians abroad keep regular touch with friends and families back home over the internet and telephone. Migrants from working class population in the cities are regularly in touch with their families in the villages over the phone. Have you seen the range of advertisements of mobile phones?
Have you noticed the diverse social groups that they are catering to? Are you surprised that the CBSE Board results are available to you on both the internet and over the mobile phone. Indeed this very book is available on the internet.

It is obvious that there has been a phenomenal expansion of mass communication of all kinds in recent years. As students of sociology, there are many aspects to this growth which is of great interest to us. First, while we recognise the specificity of the current communication revolution, it is important to go back a little and sketch out the growth of modern mass media in the world and in India. This helps us realise that like any other social institution the structure and content of mass media is shaped by changes in the economic, political and socio-cultural contexts. For instance, we see how central the state and its vision of development influenced the media in the first decades after independence. And how in the post 1990 period of globalisation the market has a key role to play. Second, this helps us better appreciate how the relationship between mass media and communication with society is dialectical. Both influence each other. The nature and role of mass media is influenced by the society in which it is located. At the same time the far reaching influence of mass media on society cannot be over-emphasised. We shall see this dialectical relationship when we discuss in this chapter (a) the role of media in colonial India, (b) in the first decades after independence and (c) and finally in the context of globalisation. Third, mass communication is different from other means of communication as it requires a formal structural organisation to meet large-scale capital, production and management demands. You will find, therefore, that the state and/or the market have a major role in the structure and functioning of mass media. Mass media functions through very large organisations with major investments and large body of employees. Fourth, there are sharp differences between how easily different sections of people can use mass media. You will recall the concept of digital divide from the last chapter.
7.1 The Beginnings of Modern Mass Media

The first modern mass media institution began with the development of the printing press. Although the history of print in certain societies dates back to many centuries, the first attempts at printing books using modern technologies began in Europe. This technique was first developed by Johann Gutenberg in 1440. Initial attempts at printing were restricted to religious books.

With the Industrial Revolution, the print industry also grew. The first products of the press were restricted to an audience of literate elites. It was only in the mid 19th century, with further development in technologies, transportation and literacy that newspapers began to reach out to a mass audience. People living in different corners of the country found themselves reading or hearing the same news. It has been suggested that this was in many ways responsible for people across a country to feel connected and develop a sense of belonging or ‘we feeling’. The well known scholar Benedict Anderson has thus argued that this helped the growth of nationalism, the feeling that people who did not even know of each other’s existence feel like members of a family. It gave people who would never meet each other a sense of togetherness. Anderson thus suggested that we could think of the nation as an ‘imagined community’.

You will recall how 19th century social reformers often wrote and debated in newspapers and journals. The growth of Indian nationalism was closely linked to its struggle against colonialism. It emerged in the wake of the institutional changes brought about by British rule in India. Anti colonial public opinion was nurtured and channelised by the nationalist press, which was vocal in its opposition to the oppressive measures of the colonial state. This led the colonial government to clamp down on the nationalist press and impose censorship, for instance during the Ilbert Bill agitation in 1883. Association with the national
movement led some of the nationalist newspapers like *Kesari* (Marathi), *Mathrubhumi* (Malayalam), *Amrita Bazar Patrika* (English) to suffer the displeasure of the colonial state. But that did not prevent them from advocating the nationalist cause and demand an end to colonial rule.

**Box 7.1**

- Though a few newspapers had been started by people before Raja Rammohun Roy, his *Sambad-Kaumudi* in Bengali published in 1821, and *Mirat-Ul-Akbar* in Persian published in 1822, were the first publications in India with a distinct nationalist and democratic approach.
- Fardoonji Murzban was the pioneer of the Gujarati Press in Bombay. It was as early as 1822 that he started the *Bombay Samachar* as a daily.
- Ishwar Chandra Vidyasagar started the *Shome Prakash* in Bengali in 1858.
- *The Times of India* was founded in Bombay in 1861.
- *The Pioneer* in Allahabad in 1865.
- *The Madras Mail* in 1868.
- *The Civil and Military Gazette* in Lahore in 1876.

(Desai 1948)

Under British rule newspapers and magazines, films and radio comprised the range of mass media. Radio was wholly owned by the state. National views could not be, therefore, expressed. Newspapers and films though autonomous from the state were strictly monitored by the Raj. Newspapers and magazines either in English or vernacular were not very widely circulated as the literate public was limited. Yet their influence far out stripped their circulation as news and information was read and spread by word of mouth from commercial and administrative hubs like markets and trading centers as well as courts and towns. The print media carried a range of opinion, which expressed their ideas of a ‘free India’. These variations were carried over to independent India.
The Approach

In independent India, Jawaharlal Nehru, the first prime minister, called upon the media to function as the watchdog of democracy. The media was expected to spread the spirit of self-reliance and national development among the people. You will recall the general thrust of development in the early years of independence in India from your earlier chapters. The media was seen as a means to inform the people of the various developmental efforts. The media was also encouraged to fight against oppressive social practices like untouchability, child marriages, and ostracism of widows, as well as beliefs of witchcraft and faith healing. A rational, scientific ethos was to be promoted for the building of a modern industrial society. The Films Division of the government produced newsreels and documentaries. These were shown before the screening of films in every movie theatre, documenting the development process as directed by the state.

Activity 7.2

Ask anyone you know from a generation that grew up in the first two decades after independence about the documentaries that were routinely shown before the screening of films. Write down their recollections.

Radio

Radio broadcasting which commenced in India through amateur ‘ham’ broadcasting clubs in Kolkata and Chennai in the 1920s matured into a public broadcasting system in the 1940s during the World War II when it became a major instrument of propaganda for Allied forces in South-east Asia. At the time of independence there were only 6 radio stations located in the major cities catering primarily to an urban audience. By 1950 there were 546,200 radio licences all over India.

Amita Roy (later Malik) as disc jockey at All India Radio, Lucknow, 1944
Noted media person and film critic, Amita joined All India Radio in 1944 for a couple of years when there were few women in the field, later going on to broadcast with the BBC, CBC, and other international broadcasting organisations. Doyenne among women journalists, she is well known for her film, radio, and TV criticisms and columns in leading newspapers.

Courtesy: Amita Malik, New Delhi
Since the media was seen as an active partner in the development of the newly free nation the AIR's programmes consisted mainly of news, current affairs, discussions on development. The box below captures the spirit of those times.

Apart from All India Radio (AIR) broadcasts news there was Vividh Bharati, a channel for entertainment that was primarily broadcasting Hindi film songs on listeners request. In 1957 AIR acquired the hugely popular channel Vividh Bharati, which soon began to carry sponsored programmes and advertisements and grew to become a money-spinning channel for AIR.

BOX 7.2

**AIR's broadcasts did make a difference**

In the 1960s, when the high yielding varieties of food crops, as a part of the Green Revolution, were introduced for the first time in the country. It was All India Radio which undertook a major countryside campaign on these crops on a sustained day-to-day basis for over 10 years from 1967.

For this purpose, special programmes on the high yielding varieties were formed in many stations of AIR all over the country. These programme units, manned by subject specialists, undertook field visits and recorded and broadcast first hand accounts of the farmers, who started growing the new varieties of paddy and wheat.

*Source: B. R. Kumar "AIR's broadcasts did make a difference", The Hindu December 31st 2006.*

When India gained independence in 1947, All India Radio had an infrastructure of six radio stations, located in metropolitan cities. The country had 280,000 radio receiver sets for a population of 350 million people. After independence the government gave priority to the expansion of the radio broadcasting infrastructure, especially in state capitals and in border areas. Over the years, AIR has developed a formidable infrastructure for radio broadcasting in India. It operates a three-tiered – national, regional, and local – service to cater to India's geographic, linguistic and cultural diversity.

The major constraint for the popularisation of radio initially was the cost of the radio set. The transistor revolution in the 1960s made the radio more accessible by making it mobile as battery operated sets and reducing the unit
price substantially. In 2000, around 110 million households (two-thirds of all Indian households) were listening to radio broadcasts in 24 languages and 146 dialects. More than a third of them were rural households.

**TELEVISION**

Television programming was introduced experimentally in India to promote rural development as early as 1959. Later, the Satellite Instructional Television Experiment (SITE) broadcasted directly to community viewers in the rural areas of six states between August 1975 and July 1976. These instructional broadcasts were broadcast to 2,400 TV sets directly for four hours daily. Meanwhile, television stations were set up under Doordarshan in four cities (Delhi, Mumbai, Srinagar, and Amritsar) by 1975. Three more stations in Kolkata, Chennai, and Jalandhar were added within a year. Every broadcasting centre had its own mix of programmes, comprising news, children’s and women’s programmes, farmers’ programmes, as well as, entertainment programmes.

As programmes become commercialised and were allowed to carry advertisements of their sponsors, a shift in the target audience was evident. Entertainment programmes grew and were directed to the urban consuming class. The advent of colour broadcasting during the 1982 Asian Games in Delhi and the rapid expansion of the national network led to rapid commercialisation of television broadcasting. During 1984–85 the number of television transmitters increased all over India, covering a large proportion of the population. It was also the time when indigenous soap operas, like *Hum Log* (1984–85) and *Buniyaad* (1986–87) were aired. They were hugely popular and attracted substantial advertising revenue for Doordarshan as did the broadcasting of the epics—*Ramayana* (1987–88) and *Mahabharata* (1988–90). Today, the situation of the television industry is like this — the Annual Report released by TRAI for the year 2015–16 clearly stated that India has the world’s second largest TV market after China. As per industry estimates, as on March 2016, of
Hum Log: A Turning Point

*Hum Log* was India’s first long-running soap opera... This pioneering programme utilised the entertainment-education strategy by intentionally placing educational content in this entertainment message.

Some 156 episodes of *Hum Log* were broadcast in Hindi for 17 months in 1984-85. The television programme promoted social themes, such as gender equality, small family size, and national integration. At the end of each 22-minute episode, a famous Indian actor, Ashok Kumar, summarised the educational lessons from the episode in an epilogue of 30 to 40 seconds. Kumar connected the drama to viewers’ everyday lives. For instance, he might comment on a negative character who is drunk and beats his wife by asking: “why do you think that people, like Basesar Ram drink too much, and then behave badly? Do you know anyone like this? What can be done to reduce incidents of alcoholism? What can you do?

(Singhal and Rogers, 1989). A study of *Hum Log*’s audience showed that a high degree of parasocial interaction occurred between the audience members and their favourite *Hum Log* characters. For example, many *Hum Log* viewers reported that they routinely adjusted their daily schedules to ‘meet’ their favourite character ‘in the privacy of their living rooms’. Many other individuals reported talking to their favourite characters through the television sets; for instance, “Don’t worry, Badki. Do not give up your dream of making a career”.

*Hum Log* achieved audience ratings of 65 to 90 per cent in North India and between 20 and 45 per cent in South India. About 50 million individuals watched the average broadcast of *Hum Log*. One unusual aspect of this soap opera was the huge number of letters, over 400,000, that it attracted from viewers; so many that most of them could not be opened by Doordarshan officials. (Singhal and Rogers 2001)

The advertising carried by *Hum Log* promoted a new consumer product in India, *Maggi* 2-Minute noodles. The public rapidly accepted this new consumer product, suggesting the power of television commercials. Advertisers began to line up to purchase airtime for television advertising, and the commercialisation of Doordarshan began.

The existing 2.841 million households, around 1.811 million have television sets, which are being provided services of cable TV, DTH and IPTV, in addition to a terrestrial TV network of Doordarshan.

**PRINT MEDIA**

The beginnings of the print media and its role in both the spread of the social reform movement and the nationalist movement have been noted. After Independence, the print media continued to share the general approach of being a partner in the task of nation building by taking up developmental issues, as well as, giving voice to the widest section of people. The brief extract in the following box will give you a sense of the commitment.
The gravest challenge that the media faced was with the declaration of Emergency in 1975 and censorship of the media. Fortunately, the period ended and democracy was restored in 1977. India with its many problems can be justifiably proud of a free media.

At the start of the chapter we had mentioned how mass media is different from other means of communication as it requires a formal structural organisation to meet large scale capital, production and management demands. And also like any other social institution the mass media also varies in structure and content according to different economic, political and socio-cultural context. You will now notice how at different points in time both the content and style of media changes. At some points the state has a greater role to play. At other times the market does. In India this shift is very visible in recent times. This change has also led to debates about what role the media ought to play in a modern democracy. We look at these new developments in the next section.

### 7.3 Globalisation and the Media

We have already read about the far reaching impact of globalisation as well as its close link with the communication revolution in the last chapter. The media have always had international dimensions – such as the gathering of new stories and the distribution of primarily western films overseas. However, until the 1970s most media companies operated within specific domestic markets in accordance with regulations from national governments. The media industry was also differentiated into distinct sectors – for the most part, cinema, print media, radio and television broadcasting all operated independently of one another.
In the past three decades, however, profound transformations have taken place within the media industry. National markets have given way to a fluid global market, while new technologies have led to the fusion of forms of media that were once distinct.

**Globalisation and the case of music**

It has been argued that the musical form is one that lends itself to globalisation more efficiently than any other. This is because music is able to reach people who may not know the written and spoken language. The growth of technology—from personal stereo systems to music television (such as the MTV) to the compact disc (CD) – have provided newer, more sophisticated ways for music to be distributed globally.

**The fusion of forms of media**

Although the music industry is becoming ever more concentrated in the hands of a few international conglomerates, some feel that it is under a great threat. This is because the Internet allows music to be downloaded digitally, rather than purchased in the form of CDs or cassettes from local music stores. The global music industry is currently comprised of a complex network of factories, distribution chains, music shops and sales staff. If the internet removes the need for all these elements by allowing music to be marketed and downloaded directly, what will be left of the music industry?

**Exercise for Box 7.8**

Read the texts in the box carefully. Discuss.

1. Find out the names of a few music conglomerates or corporations.
2. Have you thought of the ring tones that people now download for their mobile phones? Is this the fusion of forms of media?
3. Have you watched any of the musical contests on television where the audience is expected to SMS their choice? Is this again an instance of the fusion of forms of media? What forms are involved?
4. Do you enjoy songs whose words you may not understand? What do you feel about the new forms of music where there is a mix not just of musical forms but also of language?
5. Have you heard any fusion music of Rap and Bhangra. Where did the two forms originate?
6. There are probably many other issues that you can think of? Discuss and write a short essay on your discussions.

We began with the case of the music industry and the far reaching consequences that globalisation has had on it. The changes that have taken place in mass media is so immense that this chapter will probably be only able to give you a fragmentary understanding. As a young generation you can build up on the information provided. Let us have a look at the changes that globalisation has brought about on the print media (primarily newspapers and magazines), the electronic media (primarily television), and on the radio.
We have seen important newspapers and magazines were for the spread of the freedom movement. It is often believed that with the growth of the television and the Internet the print media would be sidelined. However, in India, we have seen the circulation of newspapers grow. As Box 7.9 suggests, new technologies have helped boost the production and circulation of newspapers. A large number of glossy magazines have also made their entry to the market.

The Indian Language Newspaper Revolution

The most significant happening in the last few decades has been the Indian language newspaper revolution. Hindi, Telugu and Kannada recorded the highest growth. Print publications in the country had an increase in the average daily circulation of 23.7 million copies from 2006 to 2016. From 39.1 million in 2006, the average number of copies circulated a day grew to 62.8 million, a compound annual growth rate (CAGR) of 4.87 per cent from 2006 to 2016. Among the four main geographic zones, the north showed the highest growth at 7.83 per cent. Growth in the south, west and east was 4.95 per cent, 2.81 per cent and 2.63 per cent, respectively. The top two Hindi dailies in India are Dainik Jagran and Dainik Bhaskar with average qualifying sales of 3.92 million and 3.81 million, respectively (July-December 2016).

Source: Audit Bureau of Circulation, 2016-17.

The Eenadu story also exemplifies the success of the Indian language press. Ramoji Rao the founder of Eenadu, had successfully organised a chit-fund before launching the paper in 1974. By associating with appropriate causes in rural areas, like the anti-arrack movement in the mid-1980s, the Telugu newspaper was able to reach the countryside. This prompted it to launch 'district dailies' in 1989. These were tabloid inserts or features carrying sensational news from particular districts, as well as, classified advertisements from villages and small towns of the area. By 1998, Eenadu was being published from 10 towns in Andhra Pradesh and its circulation accounted for 70 per cent of the audited Telugu daily circulation.
As is evident, the reasons for this amazing growth in Indian language newspapers are many. First, there is a rise in the number of literate people who are migrating to cities. The Hindi daily *Hindustan* in 2003 printed 64,000 copies of their Delhi edition, which jumped to 425,000 by 2005. The reason was that, of Delhi’s population of one crore and forty-seven lakhs, 52 per cent had come from the Hindi belt of the two states of Uttar Pradesh and Bihar. Out of this, 47 per cent have come from a rural background and 60 per cent of them are less than 40 years of age.

Second, the needs of the readers in the small towns and villages are different from that of the cities and the Indian language newspapers cater to those needs. Dominant Indian language newspapers such as *Malayala Manorama* and the *Eenadu* launched the concept of local news in a significant manner by introducing district and whenever necessary, block editions. *Dina Thanthi*, another leading Tamil newspaper, has always used simplified and colloquial language. The Indian language newspapers have adopted advanced printing technologies and also attempted supplements, pullouts, and literary and niche booklets. Marketing strategies have also marked the *Dainik Bhaskar* group’s growth as they carry out consumer contact programmes, door-to-door surveys, and research. This also brings back the point that modern mass media has to have a formal structural organisation.

**Shift in circulation of Newspapers in India**

According to recently published data of National Readership Study (NRS 2006) the largest growth in readership has been in Hindi belt. Indian language dailies as a whole have grown substantially in the last year from 191 million readers to 203.6 million readers. The readership of English dailies on the other hand, has stagnated at around 21 million. Hindi dailies *Dainik Jagran* (with 21.2 million) and *Dainik Bhaskar* (with 21.0 million) are heading the list, while *The Times of India* is the only English daily with a readership of over five million (7.4 million). Of the 18 dailies which are in ‘five million club’, six are in Hindi, three in Tamil, two each in Gujarati, Malayalam and Marathi and one each in Bengali, Telugu and English (*The Hindu, Delhi, August 30, 2006*).

While English newspapers, often called ‘national dailies’, circulate across regions, vernacular newspapers have vastly increased their circulation in the states and the rural hinterland. In order to compete with the electronic media, newspapers, especially English language newspapers have on the one hand reduced prices and on the other hand brought out editions from multiple centres.

**Activity 7.4**

- Find out how many places do the newspaper you are most familiar with brought out from?
- Have you noticed how there are supplements that cater to city specific or town specific interests and events?
- Have you noticed the many commercial supplements that accompany many newspapers these days?
Many feared that the rise in electronic media would lead to a decline in the circulation of print media. This has not happened. Indeed it has expanded. This process has, however, often involved cuts in prices and increasing dependence on the sponsors of advertisements who in turn have a larger say in the content of newspapers. The following box captures the logic of this practice.

**Changes in Newspaper Production: The Role of Technology**

From the late 1980s and early 1990s, newspapers have become fully automatic – from reporter’s desk to final page proof. The use of paper has been completely eliminated with this automated chain. This has become possible because of two technological changes – networking of personal computers (PCs) through LANs (local area networks) and use of newsmaking software like Newsmaker and other customised software.

Changing technology has also changed the role and function of a reporter. The basic tools of a news reporter — a shorthand notebook, pen, typewriter and a plain old telephone has been replaced by new tools — a mini tape recorder, a laptop or a PC, mobile or satellite phone, and other accessories, like modem. All these technological changes in news gathering have increased the speed of news and helped newspaper managements push their deadlines to dawn. They are also able to plan a greater number of editions and provide the latest news to readers. A number of language newspapers are using the new technologies to bring out separate editions for each of the districts. While print centres are limited, the number of editions has grown manifold.

Newspaper chains like Meerut-based *Amar Ujala*, are using new technology for news gathering, as well as, for improving pictorial coverage. The newspaper has a network of nearly a hundred reporters and staffs and an equal number of photographers, feeding news to all its 13 editions spread across Uttar Pradesh and Uttarakhand. All hundred correspondents are equipped with PCs and modems for news transmission, and the photographers carry digital cameras with them. Digital images are sent to the central news desk via modems.
A media manager explains the reasons for this:
The trouble with the print media is the high gestation period for returns and the high cost of production. The newspaper’s or magazine’s cover price alone doesn’t cover these costs. …If the cost of producing the paper is Rs. 5 and if you are selling it at Rs. 2 then you are selling it at a higher subsidy. Naturally, you have to depend on advertising cost to cover your cost.
The advertiser, thus becomes the primary customer of the print media…So, I, the print media, am not trying to get readers for my product, but I get customers, who happen to be my readers, for my advertisers….Advertisers like to reach readers who are successful, who celebrate life, who consume, who are early adopters, who believe in experimentation, who are hedonists.

The then Director of the Press Institute of India elaborates on the implications of newspapers that cater to potential customers of advertisers.
For several weeks I have been going through mainline English-language newspapers looking specifically for field reports and feature articles on happenings in the rural parts of our country, small towns and growing slum colonies. Some 70 per cent of our people live in these areas which, to my mind, comprise the ‘real India’...the national press, presumed to provide the information that moulds the opinions of senior policy makers, politicians, academics and journalists themselves. They are expected to serve as watchdog over the system of governance, a role traditionally described as that of the ‘Fourth Estate’.

(Chaudhuri 2005:199-226)

The effort of the newspapers has been to widen their audience and reach out to different groups. It has been argued that newspaper reading habits have changed. While the older people read the newspaper in its entirety, younger readers often have specific interests like sports, entertainment or society gossip and directly move to the pages earmarked for these items. Segmentated interest of readers imply that a newspaper must have a plurality of ‘stories’ to appeal to a wide range of readers with varied interests. This has often led to newspapers advocating infotainment, a combination of information and entertainment to sustain the interest of readers. Production of newspaper is no longer related to a commitment to certain values that embody a tradition. Newspapers have become a consumer product and as long as numbers are big, everything is up for sale.

**Exercise for Box 7.13**

Read the text carefully.
1. Do you think readers have changed or newspapers have changed? Discuss.
2. Discuss the term infotainment. Can you think of examples. What do you think the effect of infotainment will be?
TELEVISION

In 1991 there was one state controlled TV channel Doordarshan in India. By 1998 there were almost 70 channels. Privately run satellite channels have multiplied rapidly since the mid-1990s. While Doordarshan broadcasts over 20 channels there were some 40 private television networks broadcasting in 2000. The staggering growth of private satellite television has been one of the defining developments of contemporary India. In 2002, 134 million individuals watched satellite TV on an average every week. This number went up to 190 million in 2005. The number of homes with access to satellite TV has jumped from 40 million in 2002 to 61 million in 2005. Satellite subscription has now penetrated 56 percent of all TV homes.

The Gulf War of 1991 (which popularised CNN), and the launching of Star-TV in the same year by the Whampoa Hutchinson Group of Hong Kong, signalled the arrival of private satellite Channels in India. In 1992, Zee TV, a Hindi-based satellite entertainment channel, also began beaming programs to cable television viewers in India. By 2000, 40 private cable and satellite channels were available including several that focused exclusively on regional-language broadcasting like Sun-TV, Eenadu-TV, Udaya-TV, Raj-TV, and Asianet. Meanwhile, Zee TV has also launched several regional networks, broadcasting in Marathi, Bengali and other languages.

While Doordarshan was expanding rapidly in the 1980s, the cable television industry was mushrooming in major Indian cities. The VCR greatly multiplied entertainment options for Indian audiences, providing alternatives to Doordarshan’s single channel programming. Video viewing at home and in community-based parlours increased rapidly. The video fare consisted mostly of film-based entertainment, both domestic and imported. By 1984, entrepreneurs in cities such as Mumbai and Ahmedabad had begun wiring apartment buildings to transmit several films a day. The number of cable operators exploded from 100 in 1984, to 1200 in 1988, to 15,000 in 1992, and to about 60,000 in 1999.

The coming in of transnational television companies like Star TV, MTV, Channel [V], Sony and others, worried some people on the likely impact on Indian youth and on the Indian cultural identity. But most of the transnational television channels have through research realised that the use of the familiar is more effective.
in procuring the diverse groups that constitute Indian audience. The early strategy of Sony International was to broadcast 10 Hindi films a week, gradually decreasing the number as the station produced its own Hindi language content. The majority of the foreign networks have now introduced either a segment of Hindi language programming (MTV India), or an entire new Hindi language channel (STAR Plus). STAR Sports and ESPN have dual commentary or an audio sound track in Hindi. The larger players have launched specific regional channels in languages such as Bengali, Punjabi, Marathi and Gujarati.

Perhaps the most dramatic adoption of localisation was carried out by STAR TV. In October 1996, STAR Plus, initially an all English general entertainment channel originating from Hong Kong, began producing a Hindi language belt of programming between 7 and 9 PM. By February 1999, the channel was converted to a solely Hindi Channel and all English serials shifted to STAR World, the network’s English language international channel. Advertising to promote the change included the Hinglish slogan: ‘Aapki Boli. Aapka Plus Point’ (Your language/speech. Your Plus Point) (Butcher, 2003). Both STAR and Sony continued to dub US programming for younger audience as children appeared to be able to adjust to the peculiarities that arise when the language is one and the setting another. Have you watched a dubbed programme? What do you feel about it?

### The Rescue of Prince

Prince, a 5-year old boy had fallen into a 55-ft borewell shaft in Aldeharhi village in Kurukshetra, Haryana, and was rescued by the army after a 50-hour ordeal, in which a parallel shaft was dug through a well. Along with food, a closed circuit television camera (CCTV) had been lowered into the shaft in which the little boy was trapped. Two news channels... suspended all other programmes and reporting of all other events and for two days continuous footage of the child bravely fighting off insects, sleeping or crying out to his mother was splashed on the TV screens. They even interviewed many people outside temples, asking them “what do you feel about Prince?” They asked people to send SMSes for Prince. (Prince ke liye aapka sandesh hamein bheje xxx pe). Thousands of people had descended at the site and several free community kitchens were run for two days. It soon created a national hysteria and concern, and people were shown praying in temples, mosques, churches and gurudwaras. There are other such instances when the TV is shown to intrude into the personal lives of people.

### Exercise for Box 7.14

You may have watched on television the whole rescue operation. If not you can choose from any other event. Organise a debate in class around the following points:

1. What is the likely impact of this competition among television channels to outdo one another in running exclusive live coverage of events for gaining higher viewership.
2. Can we look at this issue as a kind of voyeurism (peep into some other people’s private/intimate moments) indulged in by television cameras?
3. Is it an example of the positive role played by television media in highlighting the plight of rural poor?
Most television channels are on throughout the day, 24X7. The format for news is lively and informal. News has been made far more immediate, democratic and intimate. Television has fostered public debate and is expanding its reach every passing year. This brings us to the question whether serious political and economic issues are neglected.

There is a growing number of news channels in Hindi and English, a large number of regional channels and an equally large number of reality shows, talk shows, Bollywood shows, family soaps, interactive shows, game shows and comedy shows. Entertainment television has produced a new cadre of superstars who have become familiar household names, and their private life, rivalry on sets feed the gossip columns of popular magazines and newspapers. Reality shows like Kaun Banega Crorepati or Indian Idol or Bigg Boss have become increasingly popular. Most of these are modelled along the lines of western programmes. Which of these programmes can be identified as interactive shows, as family soaps, talk shows, reality shows. Discuss.

Soap opera
Soap operas are stories that are serialised. They are continuous. Individual stories may come to an end, and different characters appear and disappear, but the soap itself has no ending until it is taken off the air completely. Soap operas presume a history, which the regular viewer knows—he or she becomes familiar with the characters, with their personalities and their life experiences.

Radio
In 2000, AIR’s programmes could be heard in two-third of all Indian households in 24 languages and 146 dialects, over some 120 million radio sets. The advent of privately owned FM radio stations in 2002 provided a boost to entertainment programmes over radio. In order to attract audiences these privately run radio stations sought to provide entertainment to its listeners. As privately run FM channels are not permitted to broadcast any political news bulletins, many of these channel specialise in ‘particular kinds’ of popular music to retain their audiences. One such FM
channel claims that it broadcasts ‘All hits all day’! Most of the FM channels which are popular among young urban professionals and students, often belong to media conglomerates. Like ‘Radio Mirchi’ belongs to the *Times of India* group, *Red FM* is owned by *Living Media* and *Radio City* by the *Star Network*. But independent radio stations engaged in public broadcasting like National Public Radio (USA) or BBC (UK) are missing from our broadcasting landscape.

In the two films: ‘Rang de Basanti’ and ‘Lage Raho Munna Bhai’ the radio is used as an active medium of communication although both the movies are set in the contemporary period. In ‘Rang de Basanti’, the conscientious, angry college youth, inspired by the legend of Bhagat Singh assassimates a minister and then captures All India Radio to reach out to the people and disseminate their message. While in ‘Lage Raho Munna Bhai’, the heroine is a radio jockey who wakes up the country with her hearty and full-throated “Good Morning Mumbai!” the hero too takes recourse to the radio station to save a girl’s life.

The potential for using FM channels is enormous. Further privatisation of radio stations and the emergence of community owned radio stations would lead to the growth of radio stations. The demand for local news is growing. The number of homes listening to FM in India has also reinforced the world wide trend of networks getting replaced by local radio. The box below reveals not only the ingenuity of a village youth but also the need for catering to local cultures.

---

**Box 7.16**

It may well be the only village FM radio station on the Asian sub-continent.

The transmission equipment, costing little…. may be the cheapest in the world. But the local people definitely love it. On a balmy morning in India’s northern state of Bihar, young Raghav Mahato gets ready to fire up his home-grown FM radio station. Thousands of villagers, living in a 20 km (12 miles) radius of Raghav’s small repair shop and radio station …tune their … radio sets to catch their favourite station. After the crackle of static, a young, confident voice floats up the radio waves. “Good morning! Welcome to Raghav FM Mansoorpur 1! Now listen to your favourite songs,” announces anchor and friend Sambhu into a cellotape-plastered microphone surrounded by racks of local music tapes. For the next 12 hours, Raghav Mahato’s outback FM radio station plays films songs and broadcasts public interest messages on HIV and polio, and even snappy local news, including alerts on missing children and the opening of local shops. Raghav and his friend run the indigenous radio station out of Raghav’s thatched-roof Priya Electronics Shop.

The place is a cramped …rented shack stacked with music tapes and rusty electrical appliances which doubles up as Raghav’s radio station and repair shop.

He may not be literate, but Raghav’s ingenuous FM station has made him more popular than local politicians. Raghav’s love affair with the radio began in 1997 when he started out as a mechanic in a local repair shop. When the shop owner left the area, Raghav, son of a cancer-ridden farm worker, took over the shack with his friend. Sometime in 2003, Raghav, who by now had learned much about radio …in impoverished Bihar state, where many areas lack power supplies, the cheap battery-powered transistor remains the most popular source of entertainment. “It took a long time to come up with the idea and make the kit which could transmit my programmes at a fixed radio frequency.
Mass Media and Communications

CONCLUSION

That mass media is an essential part of our personal and public life today cannot be emphasised enough. This chapter in no way can capture your life experience with the media. What it does do is attempt to understand it as an important part of contemporary society. It also seeks to focus on its many dimensions – its link with the state and the market, its social organisation and management, its relationship with readers and audience. In other words it looks at both the constraints within which media operates and the many ways that it affects our lives.

The kit cost me 50 rupees, “says Raghav. The transmission kit is fitted on to an antenna attached to a bamboo pole on a neighbouring three-storey hospital. A long wire connects the contraption to a creaky, old homemade stereo cassette player in Raghav’s radio shack. Three other rusty, locally made battery-powered tape recorders are connected to it with colourful wires and a cordless microphone.

The shack has some 200 tapes of local Bhojpuri, Bollywood and devotional songs, which Raghav plays for his listeners. Raghav’s station is truly a labour of love - he does not earn anything from it. His electronic repair shop work brings him some two thousand rupees a month. The young man, who continues to live in a shack with his family, doesn’t know that running a FM station requires a government license. “I don’t know about this. I just began this out of curiosity and expanded its area of transmission every year,” he says.

So when some people told him sometime ago that his station was illegal, he actually shut it down. But local villagers thronged his shack and persuaded him to resume services again. It hardly matters for the locals that Raghav FM Mansoorpur 1 does not have a government license – they just love it.

“Women listen to my station more than men,” he says. “Though Bollywood and local Bhojpuri songs are staple diet, I air devotional songs at dawn and dusk for women and old people.” Since there’s no phone-in facility, people send their requests for songs through couriers carrying handwritten messages and phone calls to a neighbouring public telephone office. Raghav’s fame as the ‘promoter’ of a radio station has spread far and wide in Bihar. People have written to him, wanting work at his station, and evinced interest in buying his ‘technology’.

1. Trace out the changes that have been occurring in the newspaper industry? What is your opinion on these changes?

2. Is radio as a medium of mass communication dying out? Discuss the potential that FM stations have in post-liberalisation India?

3. Trace the changes that have been happening in the medium of television. Discuss.

REFERENCES

Fourth session of the All-India Women’s Conference (AIWC), Bombay, 1930

Sarojini Naidu, then President of AIWC, is sitting in the second row, 10th from the right (in a dark sari). To her left is Lady Vidyagauri Nilkarni Bhadra. In the same row, to the extreme right (the woman with a hat) is Margaret E. Cousins, an Irish suffragette, theosophist, associate of Annie Besant, and founder-member of AIWC. In this session she was one of the Vice-Presidents of the organization. The AIWC was set up in 1920 and was involved in the freedom struggle and addressed issues of women’s education and their right to vote.

8 Social Movements
A great many students and office-workers around the world go to work only for five or six days. And rest on the weekends. Yet, very few people who relax on their day off realise that this holiday is the outcome of a long struggle by workers. That the work-day should not exceed eight hours, that men and women should be paid equally for doing the same work, that workers are entitled to social security and pension – these and many other rights were gained through social movements. Social movements have shaped the world we live in and continue to do so.

We often assume that the rights we enjoy just happened to exist. It is important to recall the struggles of the past, which made these rights possible. You have read about the 19th century social reform movements, of the struggles against caste and gender discrimination and of the nationalist movement in India that brought us independence from colonial rule in 1947. You are familiar also with the many nationalist movements around the world in Asia and Africa and Americas that put an end to colonial rule. The socialist movements world over, the civil rights movement in the United States in the 1950s and 1960s that fought for equal rights for Blacks, the anti apartheid struggle in South Africa have all changed the world in fundamental ways. Social movements not
only change societies. They also inspire other social movements. You saw in chapter 3 how the Indian national movement shaped the making of the Indian Constitution. And how in turn the Indian Constitution played a major role in bringing about social change.

8.1 FEATURES OF A SOCIAL MOVEMENT

People may damage a bus and attack its driver when the bus has run over a child. This is an isolated incident of protest. Since it flares up and dies down it is not a social movement. A social movement requires sustained collective action over time. Such action is often directed against the state and takes the form of demanding changes in state policy or practice. Spontaneous, disorganised protest cannot be called a social movement either. Collective action must be marked by some degree of organisation. This organisation may include a leadership and a structure that defines how members relate to each other, make decisions and carry them out. Those participating in a social movement also have shared objectives and ideologies. A social movement has a general orientation or way of approaching to bring about (or to prevent) change. These defining features are not constant. They may change over the course of a social movement’s life.

Social movements often arise with the aim of bringing about changes on a public issue, such as ensuring the right of the tribal population to use the forests or the right of displaced people to settlement and compensation. Think of other issues that social movements have taken up in the past and present. While social movements seek to bring in social change, counter movements sometimes arise in defence of status quo. There are many instances of such counter movements. When Raja Rammohun Roy campaigned against sati and formed the Brahmo Samaj, defenders of sati formed Dharma Sabha and petitioned the British not to legislate against sati. When reformers demanded education for girls, many protested that this would be disastrous for society. When reformers campaigned for widow remarriage, they were socially boycotted. When the so-called ‘lower caste’ children enrolled in schools, some so-called ‘upper caste’ children were withdrawn from the schools by their families. Peasant movements have often been brutally suppressed. More recently the social movements of erstwhile excluded groups like the Dalits have often invoked retaliatory action. Likewise proposals for extending reservation in educational institutions have led to counter movements opposing them. Social movements cannot change society easily. Since it goes against both entrenched interests and values, there is bound to be opposition and resistance. But over a period of time changes do take place.
While protest is the most visible form of collective action, a social movement also acts in other, equally important, ways. Social movement activists hold meetings to mobilise people around the issues that concern them. Such activities help *shared understanding*, and also prepare for a feeling of agreement or consensus about how to pursue the collective agenda. Social movements also chart out campaigns that include lobbying with the government, media and other important makers of public opinion. You will recall this discussion from chapter 3. Social movements also develop distinct modes of protest. This could be candle and torch light processions, use of black cloth, street theatres, songs, poetry. Gandhi adopted novel ways such as *ahimsa*, *satyagraha* and his use of the *charkha* in the freedom movement. Recall the innovative modes of protest such as picketing and the defying of the colonial ban on producing salt.

### Activity 8.3

Make a list of different social movements that you have heard or read of. What changes do they want to bring about? What changes do they want to prevent?

### The repertoire of satyagraha

The fusion of foreign power and capital was the focus of social protest during India’s nationalist struggle. Mahatma Gandhi wore *khadi*, hand-spun, hand-woven cloth, to support Indian cotton-growers, spinners and weavers whose livelihoods had been destroyed by the government policy of favouring mill-made cloth. The legendary *Dandi March* to make salt was a protest against British taxation policies that placed a huge burden on consumers of basic commodities in order to benefit the empire. Gandhi took items of everyday mass consumption like cloth and salt, and transformed them into symbols of resistance.
It is important to distinguish between social change in general and social movements. Social change is continuous and ongoing. The broad historical processes of social change are the sum total of countless individual and collective actions gathered across time and space. Social movements are directed towards some specific goals. It involves long and continuous social effort and action by people. To draw from our discussion in chapter 2 we can view sanskritisation and westernisation as social change and see the 19th century social reformers’ efforts to change society as social movements.

**Why the Study of Social Movements is Important for Sociology**

From the very beginning, the discipline of sociology has been interested in social movements. The French Revolution was the violent culmination of several movements aimed at overthrowing the monarchy and establishing ‘liberty, equality and fraternity’. In Britain, the industrial revolution was marked by great social upheaval. Recall our discussion on the emergence of sociology in the west in Book 1 NCERT class XI. Poor labourers and artisans who had left the countryside to find work in the cities protested against the inhuman living conditions into which they were forced. Food riots in England were often suppressed by the government. These protests were perceived by elites as a
major threat to the established order of society. Their anxiety about maintaining social order was reflected in the work of sociologist Emile Durkheim. Durkheim’s writings about the division of labour in society, forms of religious life, and even suicide, mirror his concern about how social structures enable social integration. Social movements were seen as forces that led to disorder.

Scholars influenced by the ideas of Karl Marx offered a different view of violent collective action. Historians like E. P. Thompson showed that the ‘crowd’ and the ‘mob’ were not made up of anarchic hooligans out to destroy society. Instead, they too had a ‘moral economy’. In other words they have their own shared understanding of right and wrong that informed their actions. Their research showed that poor people in urban areas had good reasons for protesting. They often resorted to public protest because they had no other way of expressing their anger and resentment against deprivation.

THEORIES OF SOCIAL MOVEMENTS

According to the theory of relative deprivation, social conflict arises when a social group feels that it is worse off than others around it. Such conflict is likely to result in successful collective protest. This theory emphasises the role of psychological factors such as resentment and rage in inciting social movements. The limitations of this theory are that while perceptions of deprivation may be a necessary condition for collective action, they are not a sufficient reason in themselves. All instances where people feel relatively deprived do not result in social movements. Can you think of any example where people do feel deprived but do not start or join a social movement to redress their grievance?

To mobilise collectively in a sustained and organised manner, grievances have to be discussed and analysed in order to arrive at a shared ideology and strategy. That is, there is no automatic causal relationship between relative deprivation and collective action. There are other factors such as leadership and organisation that are equally important.

Mancur Olson’s book The Logic of Collective Action argues that a social movement is an aggregation of rational individual actors pursuing their self-interest. A person will join a social movement only if s/he will gain something from it. S/he will participate only if the risks are less than the gains. Olson’s theory is based on the notion of the rational, utility-maximising individual. Do you think people always calculate individual costs and benefits before undertaking any action?
McCarthy and Zald's proposed resource mobilisation theory rejected Olson’s assumption that social movements are made up of individuals pursuing their self-interest. Instead, they argued that a social movement’s success depends on its ability to mobilise resources or means of different sorts. If a movement can muster resources such as leadership, organisational capacity, and communication facilities, and can use them within the available political opportunity structure, it is more likely to be effective. Critics argue that a social movement is not limited by existing resources. It can create resources such as new symbols and identities. As numerous poor people’s movements show, scarcity of resources need not be a constraint. Even with an initial limited material resources and organisational base, a movement can generate resources through the process of struggle. Think of examples from both the past and the contemporary period.

Social conflict does not automatically lead to collective action. For such action to take place, a group must consciously think or identify themselves as oppressed beings. There has to be an organisation, leadership, and a clear ideology. Often, however, social protest does not follow on these lines. People may have a clear idea of how they are exploited, but they are often unable to challenge this through overt political mobilisation and protest. In his book Weapons of the Weak, James Scott analysed the lives of peasants and labourers in Malaysia. Protest against injustice took the form of small acts such as being deliberately slow. These kinds of acts have been defined as everyday acts of resistance.

Studies on poor women in South Asia has shown that often they are forced to give their small savings to their husbands who demand it for their drinks. They then devised a way out by hiding their money in two places. When they were forced to give up their hard earned saving, they gave the money from of one of the hiding places. And thereby ensured the safety of the other saving.

Is this an act of resistance or a survival strategy, a coping mechanism? Discuss.

8.3 Types of Social Movements

One way of Classifying: Reformist, Redemptive, Revolutionary

There are different kinds of social movements. They can be classified as: (i) redemptive or transformative; (ii) reformist; and (iii) revolutionary. A redemptive social movement aims to bring about a change in the personal consciousness and actions of its individual members. For instance, people in the Ezhava community in Kerala were led by Narayana Guru to change their social practices. Reformist social movements strive to change the existing social
and political arrangements through gradual, incremental steps. The 1960s movement for the reorganisation of Indian states on the basis of language and the recent Right to Information campaign are examples of reformist movements. Revolutionary social movements attempt to radically transform social relations, often by capturing state power. The Bolshevik revolution in Russia that deposed the Tsar to create a communist state and the Naxalite movement in India that seeks to remove oppressive landlords and state officials can be described as revolutionary movements.

As you might discover when you try to classify a social movement in terms of this typology, most movements have a mix of redemptive, reformist and revolutionary elements. Or the orientation of a social movement may shift over time such that it starts off with, say, revolutionary objectives and becomes reformist. A movement may start from a phase of mass mobilisation and collective protest to become more institutionalised. Social scientists who study the life cycles of social movements call this a move towards ‘social movement organisations’.

How a social movement is perceived and classified is always a matter of interpretation. It differs from one section to another. For instance, what was a ‘mutiny’ or ‘rebellion’ for British colonial rulers in 1857 was ‘the first war of Independence’ for Indian nationalists. A mutiny is an act of defiance against legitimate authority, i.e., the British rule. A struggle for independence is a challenge to the very legitimacy of British rule. This shows how people attach different meanings to social movements.

**Another Way of Classifying: Old and New**

For much of the twentieth century social movements were class based such as working class movements and peasant movements or anti-colonial movements. While anti-colonial movements united entire people into national liberation struggles, class-based movements united classes to fight for their rights.

The most far-reaching social movements of the last century thus have been class-based or based on national liberation struggles. You have read in your history books about the workers’ movements in Europe that gave rise to the international communist movement. Besides bringing about the formation of communist and socialist states across the world, most notably in the Soviet Union, China, and Cuba, these movements also led to the reform of capitalism.

---

**Activity 8.5**

Find out about social movements such as the:
- Telangana struggle
- the Tebhaga movement
- the Swadhyaya Parivar movement
- the Santhal Hool
- the Ulgulan led by Birsa Munda
- the campaign against dowry deaths
- the movement to allow Dalits to enter temples
- the movement for separate statehood for Uttaranchal and Jharkhand
- the movement for widow remarriage in Bengal and Maharashtra and others
- any other social movement you have read about.

Can you classify these social movements in terms of the categories given above?

---
The creation of welfare states that protected workers' rights and offered universal education, health care and social security in the capitalist nations of Western Europe was partly due to political pressure created by the communist and socialist movements. The movement against colonialism has been as influential as the movement against capitalism. Since capitalism and colonialism have usually been inter-linked through forms of imperialism, social movements have simultaneously targeted both these forms of exploitation. That is, nationalist movements have mobilised against rule by a foreign power as well as against the dominance of foreign capital.

The decades after the Second World War witnessed the end of empire and the formation of new nation-states as a result of nationalist movements in India, Egypt, Indonesia, and many other countries. Since then, another wave of social movements occurred in the 1960s and early 1970s. This was the time of the war in Vietnam where forces led by the United States of America were involved in a bloody conflict in the former French colony against Communist guerrillas. In Europe, Paris was the nucleus of a vibrant students' movement that joined workers' parties in a series of strikes protesting against the war. Across the Atlantic, the United States of America was experiencing a surge of social protest. The civil rights movement led by Martin Luther King had been followed by the Black Power movement led by Malcolm X. The anti-war movement was joined by tens of thousands of students who were being compulsorily drafted by the government to go and fight in Vietnam. The women's movement and the environmental movement also gained strength during this time of social ferment.
It was difficult to classify the members of these so-called ‘new social movements’ as belonging to the same class or even nation. Rather than a shared class identity, participants felt that they shared identities as students, women, blacks, or environmentalists. How are the old social movements, often based on class related issues like the trade union or peasant movements different from the new social movements like the environmental or women or tribal movements?

You are already familiar with the many instances of trade union movements and workers’ struggles in chapter 5.

**Distinguishing the New Social Movement from the Old Social Movements**

We have already seen that the historical contexts were different. That was a period when nationalist movements were overthrowing colonial powers. And working class movements in the capitalist west were wresting better wages, better living conditions, social security, free schooling and health security from the state. That was also a period when socialist movements were establishing new kinds of states and societies. The old social movements clearly saw reorganisation of power relations as a central goal.

The old social movements functioned within the frame of political parties. The Indian National Congress led the Indian National Movement. The Communist Party of China led the Chinese Revolution. Today some believe that ‘old’ class-based political action led by trade unions and workers’ parties is on the decline. Others argued that in the affluent West with its welfare state, issues of class-based exploitation and inequality were no longer central concerns. So the ‘new’ social movements were not about changing the distribution of power in society but about quality-of-life issues such as having a clean environment.

In the old social movements, the role of political parties was central. Political scientist Rajni Kothari attributes the surge of social movements in India in the 1970s to people’s growing dissatisfaction with parliamentary democracy. Kothari argues that the institutions of the state have been captured by elites. Due to this, electoral representation by political parties is no longer an effective way for the poor to get their voices heard. People left out by the formal political system join social movements or non-party political formations in order to put pressure on the state from outside. Today, the broader term of civil society is used to refer to both old social movements represented by political parties and trade unions. And to new nongovernmental organisations, women’s groups, environmental groups and tribal activists.

As you read about the various dimensions of social change in India you would have been struck by the fact that globalisation has been re-shaping peoples’ lives in industry and agriculture, culture and media. Often firms are trans-national. Often legal arrangements that are binding are international such as the regulations of the World Trade Organisation (WTO). Environmental and
health risks, fears of nuclear warfare are global in nature. Not surprisingly therefore many of the new social movements are international in scope. What is significant, however, is that the old and new movements are working together in new alliances such as the World Social Forum that have been raising awareness about the hazards of globalisation.

**Can we apply the distinction between old and new social movements in the Indian context?**

India has experienced a whole array of social movements involving women, peasants, dalits, adivasis, and others. Can these movements be understood as ‘new social movements’? Gail Omvedt in her book *Reinventing Revolution* points out that concerns about social inequality and the unequal distribution of resources continue to be important elements in these movements. Peasant movements have mobilised for better prices for their produce and protested against the removal of agricultural subsidies. Dalit labourers have acted collectively to ensure that they are not exploited by upper-caste landowners and money-lenders. The women’s movement has worked on issues of gender discrimination in diverse spheres like the workplace and within the family.

At the same time, these new social movements are not just about ‘old’ issues of economic inequality. Nor are they organised along class lines alone. Identity politics, cultural anxieties and aspirations are essential elements in creating social movements and occur in ways that are difficult to trace to class-based inequality. Often, these social movements unite participants across class boundaries. For instance, the women’s movement includes urban, middle-class feminists as well as poor peasant women. The regional movements for separate statehood bring together different groups of people who do not share homogeneous class identities. In a social movement, questions of social inequality can occur alongside other, equally important, issues.

This will be clear when we discuss the Chipko movement later.

**8.4 Ecological Movements**

For much of the modern period the greatest emphasis has been laid on development. Over the decades there has been a great deal of concern about the unchecked use of natural resources and a model of development that creates new needs that further demands greater exploitation of the already depleted natural resources. This model of development has also been critiqued for assuming that all sections of people will be beneficiaries of development. Thus big dams displace people from their homes and sources of livelihood. Industries displace agriculturalists from their homes and livelihood. The impact of industrial pollution is yet another story. Here we take just one example of an ecological movement to examine the many issues that are interlinked in an ecological movement.
The Chipko Movement, an example of the ecological movement, in the Himalayan foothills is a good example of such intermingled interests and ideologies. According to Ramachandra Guha in his book, *Unquiet Woods*, villagers rallied together to save the oak and rhododendron forests near their villages. When government forest contractors came to cut down the trees, villagers, including large number of women, stepped forward to hug the trees to prevent their being felled. At stake was the question of villagers’ subsistence. All of them relied on the forest to get firewood, fodder and other daily necessities. This conflict placed the livelihood needs of poor villagers against the government’s desire to generate revenues from selling timber. The economy of subsistence was pitted against the economy of profit. Along with this issue of social inequality (villagers versus a government that represented commercial, capitalist interests), the Chipko Movement also raised the issue of ecological sustainability. Cutting down natural forests was a form of environmental destruction that had resulted in devastating floods and landslides in the region. For the villagers, these ‘red’ and ‘green’ issues were interlinked. While their survival depended on the survival of the forest, they also valued the forest for its own sake as a form of ecological wealth that benefits all. In addition, the Chipko Movement also expressed the resentment of hill villagers against a distant government headquartered in the plains that seemed indifferent and hostile to their concerns. So, concerns about economy, ecology and political representation underlay the Chipko Movement. Trees are necessary for the conservation of environment. Similarly, clean water is necessary for a healthy environment. In the light of this, the Government of India has recently, through the ‘Integraged Ganga Conservation Mission’ (*Namami Gange*) and *Swachh Bharat Abhiyan* imitated systematic efforts to create a balance, structure and quality in India’s ecology.
Chipko Movement

The unusually heavy monsoon of 1970 precipitated the most devastating flood in living memory. In the Alaknanda valley, water inundated 100 square kilometres of land, washed away 6 metal bridges and 10 kilometres of motor roads, 24 buses and several other vehicles; 366 houses collapsed and 500 acres of standing paddy crops were destroyed. The loss of human and bovine life was considerable.

...The 1970 floods mark a turning-point in the ecological history of the region. Villagers, who bore the brunt of the damage, were beginning to perceive the hitherto tenuous links between deforestation, landslides and floods. It was observed that some of the villages most affected by landslides lay directly below forests where felling operations had taken place....

...The villagers’ cause was taken up by the Dashauli Gram Swaraja Sangh (DGSS), a cooperative organisation based in Chamoli district.

...Despite these early protests, the government went ahead with the yearly auction of forests in November. One of the plots scheduled to be assigned was the Reni forest....

...The contractors’ men who were travelling to Reni from Joshimath stopped the bus shortly before Reni. Skirting the village, they made for the forest. A small girl who spied the workers with their implements rushed to Gaura Devi, the head of the village Mahila Mandal (Women’s Club). Gaura Devi quickly mobilised the other housewives and went to the forest. Pleading with the labourers not to start felling operations, the women initially met with abuse and threats. When the women refused to budge, the men were eventually forced to retire.

**Exercise for Box 8.5**

- Is this social movement raising ‘old’ issues of class-based inequality and resource distribution?
- Or is it raising other concerns such as ecological sustainability and the cultural rights of people?

In our current information age, social movements around the globe are able to join together in huge regional and international networks comprising non-governmental organisations, religious and humanitarian groups, human rights association, consumer protection advocates, environmental activists and others who campaign in the public interest. ...The enormous protests against the World Trade Organisation that took place in Seattle, for example, were organised in part through internet-based network.

**Exercise for Box 8.6**

Read the text given above and discuss how even social movements get globalised. How does technology help? How does it change the role social movements can play?
8.5 Class Based Movements

Peasant Movements

Peasant movements or agrarian struggles have taken place from pre-colonial days. The movements in the period between 1858 and 1914 tended to remain localised, disjointed and confined to particular grievances. Well-known are the Bengal revolt of 1859-62 against the indigo plantation system and the ‘Deccan riots’ of 1857 against moneylenders. Some of these issues continued into the following period, and under the leadership of Mahatma Gandhi became partially linked to the Independence movement. For instance, the Bardoli Satyagraha (1928, Surat District) a ‘non-tax’ campaign as part of the nationwide non-cooperative movement, a campaign of refusal to pay land revenue and the Champaran Satyagraha (1917-18) directed against indigo plantations. In the 1920s, protest movements against the forest policies of the British government and local rulers arose in certain regions. Recall our discussion on structural changes in Chapter 1.

Between 1920 and 1940 peasant organisations arose. The first organisation to be founded was the Bihar Provincial Kisan Sabha (1929) and in 1936 the All India Kisan Sabha. The peasants organised by the Sabhas demanded freedom from economic exploitation for peasants, workers and all other exploited classes. At the time of Independence we had the two most classical cases of peasant movements, namely the Tebhaga movement (1946-7) and the Telangana movement (1946-51). The first was a struggle of sharecroppers in Bengal in North Bihar for two thirds share of their produce instead of the customary half. It had the support of the Kisan Sabha and the Communist Party of India (CPI). The second, directed against the feudal conditions in the princely state of Hyderabad and was led by the CPI.

Certain issues which had dominated colonial times changed after independence. For land reforms, zamindari abolition, declining importance of land revenue and public credit system began to alter rural areas. The period after 1947 was characterised by two major social movements. The Naxalite struggle and the ‘new farmer’s movements.’ The Naxalite movement started from the region of Naxalbari (1967) in Bengal.

The central problem for peasants was land. You have a clear understanding of the sharp divisions within the agrarian structure in rural India from chapter 4. Boxes 1 and 2 provide two brief accounts of the movement.

Activity 8.7

Find out more about the Naxal Movement:
- The early years
- The current phase
- The issues
- The mode of protest

Discuss. Go back to chapter 4 and identify what could be the social causes responsible for the movement.
...the Siliguri subdivision peasants' conference proved to be a great success. The peasants, quickened and strengthened by their earlier militant struggles, looked forward expectantly. Faces deadened and dulled with the grinding routine of labour on the jotedars' fields in sun and rain glowed with hope and understanding. According to Kanu Sanyal's later claims, from March 1967 to April 1967, all the villagers were organised. From 15,000 to 20,000 peasants were enrolled as whole-time activists. Peasants’ committees were formed in every village and they were transformed into armed guards. They soon occupied land in the name of peasants’ committees, burnt all land records ‘which had been used to cheat them of their dues’, cancelled all hypothecary debts, passed death sentences on oppressive landlords, formed armed bands by looting guns from landlords, armed themselves with conventional weapons like bows, arrows and spears, and set up parallel administration to look after the villages...

The guerrilla movement was heralded by the forcible cutting of crops from the land of a rich landlord at Garudabhadr, near Bodhapadu in the plains area on 24 November 1968. More significant was the action in the hill tracts the next day, when in Pedagotili village of the Parvatipuram Agency area, about 250 Girijans from several villages armed with bows, arrows and spears... raided the house of a ...landlord cum moneylender... and took possession of his hoarded paddy, rice, other food grains and property worth about Rs. 20,000. They also seized documents.

Many of the agrarian problems persist in contemporary India. Chapter 4 has discussed these in detail. The Naxal movement is a growing force even today.

The so called ‘new farmer’s movements began in the 1970s in Punjab and Tamil Nadu. These movements were regionally organised, were non-party, and involved farmers rather than peasants. (farmers are said to be market-involved as both commodity producers and purchasers) The basic ideology of the movement was strongly anti-state and anti-urban. The focus of demand were ‘price and related issues’ (for example price procurement, remunerative prices, prices for agricultural inputs, taxation, non-repayment of loans). Novel methods of agitation were used: blocking of roads and railways, refusing politicians and bureaucrats entry to villages, and so on. It has been argued that the farmers’ movements have broadened their agenda and ideology and include environment and women’s issues. Therefore, they can be seen as a part of the worldwide ‘new social movements’.
WORKERS’ MOVEMENTS

Factory production began in India in the early part of the 1860s. You will recall our discussion on the specific character of industrialisation in the colonial period. The general pattern of trade set up by the colonial regime was one under which raw materials were procured from India and goods manufactured in the United Kingdom were marketed in the colony. These factories were, thus established in the port towns of Calcutta (Kolkata) and Bombay (Mumbai). Later factories were also set up in Madras (Chennai). Tea plantations in Assam were established as early as 1839.

In the early stages of colonialism, labour was very cheap as the colonial government did not regulate either wages or working conditions. You will remember the manner in which the colonial government ensured supply of labour in the tea plantations (Chapter 1).

Though trade unions emerged later, workers did protest. Their actions then were, however, more spontaneous than sustained. Some of the nationalist leaders also drew in the workers into the anti colonial movement. The war led to the expansion of industries in the country but it also brought a great deal of misery to the poor. There were food shortage and sharp increase in prices. There were waves of strikes in the textile mills in Bombay. In September and October 1917 there were around 30 recorded strikes. Jute workers in Calcutta struck work. In Madras, the workers of Buchingham and Carnatic Mills (Binny’s) struck work for increased wages. Textile workers in Ahmedabad struck work for increase in wages by 50 per cent. (Bhowmick 2004)

The first trade union was established in April 1918 in Madras by B.P. Wadia, a social worker and member of the Theosophical Society. During the same year, Mahatma Gandhi founded the Textile Labour Association (TLA). In 1920 the All India Trade Union Congress (AITUC) was formed in Bombay. The AITUC was a broad-based organisation involving diverse ideologies. The main ideological groups were the communists led by S.A. Dange and M.N. Roy, the moderates led by M. Joshi and V.V. Giri and the nationalists which involved people like Lala Lajpat Rai and Jawaharlal Nehru.

The formation of the AITUC made the colonial government more cautious in dealing with labour. It attempted to grant workers some concessions in order to contain unrest. In 1922 the government passed the fourth Factories Act which reduced the working day to 10 hours. And in 1926, the Trade Unions Act was passed, which provided for registration of trade unions and proposed some regulations. By the mid 1920s, the AITUC had nearly 200 unions affiliated to it and its membership stood at around 250,000.

During the last few years of British rule the communists gained considerable control over the AITUC. The Indian National Congress chose to form another union called the Indian National Trade Union Congress (INTUC) in May 1947. The split in the AITUC in 1947 paved the way for further splits on the line of
political parties. Apart from the working class movement being divided on the lines of political parties at the national level, regional parties too started to form their own unions from the late 1960s.

In 1966-67 the economy suffered a major recession which led to a decrease in production and consequently employment. There was a general unrest. In 1974 there was a major railway workers’ strike. The confrontation between the state and trade unions became acute. During the Emergency in 1975-77 the government curbed all trade union activities. This again was short lived. The workers’ movement was very much part of the wider struggle for civil liberties.

In the contemporary context of globalisation you have read about the changes affecting labour. The challenges before the trade unions are also of a new nature. You need to go back to chapter 5 and 6 to understand these.

**Activity 8.8**

Follow the news regularly and collect information on the issues that trade unions are taking up.

Discuss in the context of globalisation
8.6 Caste Based Movements

The Dalit Movement

The sun of self-respect has burst into flame-
Let it burn up these castes!
Smash, break, destroy
These walls of hatred.
Crush to smithereens this eons-old school of blindness,
Rise, O people!

Social movements of Dalits show a particular character. The movements cannot be explained satisfactorily by reference to economic exploitations alone or political oppression, although these dimensions are important. This is a struggle for recognition as fellow human beings. It is a struggle for self-confidence and a space for self-determination. It is a struggle for abolishment of stigmatisation, that untouchability implied. It has been called a struggle to be touched.

The word Dalit is commonly used in Marathi, Hindi, Gujarati and many other Indian languages, meaning the poor and oppressed persons. It was first used in the new context in Marathi by neo-Buddhist activists, the followers of Babasaheb Ambedkar in the early 1970s. It refers to those who have been broken, ground down by those above them in a deliberate way. There is, in the word itself, inherent denial of pollution, karma and justified caste hierarchy.

There has not been a single, unified Dalit movement in the country now or in the past. Different movements have highlighted different issues related to Dalits, around different ideologies. However, all of them assert a Dalit identity though the meaning may not be identical or precise for everyone. Notwithstanding differences in the nature of Dalit movements and the meaning of identity, there has been a common quest for equality, self-dignity and eradication of untouchability. (Shah 2001:194) This can be seen in the Satnami Movement of the Chamars in the Chattisgarh plains in eastern MP, Adi Dharma Movement in Punjab, the Mahar Movement in Maharashtra, the socio-political mobilisation among the Jatavas of Agra and the Anti Brahman Movement in south India.

In the contemporary period the Dalit movement has unquestionably acquired a place in the public sphere that cannot be ignored. This has been accompanied by a growing body of Dalit literature.
Dalit literature is squarely opposed to the Chaturvarna system and caste hierarchy which it considers as responsible for crushing the creativity and very existence of lower castes. Dalit writers are insistent on using their own imageries and expressions rooted in their own experiences and perceptions. Many felt that the high-flown social imageries of mainstream society would hide the truth rather than reveal it. Dalit literature gives a call for social and cultural revolt. While some emphasise the cultural struggle for dignity and identity, others also bring in the structural features of society including the economic dimensions.

Sociologists, attempts to classify Dalit movements have led them to believe that they belong to all the types, namely reformative, redemptive, revolutionary.

...the anti-caste movement which began in the 19th century under the inspiration of Jotiba Phule and was carried out in the 1920s by the non-Brahmin movements in Maharashtra and Tamil Nadu and then developed under the leadership of Dr. Ambedkar had characteristics of all types. At its best it was revolutionary in terms of society and redemptive in terms of individuals. In partial context, the ‘post Ambedkar Dalit movement’ has had revolutionary practice. It has provided alternative ways of living, at some points limited and at some points radical and all-encompassing, ranging from changes in behaviour such as giving up eating beef to religious conversion. It has focussed on changes in the entire society, from radical revolutionary goal of abolishing caste oppression and economic exploitation to the limited goals of providing scope for members of Scheduled Caste to achieve social mobility.

But on the whole...this movement has been a reformist movement. It has mobilized along caste lines, but only made half hearted efforts to destroy caste; it has attempted and achieved some real though limited societal changes with gains especially for the educated sections among Dalits, but it has failed to transform society sufficiently to raise the general mass from what is still among the most excruciating poverty in the world.
The emergence of backward castes/classes as political entities has occurred both in the colonial and post-colonial contexts. The colonial state often distributed patronage on the basis of caste. It made sense, therefore, for people to stay within their caste for social and political identity in institutional life. It also influenced similarly placed caste groups to unite themselves and to form what has been termed a 'horizontal stretch'. Caste, thus, began to lose its ritual content and become more and more secularised for political mobilisation (recall the discussion on secularisation in Chapter 2).

The term 'Backward Classes' has been in use in different parts of the country since the late 19th Century. It began to be used more widely in Madras presidency since 1872, in the princely state of Mysore since 1918, and in Bombay presidency since 1925. From the 1920s, a number of organisations united around the issue of caste sprang up in different parts of the country. These included the United Provinces Hindu Backward Classes League, All-India Backward Classes Federation, All India Backward Classes League. In 1954, 88 organisations were counted working for the Backward Classes.

The increasing visibility of both Dalits and other backwards classes has led to a feeling among sections of the upper caste that they are being given short shrift. The government, they feel, does not pay any heed to them because they are numerically not significant enough. As sociologists, we need to recognise that such a ‘feeling’ does exist and then we need to scrutinise to what extent such an impression is grounded on empirical facts. We also need to ask why earlier generations from the so called ‘upper castes’ did not think of ‘caste’ as a living reality of modern India? Box 8.12 provides an obvious sociological explanation.

By and large, when compared to the situation prevailing before Independence, the condition of all social groups, including the lowest caste and tribes, has improved today. But by how much has it improved? How have the lowest castes/tribes fared in comparison to the rest of the population? It is true that in the early part of the 21st century, the variety of occupations and professions among all caste groups is much wider than it was today. However, this does not change the massive social reality that the overwhelming majority of those in the ‘highest’ or most preferred occupations are from the upper castes, while the vast majority of those in the
manial and despised occupations belong to the lowest castes. Issues of discrimination and exclusion have been discussed at some length in Book 1.

8.7 THE TRIBAL MOVEMENTS

Different tribal groups spread across the country may share common issues. But the distinctions between them are equally significant. Many of the tribal movements have been largely located in the so-called ‘tribal belt’ in middle India, such as the Santhals, Hos, Oraons, Mudas in Chota Nagpur and the Santhal Parganas. The region constitutes the main part of what has come to be called Jharkhand. We will not be able to go into any detailed account of the different movements. We take Jharkhand as an example of a tribal movement with a history that goes back a hundred years. We also briefly touch on the specificity of the tribal movements in the North East but fail to deal comprehensively the many differences that exist between one tribal movement and another within the region.

JHARKHAND

Jharkhand is one of the newly formed states of India, carved out of south Bihar in the year 2000. Behind the formation of this state lies more than a century of resistance. The social movement for Jharkhand had a charismatic leader in Birsa Munda, an adivasi who led a major uprising against the British. After his death, Birsa became an important icon of the movement. Stories and songs about him can be found all over Jharkhand. The memory of Birsa’s struggle was also kept alive by writing. Christian missionaries working in south Bihar were responsible for spreading literacy in the area. Literate adivasis began to research and write about their history and myths. They documented and
disseminated information about tribal customs and cultural practices. This helped create a unified ethnic consciousness and a shared identity as Jharkhandis.

Literate adivasis were also in a position to get government jobs so that, over time, a middle-class adivasi intellectual leadership emerged that formulated the demand for a separate state and lobbied for it in India and abroad. Within south Bihar, adivasis shared a common hatred of dikus – migrant traders and money-lenders who had settled in the area and grabbed its wealth, impoverishing the original residents. Most of the benefits from the mining and industrial projects in this mineral-rich region had gone to dikus even as adivasi lands had been alienated. Adivasi experiences of marginalisation and their sense of injustice were mobilised to create a shared Jharkhandi identity and inspire collective action that eventually led to the formation of a separate state.

The issues against which the leaders of the movement in Jharkand agitated were:

- acquisition of land for large irrigation projects and firing ranges;
- survey and settlement operations, which were held up, camps closed down, etc.
- collection of loans, rent and cooperative dues, which were resisted;
- nationalisation of forest produce which they boycotted

**The North East**

The process of state formation initiated by the Indian government following the attainment of independence generated disquieting trends in all the major hill districts in the region. Conscious of their distinct identity and traditional autonomy the tribes were unsure of being incorporated within the administrative machinery of Assam.

The rise of ethnicity in the region is thus a response to cope with the new situation which developed as a consequence of the tribe’s contact with a powerful alien system. Long isolated from the Indian mainstream the tribes were able to maintain their own worldview and social and cultural institutions with little external influence. ...While the earlier phase showed a tendency towards secessionism, this trend has been replaced by a search for autonomy within the framework of the Indian Constitution. *(Nongbri 2003: 115)*

One of the key issues that bind tribal movements from different parts of the country is the alienation of tribals from forest lands. In this sense ecological issues are central to tribal movements. Just as cultural issues of identity and economic issues such as inequality are. This brings us back to the question about the blurring of old and new social movements in India.
8.8 The Women’s Movement

The 19th Century Social Reform Movements and Early Women’s Organisations

You are already familiar with the 19th century social reform movements that raised various issues concerning women. Chapter 2 had dealt with it as did the earlier book. The early 20th century saw the growth of women’s organisations at the national and the local level. The Women’s India Association (WIA) (1917), All India Women’s Conference (AIWC) (1926) National Council for Women in India (NCWI) (1925) are ready names that we can mention. While many of them began with a limited focus, their scope extended over time. For instance, the AIWC began with the idea that ‘women’s welfare’ and ‘politics’ were mutually exclusive. Few years later the Presidential address stated, “…Can the Indian man or woman be free if India be a slave? How can we remain dumb about national freedom, the very basis of all great reforms?” (Chaudhuri 1993: 149)

It can be argued that this period of activity did not constitute a social movement. It can be argued otherwise too. Let us recall some of the features that characterise social movements. It did have organisations, ideology, leadership, a shared understanding and the aim of bringing about changes on a public issue. What they succeeded together was to create an atmosphere where the women’s question could not be ignored.

Agrarian Struggles and Revolts

It is often assumed that only middle class educated women are involved in social movements. Part of the struggle has been to remember the forgotten history of women’s participation. Women participated along with men in struggles and revolts originating in tribal and rural areas in the colonial period. The Tebhaga movement in Bengal, the Telangana arms struggle from the erstwhile Nizam’s rule, and the Warli tribal’s revolt against bondage in Maharashtra are some examples.

Post-1947

An issue that is often raised is that if there was an active women’s movement before 1947, whatever happened afterwards. One explanation has been that
many of the women activists who were also involved in the nationalist movement got involved in the nation building task. Others cite the trauma of Partition responsible for the lull.

In the mid-1970s, there was a renewal of the women’s movement in India. Some call it the second phase of the Indian women’s movement. While many of the concerns remained the same that there were changes both in terms of organisational strategy, as well as, ideologies. There was the growth of what is termed as the autonomous women’s movements. The term ‘autonomy’ referred to the fact that they were ‘autonomous’ or independent from political parties as distinct from those women’s organisations that had links with political parties. It was felt that political parties tended to marginalise issues of women.

Apart from organisational changes, there were new issues that were focussed upon. For instance, violence against women. Over the years, there have been numerous campaigns that have been taken up. You may have noticed that application for school forms have both father’s and mother’s names. This was not always true. Likewise, important legal changes have taken place thanks to the campaign by the women’s movement. Issues of land rights, employment have been fought alongside rights against sexual harassment and dowry.

There has been a recognition too that while all women are in some way disadvantaged vis-a-vis men, all women do not suffer the same level or kind of discrimination. The concerns of the educated middle class woman is different from the peasant woman, just as the concern of the Dalit woman is different from the ‘upper caste’ woman. Let us take the example of violence.

There has also been greater recognition that both men and women are constrained by the dominant gender identities. For instance, men in patriarchal societies feel they must be strong and successful. It is not manly to express oneself emotionally. A gender-just society would allow both men and women to be free. This of course rests on the idea that for true freedom to grow and develop, injustices of all kind have to end. The idea of gender-just society is based upon two important factors — educated women with multiple roles and improved sex
In the face of widespread unemployment, ecological degradation, and rampant poverty, a new ferment of political action began in the country. In some cases, the struggles were launched from party fronts or from joint fronts of coalitions of parties. An example of the latter kind of action is provided by the Anti Price Rise Movement of Mumbai and Gujarat in the late 60s.

During the early 70s, in crisis-ridden Bihar, a massive upsurge of students... supported Jayaprakash Narayan’s call for a ‘Total Revolution’... A large number of questions about power structures was raised, which included many about women — questions about family, work, distribution and family violence, unequal access to resources enjoyed by men and women, issues of male-female relationship, and women’s sexuality.

The 1970s also witnessed the emergence of the ‘autonomous’ women’s movement. During the mid–1970s, many educated women took to radical, active politics, and simultaneously promoted an analysis of women’s issues. Groups of women came together in many cities. Among the incidents that played catalytic roles in crystallising these meetings into organisational efforts were the Mathura rape case (1978) and the Maya Tyagi rape case (1980). Both were cases of custodial rape by the police, and led to nationwide protest movements...

An analysis of the practices of violence against women by caste would reveal that while the incidence of dowry deaths and violent controls and regulations on the mobility and sexuality by the family are frequent among the dominant upper castes. Dalit women are more likely to face the collective and public threat of rape, sexual assault and physical violence at the workplace and in public.

**Exercise for Box 8.14**

- Think what other kinds of difference would exist between one section of women and another.
- Would there still be something common for all women as women? Discuss

ratio. The programme of the Government of India, Beti Bachao, Beti Padhao Yojana is an important effort in the actualisation of a gender-just society.

**Conclusion**

As we reach the end of the book, it is perhaps relevant to go back to where we began in our first sociology book in Class XI. We had begun by discussing the dialectical relationship between the individual and the society. Social movements perhaps best shows this relationship. They arise because individuals and social groups seek to change their conditions. Thereby, they change both themselves and the society.
1. Imagine a society where there has been no social movement. Discuss. You can also describe how you imagine such a society to be.

2. Write short notes on:
   - Women’s Movement
   - Tribal Movements

3. In India it is difficult to make a clear distinction between the old and new social movements. Discuss.

4. Environmental movements often also contain economic and identity issues. Discuss.

5. Distinguish between peasant and New Farmer’s movements.
